Portland, Maine 04101
(207) 772-2891

Project 131.06099
May 4, 2015

EXECUTIVE SUMMARY

The following report presents the findings of a Phase I Environmental Site Assessment (ESA) performed by Ransom Consulting Inc. (Ransom) for the property identified as LeBlanc Cleaners, located at 10 Lafayette Street in the City of Lewiston, Androscoggin County, Maine (the "Site"). This Phase I ESA was performed in accordance with the requirements of ASTM International Designation: E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, which meets the requirements of the United States Environmental Protection Agency (U.S. EPA) All Appropriate Inquiry (AAI), 40 CFR Part 312. The Phase I ESA included the completion of a Water Supply Well Search and a Vapor Encroachment Assessment. The purpose of this Phase I ESA was to document the environmental history of the Site, provide our professional opinion regarding evidence of *recognized environmental conditions (RECs)* in connection with the Site, identify nearby sensitive receptors, and evaluate the potential for the receptors to be impacted by contaminants which may be associated with the Site.

Information obtained during this ESA indicates that the Site was developed with a wagon repair shop, steam dye facility, and dry cleaning operation circa 1914. The main Site building with the more current dry cleaning operations was constructed on the Site circa 1955. At that time, the Site operated one dry cleaning unit which utilized tetrachloroethene or "Perc" as the primary dry cleaning solvent. According to the property owner, the original dry cleaning machine was vented to the exterior on the western side of the Site building. The original dry cleaning unit and associated vent pipe remain on the Site but have not operated since the early 1970's. An additional Renzacci dry cleaning unit that was in use since the 1970's until 2014 utilized Perc throughout its operations. Dry cleaning operations ceased in November 2014, and used filters, pre filter lint, and spent solvents from the Renzacci dry cleaning machine have yet to be disposed of. Significant staining was noted under this dry cleaning unit as well as throughout the Site building, including some staining in the concrete floor under the drums that have historically been used for hazardous waste storage. Previously used filters, spent solvents, and waste Perc were reportedly stored on the northern side of the building and disposed of by Safety Kleen throughout dry cleaning operations. The Site reconnaissance performed as part of this ESA observed empty drums and substance containers on the Site, with staining and substance residue noted on or in the vicinity of the containers, dry cleaning units, and wet-washing units.

The Site is developed with a brick-supported single-story commercial building constructed on a concrete slab. The current and former dry cleaner units were located along the northwestern wall of the main Site building between 1955 and 2014. According to Sanborn Maps dating back to the early 1900's, historical dry cleaning operations took place in the current boiler room. Mr. LeBlanc, the Site owner, had no information regarding operations that took place prior to 1955 or in the boiler room section of the building. According to Mr. LeBlanc, dry cleaning chemicals have been stored in the northern portion of the Site building since 1955.

A total of five vent pipes and two fill pipes are located on the property. The fill pipes lead to two 275-gallon heating oil storage tanks. Mr. LeBlanc was not aware of the presence of underground storage tanks at the Site. However, according to historical Sanborn Maps, underground storage tanks were located on the Site between 1914 and 1950. No records regarding tank registration, installation, inspections, or closure of the USTs were provided or identified during this assessment. The Site building is provided with municipal sewer and water services. According to the Lewiston Sewer & Water District, the sewer service discharges to the sewer main located on Lafayette Street. Two floor drains are located

within the northern and eastern section of the Site building, and one additional floor drain is located in the boiler room. The discharge locations of the floor drains could not be confirmed.

The Site is located in a mixed use residential and commercial area. Commercial properties are primarily located to the north and south of the Site, along Sabattus Street and Campus Avenue. Residential properties adjoin the property to the northeast, east, south, and southwest of the Site, along Lafayette Street. A water supply well search identified no private water supply wells within 2,500 feet of the Site.

Ransom contracted Environmental Data Resources (EDR) to conduct a search of federal and state databases containing known and suspected sites of environmental contamination. The Site was identified by EDR under databases including Resource Conservation and Recovery Act (RCRA) Conditionally Exempt Small Quantity Generator (RCRA-CESQG), Facility Index System/Facility Registry System (FINDS), EDR United States Historical Cleaners, United States Aerometric Information Retrieval System (AIRS), and Underground Injection Control (UIC) Site. According to information contained in the EDR report, the Site was identified as a U.S. EPA Hazardous Waste Site for disposal of small quantities of halogenated solvent materials associated with the former dry cleaning operation, including tetrachloroethylene. Several violations were reported in connection with the Site's listing as a RCRA-CESQG.

As part of the Phase I ESA, a Vapor Encroachment Assessment (VEA) was performed in general accordance with American Society for Testing and Materials (ASTM) International Standard E2600-10. Based on the operation of the Site property as a dry cleaning facility using "Perc" from at least 1955 until 2014, a Vapor Encroachment Condition (VEC) cannot be ruled out. If contaminants have impacted subsurface conditions at the Site, these contaminants would have the potential to migrate in soil vapor to surrounding properties through preferential pathways such as the municipal utility trenches. These contaminants could then impact indoor air conditions through vapor intrusion to surrounding structures.

In conformance with the scope and limitations of ASTM Standard Practice E 1527-05 and U.S. EPA AAI (40 CFR Part 312), Ransom has completed a Phase I ESA for the Site identified by the City of Lewiston Assessor's Office as Tax Map 173, Lot 19, which corresponds to 10 Lafayette Street, City of Lewiston, Androscoggin County, Maine. The Phase I ESA included a Water Supply Well Search and a Vapor Encroachment Assessment in general accordance with ASTM Standard E2600-10. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. This assessment has revealed the following *recognized environmental conditions* (RECs) in connection with the Site:

1. The Site was historically operated as a dry cleaning facility using the chemical tetrachloroethene or "Perc" as the primary dry cleaning solvent. Staining observed on the concrete slab floor throughout the Site building suggests that Perc may have been released due to leaking machinery or inadvertent spillage. Based on the chemical characteristics of Perc, and the condition of the concrete slab floor, these releases have the potential to have impacted soil, groundwater, and/or soil vapor conditions at the Site. Perc-containing condensate may also have been discharged to the surface of the Site as a result of ventilation from the historical dry cleaning machine(s).
2. Several underground storage tanks were identified on historical maps in the area of the boiler room. Although the tanks were identified as "gas tanks" on the historical maps, the contents of these tanks is unknown. Based on the historical use of the Site, the tanks likely contained fuel oil and/or dry cleaning chemicals. No records regarding tank

registration, installation, inspections, closure records, or knowledge from the Site owner were provided or identified during this assessment. Furthermore, it is not clear if these tanks have been removed from the Site. Unknown or unreported releases from these former tanks have the potential to have impacted the environmental condition of the Site.

3. Three floor drains were observed in connection with the Site building. The discharge location of these floor drains could not be confirmed. The environmental conditions of the Site have the potential to have been impacted as a result of leaks or releases of dry cleaning chemicals or petroleum products in connection with the floor drains.
4. A vapor encroachment condition for surrounding properties cannot be ruled out without additional investigation. Surrounding properties have the potential to be impacted by contaminants associated with the Site, if such contaminants have been released to the environment.

Based on the findings of this assessment, it is Ransom's opinion that additional investigation is warranted to address the above-stated RECs, document current Site conditions in relation to current regulatory clean up guidelines, and evaluate the potential for contaminants from the Site to have migrated to off-site properties. Ransom recommends that a Phase II ESA be implemented to determine if a release of hazardous substances has occurred at the Site, and to evaluate current soil, groundwater, and soil vapor conditions at the Site. Findings from the additional investigation(s) should be used to evaluate potential health and environmental risks to the Site and surrounding area, and identify whether remediation or mitigation measures are necessary to eliminate these potential health and environmental risks.

1.0 INTRODUCTION

The following report presents the findings of a Phase I Environmental Site Assessment (ESA) performed by Ransom Consulting Inc. (Ransom) for the property identified as LeBlanc Cleaners, located at 10 Lafayette Street in the City of Lewiston, Androscoggin County, Maine (the “Site”). The Phase I ESA was prepared for the Maine Department of Environmental Protection (MEDEP) Uncontrolled Sites Program as part of the Dry Cleaner Initiative study. The general location of the Site is shown on the Site Location Map (Figure 1).

1.1 Purpose

The purpose of this Phase I ESA was to assess the environmental condition of the Site by performing “all appropriate inquiry” into the previous ownership and uses of the Site consistent with good commercial or customary practice, taking into account commonly known and reasonably ascertainable information. The goal of the assessment was to identify “recognized environmental conditions” (RECs) in connection with the Site. The term RECs means:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

The term REC includes both controlled RECs (CRECs) and historical RECs (HRECs) as defined below:

The term CRECs means:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

The term HRECs means:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

By performing a Phase I ESA of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products, a user satisfies one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability.

In this case, the Phase I ESA was not commissioned in conjunction with a property transaction, but was performed to enhance the user’s understanding of the current and historical Site uses, Site and surrounding property features, and potential environmental receptors in the vicinity of the Site.

1.2 Scope of Work

This Phase I ESA was performed in accordance with the requirements of American Society for Testing and Materials (ASTM) International Designation: E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, 2013* (ASTM Standard Practice) and United States Environmental Protection Agency (U.S. EPA) All Appropriate Inquiry (AAI), 40 CFR Part 312. The ASTM Standard Practice was modified to address the purpose stated above, and included the completion of the following tasks:

1. Review municipal records and search state and federal environmental databases for sites or conditions of environmental concern;
2. Review historical land use records to evaluate past use of the Site and adjoining properties;
3. Perform a site reconnaissance to observe current conditions of the Site and the general land use of surrounding properties;
4. Conduct interviews with past and present owners, operators, and occupants of the Site.
5. Identify water supply wells within a 2,500 foot radius of the Site; and
6. Conduct a Vapor Encroachment Assessment to identify potential contaminant migration pathways and exposure point locations for contaminants which may be associated with the Site.

1.3 Significant Assumptions

No significant assumptions were made during the performance of this Phase I ESA.

1.4 Limitations, Exceptions, and Deviations

Along with the limitations set forth in various sections of the ASTM Standard Practice E 1527-13 protocol, the accuracy and completeness of this report is limited by the following:

1. Access Limitations—None
2. Physical Obstructions to Observations— Large portions of the grounds at the Site were covered by snow and ice, which limited observation of ground surfaces at the Site. However, based on the information presented throughout this report, these physical obstructions are not anticipated to limit Ransom's ability to identify RECs in connection with the Site.
3. Outstanding Information Requests— None
4. Historical Data Source Failure—Reasonably ascertainable historical information sources researched in this assessment allowed uses of the Site to be traced from the present back to circa 1914. At that time, the Site was developed with a wagon repair shop, a steam-

dye facility, and dry cleaners. This post-dates the property's first developed use, and represents Historical Data Failure as defined by ASTM 1527-13. However, based on the information presented throughout this report, the Historical Data Failure is not anticipated to limit Ransom's ability to identify RECs in connection with the Site.

5. Exceptions or Deviations—None

6. Other—None

The findings provided by Ransom in this report are based solely on the information reported in this document. Should additional information become available in the future, this information can be reviewed by Ransom and the findings presented herein may be modified as a result of the review. It should be noted that information obtained from state and local agencies is not necessarily all-inclusive and that files may have been reviewed and purged by officials prior to review by the public.

1.5 Special Terms and Conditions

This Phase I ESA was conducted in accordance with Ransom's contract with the MEDEP dated March 24, 2015.

1.6 User Reliance

The services and the contents of any project reports and associated documents provided to the client by Ransom are solely for the benefit of MEDEP, their affiliates and subsidiaries and their successors, assigns, and grantees. Reliance or any use of this report by anyone other than MEDEP, for whom it was prepared, is prohibited. Reliance or use by any such third party without explicit authorization in the report does not make said third party a third party beneficiary to Ransom's contract with MEDEP. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

2.0 PROJECT LOCATION/DESCRIPTION

2.1 Location and Legal Description

The Site consists of rectangular-shaped parcel of land encompassing approximately 0.24 acres located on Lafayette Street, in the City of Lewiston, Androscoggin County, Maine. The Site is identified by the City of Lewiston Assessor's Office as Tax Map 173, Lot 19, which corresponds to 10 Lafayette Street. Refer to Figures 1 and 2, Site Location Map and Site Plan, for the layout of the Site and adjoining properties.

2.2 Site and Vicinity Characteristics

The Site is located in a mixed-use residential and commercial neighborhood in downtown Lewiston. The Site is bordered to the north and west by St. Mary's Hospital and St. Mary's Medical Center, to the northeast by a residential property, to the southeast by Lafayette Street. Properties to the south and east of the Site, along Lafayette Street, are residential. Based on the building construction observed, these residential units are presumed to be constructed with full or partial basements.

2.3 Current Site Use

The Site building is in the process of being vacated, and was formerly used as a dry cleaning facility. According to the current property owner, dry cleaning services have been performed at the Site since the construction of the building in 1955 and ceased in November 2014.

2.4 Description of Structures, Roads, Other Improvements on the Property

The Site is currently developed with a brick building constructed on a concrete slab-on-grade foundation with a flat, steel roof (main operations Site building). The main operations Site building was constructed circa 1955 and encompasses a footprint of approximately 5,292 square feet. The boiler room section of the main Site building was constructed in the early 1900's. The main operations Site building includes the boiler room, a dry-cleaning operations room, a bathroom, an office, and a reception area. A rectangular-shaped storage shed is located on the western portion of the Site, constructed with wood floors and metal walls. The storage shed was constructed in 1959 and encompasses a footprint of 972 square feet.

The boiler room on the western section of the Site contains two 275-gallon oil above-ground storage tanks (AST), a boiler unit, and an air compressor unit. The AST contains heating oil for the space furnace to heat the building and heating oil for the boiler units which provided steam formerly used by the dry cleaning and drying units.

The dry-cleaning section of the Site building has concrete floors except for in the reception area, where 12-inch vinyl floor tiles were placed over the concrete floor. The office space in this section of the building is carpeted. It is possible that the floor tiles and/or carpet may be covering certain features of the original floors, such as stained areas. The dry cleaning room has a ceiling-mounted oil-fired space heater as well as an air compressor located on the southeastern wall.

According to Mr. LeBlanc, the Site has been serviced by municipal sewer and water since the construction of the main operations building. The municipal water and sewer service connect the Site building to a sewer main and water line located on Lafayette Street. Site features are shown on Figure 2.

2.5 Physical Setting

2.5.1 Topography

The topography of the Site has been graded to be generally flat. The topography in the area surrounding the Site generally slopes downward to the north, towards the Jepson Brook. Based on the Lewiston, Maine United States Geological Survey (USGS) Quadrangle map, the general elevation of the Site is approximately 248 feet above mean sea level, as referenced to the National Geodetic Vertical Datum (NGVD).

2.5.2 Soils/Geology

According to the United States Department of Agriculture (USDA) Soil Conservation Service (SCS), soils at the Site and in the immediate vicinity of the Site are classified as Hartland. Hartland soil generally consists of very fine sandy loam. The hydrologic group is categorized as group B with moderate infiltration rates. Soils are moderately well to well-drained with moderately coarse textures. The *1985 Surficial Geologic Map of Maine* identifies surficial soils as glacial till, which is generally characterized as a heterogeneous mixture of sand, silt, clay, and gravel.

The Environmental Data Resources (EDR) Report indicates that the Site and surrounding areas are underlain by rocks Silurian in age, consisting of Eugeosynclinal deposit. According to the *1985 Bedrock Geologic Map of Maine*, the rocks in the area are gneiss, schist, and slate. Ransom did not observe bedrock outcrops on the Site during the reconnaissance.

2.5.3 Surface Water Bodies/Floodplains

The Jepson Brook is located approximately 1,000 feet to the northeast of the Site. The Jepson Brook discharges into the Androscoggin River, located approximately one mile west of the Site. Based on the Androscoggin, Maine National Flood Insurance Program Map, the Site property is not located within a 100 or 500-year flood zone.

2.5.4 Hydrogeology

According to the Maine Geological Survey, Significant Sand and Gravel Aquifer Map for the Lewiston Quadrangle, the Site appears to be located within same watershed as the Jepson Brook (MGS, 1999). Based on the regional topography, the localized groundwater flow is presumed to be generally to the north/northeast, towards the Jepson Brook. It should be noted that groundwater flow direction at the Site cannot be confirmed without a groundwater elevation survey. Shallow groundwater flow may also be influenced by underground utilities, heterogeneous subsurface soil strata, and/or other subsurface structures, which may act as preferred pathways of flow.

3.0 USER PROVIDED INFORMATION

The current ASTM standard for Phase I ESAs requires that a “User Questionnaire” be completed by the user of the report. In accordance with the ASTM standard, Mr. Fred LeBlanc of the LeBlanc Cleaners completed the User Questionnaire. A copy of the User Questionnaire is included in Appendix B. The following provides a summary of the information provided in the User Questionnaire.

3.1 Title Records

Title records in connection with the Site were not provided by Mr. LeBlanc. Because the history and past uses of the Site are known, the lack of a title record review is not anticipated to limit Ransom’s ability to identify RECs in connection with the Site.

3.2 Environmental Liens or Activity and Use Limitations (AULs)

No environmental liens or activity/use restrictions in connection with the Site were identified by Mr. LeBlanc.

3.3 Specialized Knowledge

Fred LeBlanc indicated that he was aware the Site property had historically operated as a dry cleaning facility.

3.4 Commonly Known or Reasonably Ascertainable Information

Mr. LeBlanc indicated that the Site presumably used dry cleaning chemicals in the past, and the Environmental Protection Agency Hazardous Waste Generator I.D. #MED019026749 was identified in connection with the Site.

3.5 Valuation Reduction for Environmental Issues

Mr. LeBlanc did not identify a reduction in the purchase price, as compared to the fair market value, that was due to the Site being impacted by hazardous substances or petroleum products.

3.6 Owner, Property Manager, and Occupant Information

It is Ransom’s understanding that the Site contacts interviewed during this Phase I ESA study, including City of Lewiston municipal personnel and the Site occupant (Mr. LeBlanc) have provided Ransom with available information pertinent to Recognized Environmental Conditions in connection with the Site. This information has been included throughout the pertinent sections of this report.

3.7 Reason for Performing Phase I ESA

This Phase I ESA was performed to identify Recognized Environmental Conditions associated with the Site that have the potential to impact the soil, groundwater, or soil vapor conditions at, and in the area of, the Site. This Phase I ESA also endeavored to identify nearby sensitive receptors, and evaluate the potential that these receptors would be impacted by site-related contaminants.

3.8 Previous Environmental Reports

No previous environmental reports in connection with the Site were provided by the property owner or identified in a search of MEDEP databases.

4.0 HISTORICAL USES

4.1 Historical Use Information For The Site

The history of the Site was researched to ascertain past use from the present back to the property's first developed use. Reasonably ascertainable historical information sources researched in this assessment allowed uses of the Site to be traced from the present back to circa 1914. At that time, the Site was developed with a wagon repair shop, a steam-dye facility, and dry cleaners, which occupied the current boiler room and area of the current storage shed. The following standard historical sources were reviewed by Ransom:

1. Interviews with the current property owner, Fred LeBlanc.
2. Historical City Directories dated 1961, 1967, 1973, 1992, 1999, 2003, 2008, and 2013 (Appendix C).
3. Historical topographic maps dated 1908, 1940, 1956, and 1979 (Appendix D).
4. Historical Sanborn Fire Insurance maps dated 1914, 1922, 1950, 1957, and 1977 (Appendix D).
5. Aerial photographs dated 1953, 1973, 1981, 1992, 1997, 2003, 2006, 2007, 2009, and 2011, (Appendix E).
6. Information reviewed at the City of Lewiston municipal offices.

The following table presents a summary of the historical use of the Site over time.

Year(s)	Property Use and Observed Details	Reference Source
Circa 1914	-Lewiston Steam Dye House/ J.E. LeBlanc & Son Dry Cleaning (main Site building is not on the property yet and operations occur in current boiler room) -Shed area, which was previously a different building with the same shape, is used as a Wagon Repair Shop -Five gasoline underground storage tanks are observed on Site in the front of the current boiler room	Sanborn Maps
Circa 1914- circa 1922	-Lewiston Steam Dye House/ J.E. LeBlanc & Son Dry Cleaning (main Site building is not on the property yet and operations occur in current boiler room) -Previous shed-shaped building is still used as a Wagon Repair Shop -Four gasoline underground storage tanks are observed on Site; two are located in front of the current boiler room and two are located behind the boiler room.	Sanborn Maps
Circa 1950- 1955	-Lewiston Steam Dye Ho. Co. and LeBlanc's Cleaners & Dyeing Co, operations take place in current boiler room. Previous shed-shaped building is still on Site but no longer	Sanborn maps

Year(s)	Property Use and Observed Details	Reference Source
	referenced as a wagon repair facility. -One underground storage tank is observed on the Site in front of the boiler room (date: 1950)	
Circa 1957-1977	LeBlanc's Cleaners & Dyeing Co. & Lewiston's Steam Dye House, operations begin in current main Site building (constructed in 1955) -Previously shed-shaped building is demolished and rebuilt as the current shed in 1959.	Municipal offices, Site contact, Property Card, Sanborn Maps, Aerial Photographs, City Directories.
Circa 1979-Present	LeBlanc Cleaners; Site in its current condition	Site Contact, City Directories, Municipal Offices, Aerial Photographs, Historical Topographic Maps

4.2 Historical Use Information for Adjoining Properties

Historical uses of the adjoining properties to the Site are presented in the table below and were identified in the standard historical sources listed above during the course of researching the Site.

Year(s)	Property Use and Observed Details	Reference Source
North		
Circa 1980 to Present	Commercial property, occupied by St. Mary's Hospital	Site visit, Municipal offices, Aerial Photos
Prior to circa 1980	Undeveloped property	Aerial Photos, Sanborn Fire Insurance Maps
Northeast		
Circa 1898 – present	Residential Property	Aerial photographs, Municipal Offices, Property Card, Site Visit
South		
Circa 1900 to Present	Residential property	Site Visit, Aerial Photos, City Directories, Sanborn Fire Insurance Maps
West		
Circa 2010-present	Commercial Property, St. Mary's Regional Medical Center	Site Visit, Aerial photos, City Directories, Municipal Offices
Circa 1968 to 2010	Residential	Aerial Photos, City Directories
Prior to Circa 1968	Vacant	Aerial Photos, Municipal Offices, Sanborn Fire Insurance Maps, Topographic Maps

Year(s)	Property Use and Observed Details	Reference Source
East		
Circa 1914 to Present	Residential properties	Site Visit, Aerial Photos, Sanborn Fire Insurance Maps
Prior to circa 1914	Undeveloped area of otherwise residential neighborhood	Municipal Offices, Sanborn Fire Insurance Maps

Historical property uses of the Site and neighboring properties are not anticipated to have contributed contaminants to the subsurface in the area of the Site.

4.3 Chain of Title

According to the City of Lewiston Assessor's Office, the Site is currently owned by LeBlanc Cleaners & Reconditioners, Inc., showing Fred LeBlanc as president. The following ownership history was provided by the City of Lewiston's Assessor's Office.

Owner	Date	Book/Page
LeBlanc Cleaners & Reconditioners, Inc.	1979	1391/66
Alfred S. Sr. & Alfred S. LeBlanc Jr.	1977	1219/138
Alfred S. & Julien O. LeBlanc	Unknown	555/313
Alfred LeBlanc	Unknown	494/388

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Ransom contracted Environmental Data Resources, Inc. (EDR) to conduct a search of Federal and State databases containing known and suspected sites of environmental contamination. The number of listed sites identified within the approximate minimum search distance (AMSD) from the Federal and State environmental records database listings specified in ASTM Standard Practice E 1527-13 are summarized in the following table. Detailed information for sites identified within the AMSDs is provided in Section 5.1.1, along with an opinion about the significance of the listing to the analysis of RECs in connection with the Site. A copy of the EDR research data and descriptions of the databases is included in Appendix C of this report.

DATABASE RECORD	AMSD (Miles)	Total Sites Found	On Subject Property	On Adjoining Property
Federal NPL List	1	0	No	No
Federal Delisted NPL List	0.5	0	No	No
Federal CERCLIS List	0.5	0	No	No
Federal CERC-NFRAP List	0.5	0	No	No
Federal RCRA CORRACTS Facilities List	1	0	No	No
Federal RCRA Non-CORRACTS TSD Facilities List	0.5	0	No	No
Federal RCRA Generators List	0.25	4	Yes	Yes
Federal Institutional/Engineering Controls Registries	0.5	0	No	No
State-Equivalent CERCLIS/SHWS List	0.5	0	No	No
State Landfill and/or Solid Waste Disposal Site List	0.5	0	No	No
State Leaking AST List	0.5	20	No	No
State Registered AST List	0.25	3	No	No
State Leaking UST List	0.5	24	No	No
State Registered UST List	0.25	10	No	No
State Institutional/Engineering Controls Registries	0.5	1	No	No
State Voluntary Cleanup Sites	0.5	2	No	No
State Brownfield Sites	0.5	2	No	No
FINDS Database	Property Only	1	Yes	No
Underground Injection Control (UIC)	Property Only	1	Yes	No
U.S. AIRS database	Property Only	1	Yes	No
State Dry Cleaner Sites	0.25	1	Yes	No

5.1.1 Discussion of Database Findings

The following presents a discussion of pertinent surrounding properties identified within the databases outlined above. Discussions have not been included for databases in which no properties were identified, or for properties which were determined not to represent a threat to the environmental condition of the Site, based on their location with respect to the Site, or the significance of the environmental concern represented by the identified property.

Site

The Site, which is no longer in use but was previously identified as “LeBlanc Drycleaners”, was identified in the following environmental databases: Resource Conservation and Recovery Act (RCRA) Conditionally Exempt Small Quantity Generator (RCRA-CESQG), Facility Index System/Facility Registry System (FINDS), EDR United States Historical Cleaners, United States Aerometric Information Retrieval System (AIRS), and Underground Injection Control (UIC). The Site was listed as in compliance with the procedural requirements of the United States AIRS program. The UIC information suggested that in 1993, the floor drains associated with the Site building were reported to be connected to the municipal sewer system at the time of the site inspection, and are not active.

According to information contained in the EDR report, the Site was associated with U.S. EPA Hazardous Waste I.D. #MED019026749 for disposal of small quantities of halogenated solvent materials associated with the former dry cleaning operation, including tetrachloroethylene (“Perc”). Ten violations were reported in connection with the Site’s listing as a RCRA-CESQG. Areas of violations include universal waste-large quantity handler, treatment/storage/disposal (TSD), State statute or regulation, generators manifest, pre-transport, and records/reporting. Violations were identified in the EDR report in the years 2013 and 2007.

Based on the information contained in the EDR report, it appears that the Drycleaner database contained records of the Site from 1991 to 2012. For these years, the value for “Perc” ranges from 100 in 1994, to 0 in 1993, 2008, 2009, and 2011. The values for “Perc” listed in the EDR report are assumed to represent quantities used or disposed of during those years.

Federal RCRA Generators List

EDR identified 4 properties within 0.5-miles of the Site as Federal RCRA Generator properties. One Federal RCRA hazardous waste generator facility was identified by EDR to be adjoining the Site. A RCRA Conditionally Exempt Small Quantity Generator (CESQG) is located on the adjoining property to the northwest, St. Mary’s Medical Center at 106 Campus Avenue. Violations were not identified by EDR in relation to this listing. Furthermore, identifications as a RCRA Generator indicates the proper disposal of wastes requiring manifest documentation and does not necessarily indicate an environmental concern. Based on the lack of violations, this facility is not anticipated to have an adverse impact to the environmental conditions at the Site.

The remaining Federal RCRA Generator properties are not anticipated to represent a threat to the environmental condition of the Site due to their location with respect to the Site.

Leaking Above Ground Storage Tank Sites

EDR identified 20 properties within 0.5-miles of the Site as Leaking AST properties. One of these properties was identified at 30 Hamel Street, which is a residence located 380 feet east of the Site. According to MEDEP Spill Report #P-1044-2004, approximately 0.5 gallons of #2 fuel oil was released to this property in 2004. According to the spill report, tank corrosion caused the discharge of approximately one half gallon of #2 fuel oil to the cement basement floor of the residence. The hole was plugged by a burner tech and spilled product was absorbed with wood chips and the floor was cleaned with sand. No other items were impacted by the leak and tank replacement occurred the following day. No information was available regarding soil or groundwater conditions following the cleanup efforts. This property is located side-gradient to the Site, therefore the property is unlikely to have impacted the environmental condition of the Site. A copy of Spill Report #P-1044-2004 is included in Appendix B.

EDR identified another leaking AST property known as St. Mary's Hospital, located 385 feet west of the Site at the intersection between Campus Ave and Sabattus Ave. According to MEDEP Spill Report #P-168-1995, approximately 800 gallons of #6 fuel oil was released on Campus Ave in 1995 during an oil delivery causing discharge to migrate to the parking lot of the hospital. The fuel oil was reportedly cleaned up with sorbent materials and vacuum trucks by Clean Harbors of South Portland and is not expected to have impacted soil or groundwater at this property. Therefore, the St. Mary's Hospital (Campus Ave and Sabattus Street intersection) property is unlikely to have impacted the environmental condition of the Site. A copy of Spill Report #P-168-1995 is included in Appendix B.

The remaining Leaking AST properties are not anticipated to represent a threat to the environmental condition of the Site due to their location with respect to the Site.

State Registered AST Sites

EDR identified 3 properties within 0.25-miles of the Site containing State-registered aboveground storage tanks (ASTs). These properties are located at distances greater than 500 feet from the Site property, and therefore are not anticipated to represent a threat to the environmental condition of the Site.

State Leaking UST Sites

EDR identified 24 properties within 0.5-miles of the Site as leaking underground storage tank (LUST) sites. One of these properties, known as St. Mary's Hospital, was associated with MEDEP Spill Report #P-688-1999. The property is located 385 feet northwest of the Site, at the intersection of Campus Avenue and Sabattus Street. According to the Spill Report, in 1999, 0.99 gallons of virgin gasoline was released in the parking lot of the property. Contaminated soil was discovered and believed to be caused by underground storage tanks which were removed many years earlier. Three hundred twenty-four (324) cubic yards of contaminated soil was removed from the property and transported for off-site disposal. The spill report indicated that the contamination was not expected to have impacted groundwater at this property. The information reported in the Spill Report suggests that this property is unlikely to impact the environmental condition of the Site. A copy of Spill Report #P-688-1999 is included in Appendix B.

The remaining properties identified on the Leaking UST database appear to be located side-gradient, or hydrologically isolated from the Site, and are unlikely to impact the environmental condition of the Site.

State Institutional/Engineering Controls Registries

EDR identified one property, known as the Medicine Shoppe, as a State institutional control or engineering control site. The Medicine Shoppe property is located approximately 329 feet south of the Site. The property was also identified on the following additional databases: ALLSITES and Voluntary Cleanup Program. This site is listed as having “No Further Action” status for all three listings. Therefore, this property is not anticipated to represent a threat to the environmental conditions of the Site

State Dry Cleaner Sites

As previously discussed, the Site was identified by EDR as a State Dry Cleaner Site. No other surrounding properties were identified on the Dry Cleaner database within 0.25 miles of the Site

Orphan Sites

EDR orphan site designation indicates insufficient address information for the Site to be plotted. The sites identified in the orphans list appear to be located at positions considered to be hydraulically isolated/down-gradient from the Site, or are beyond the applicable ASTM search parameters, and therefore, are not considered likely to have adversely impacted environmental conditions at the Site.

5.1.2 Maine Department of Environmental Protection Online Databases

Ransom also reviewed the following Maine Department of Environmental Protection (MEDEP) online databases for information pertaining to the Site and/or properties in the vicinity of the Site with known and/or suspected environmental contamination and their potential to adversely impact environmental conditions at the Site.

1. “Division of Remediation Sites List” (MEDEP “Sites List”) online database;
2. “Non-Conforming Tanks” online database;
3. “Registered Underground Oil Storage Tanks” online database;
4. “Active and Out of Service Underground Oil Storage Tanks Including Tanks That Have Not Been Properly Abandoned” online database; and
5. “Oil Storage Tank Search & Operator Training” online database;
6. “Hazardous and Oil Spill” online database.

The Site was not identified on any of the above-mentioned databases. However, a search of the MEDEP on-line file room database identified six folders associated with “LeBlanc Cleaners.”

These folders reportedly include general correspondence, results, reports, expenses, closure plans, and compliance actions. It is not clear if this information corresponds to the Site property, or an alternate location of the LeBlanc cleaners operation. Copies of hazardous waste manifests from the facility are included in Appendix B.

5.2 Additional Environmental Record Sources

5.2.1 City of Lewiston Assessor's Office

Information provided by the City of Lewiston Assessor's Office included a current and historic property card and tax map (Appendix B). Additional tax maps were also obtained from the Assessor's Office and used to generate a figure showing a 2,500-foot radius around the Site (Figure 3). The current property card indicates that Site building was constructed in 1955, and that the storage shed was constructed in 1959 (after demolition of previous building in its place). The property card did not include information pertaining to underground or aboveground storage tanks, hazardous waste storage, and/or adverse environmental conditions at the Site.

5.2.2 City of Lewiston Economic, Code Enforcement, Planning and Community Development Office

Ransom contacted the City of Lewiston Planning and Development office for information pertaining to Site layout and infrastructure. The Planning and Development Department had no files or other information in connection with the Site.

5.2.3 City of Lewiston Fire Department

Ransom contacted Inspector Paul Ouellette at the City of Lewiston Fire Department regarding environmental conditions at the Site. No records in connection with the Site were identified by Inspector Ouellette and the Fire Department staff had no personal knowledge of spills or releases of hazardous materials or underground storage tanks at the Site.

5.2.4 City of Lewiston Sewer and Water District

Ransom contacted Mr. Kevin Gagne, Superintendent of the Lewiston Sewer and Water Department. Mr. Gagne referred Ransom to Mr. Jim Ward, GIS Manager for the Lewiston Sewer and Water Department. Mr. Ward provided a plan showing underground sewer and water utilities in the vicinity of the Site (Appendix B). Ransom also contacted Mr. Ryan Barnes, Project Engineer for the Lewiston Sewer and Water District. According to Mr. Barnes, no private water supply wells or on-site septic systems are located within a 2,500 foot radius of the Site.

6.0 SITE RECONNAISSANCE

On April 3, 2015, Ransom conducted a reconnaissance of the Site. Site access was coordinated through the current property owner, Fred LeBlanc, who provided a description of the Site and facilities to be assessed. A photograph log is included in Appendix A.

6.1 Methodology and Limiting Conditions

The site reconnaissance included observations of the property grounds for evidence of releases, or potential releases of oil and/or hazardous materials (OHM), or a material threat of releases of OHM. Weather conditions at the time of the reconnaissance were sunny with temperatures around 50 ° F.

6.2 General Site Setting and Observations

The Site building was observed to be previously used as a dry cleaning facility. Two dry cleaning machines were observed along the northwestern wall of the main Site building, as shown on Figure 2. One of the dry cleaning units has been inoperable since 1978, while the other Renzacci dry cleaning unit has been inoperable since November 2014. Two dryer units, two wet-washing units, one paint-molding machine (inoperable since early 1970's), and one extractor were also observed on the northwestern wall of the main Site building. Hazardous materials were observed on the Site, including distilled waste Perchloroethylene ("Perc"), spent filters, and Perc in holding tanks which were all stored in the Renzacci dry cleaning unit and had not been disposed of to date. Several empty drums and unidentified substance containers were observed on the Site as well, with staining and substance residue noted on or in the vicinity of the containers. Staining was observed on the concrete floor throughout the main Site building. A total of five vent pipes were observed on the property as well, four of which were located in the back of the main Site building and boiler room, and one was located in the front of the boiler room. Properties along Lafayette Street to the east and south of the Site are generally single and multi-family residential use. Based on the observed construction of the residential structures, they are anticipated to include full or partial basements.

6.2.1 Hazardous Substances and Petroleum Products

The laundry dryer units are heated by a boiler unit, which is supplied by heating oil stored in two 275-gallon ASTs in the boiler room section of the main Site building. Heat for the building is provided by the ceiling space heater unit located in the central portion of the main Site building and is supplied by the heating oil in the ASTs. Evidence of OHM and storage of hazardous materials were observed by Ransom during the Site reconnaissance.

The northern side of the main Site building had three empty and closed, 1-gallon containers previously used as storage for Perc. Two of these containers previously stored fresh, imported Perc, and one container previously stored waste Perc, which was disposed of by Safety-Kleen Systems. Seven empty and capped 12-fluid ounce containers of stain removers, including StreeTAN, StreePRO, and Erusticator rust remover, were also located in the same vicinity as the Perc containers. On the concrete floor adjacent to the stain removers, Ransom observed six empty, 1-gallon containers of Vel-Odor odor remover and Complete laundry detergent. Two empty and capped, 1-gallon containers of paint, oil, and grease remover were also observed in this area. These containers had dark, grease-like residue on the outside of the container as well as minimal residue on the concrete floor under the containers. Three half-empty 1-gallon containers

of Wetspo (wet cleaner), one empty, 16-ounce container of Woolite, and three empty 1-gallon containers of Tide were observed on a table located in the central part of the main Site building. Further north, located in front of the two dryers, were two empty and capped 5-gallon containers of alkalide soap booster and bleach, one empty and open 5-gallon container of AllPro detergent, one capped and empty 10-gallon container of hydrogen peroxide, and one uncapped and empty 5-gallon container of flo-det detergent, which had a hose attached to the top. Some staining was observed on the concrete floor under the flo-det container.

In the southern section of the main building, located next to a floor drain, were two barrels containing empty, 5-gallon containers of Perc (one in each barrel). Staining was observed on the concrete under one of the two barrels.

The reception portion of the main Site building had two 5-gallon, empty barrels of Bright Start Laundry detergent. Ransom did not note odors or staining indicative of a release of OHM in the vicinity of the office or reception area.

Additionally, the Renzacci dry cleaning machine had storage of Perc and water in the holding tanks of the machine, filtered-out distilled Perc located in the back of the machine, used filters, and pre-filter containment and lint. Staining was observed under the machine in the vicinity of the holding tanks with Perc storage. According to Mr. LeBlanc, no other machines have any storage of waste fluid and he plans on properly disposing of the wastes through Safety Kleen in the near future.

6.2.2 Storage Tanks

Underground Storage Tanks (USTs)

According to Mr. LeBlanc, there are no known underground storage tanks (USTs) on the Site. However, according to historical Sanborn maps dated 1914, 1922, and 1950 the Site has a history of former USTs on the Site. The 1914 Sanborn map indicates five gasoline USTs located directly southeast of the boiler room. On the Sanborn map dated 1922, the Site had four USTs: two located directly southeast of the boiler room and two on the backside of the boiler room. The 1950 Sanborn map shows one UST located directly southeast of the boiler room. The presence of USTs are not indicated in the Sanborn maps post 1950.

A total of five vent pipes were observed on the Site. Four vent pipes were observed in the back wall of the Site building. According to Mr. LeBlanc, two of the vent pipes located on the northern side of the Site building were historically used as an escape for the hot air from the drying units. These vent pipes were bagged with garbage bags in order to prevent cold air from coming into the building. One vent pipe that was not bagged and located in a higher position on the Site building was previously a vent for the older dry cleaning machine that used a ventilation system. According to Mr. LeBlanc, fumes from the dry cleaning machine were discharged through this vent and into the air, but this process has not taken place since 1978, before he took ownership of the facility. One vent pipe, located on the western side of property on the boiler room back wall, was previously used as a vent for the hot air from the boiler. One vent pipe was observed in the front of the boiler room coming out of the ground in the vicinity where the previous underground storage tank was located. Mr. LeBlanc was not sure what the vent pipe was previously used for and said it had been there since before he had taken ownership.

Aboveground Storage Tanks (ASTs)

Two 275-gallon ASTs are located in the boiler room along the western side of the Site building. The ASTs are used to store heating oil for the boiler system in the boiler room and space furnace in the main Site building. The Site building has not been heated since November 2014. The ASTs have two associated fill pipes that extend along the southwestern wall of the boiler room to the outside wall facing the parking area. Ransom observed minimal staining of the concrete floor under the AST and against the wall of the boiler room along the fill pipes. Ransom did not note petroleum odors. According to Mr. LeBlanc, the storage tanks have been on the Site since the construction of the building.

6.2.3 Odors

No strong, pungent, or noxious odors indicative of a release of OHM to the environment were noted at the Site during our reconnaissance.

6.2.4 Pools of Liquid

Ransom did not observe areas of standing water and/or pools of liquid indicative of a release of OHM at the Site during our reconnaissance.

6.2.5 Drums

Ransom observed three closed top plastic 55-gallon drums and two closed top metal 55-gallon drums in the boiler room of the Site building. These drums appeared to be empty and were not labeled as to their past contents. According to Mr. LeBlanc, the drums are empty and most likely had contained Staticol fabric detergent as well as other detergents and soaps used for the cleaning machines, but that they did not contain Perc. Ransom observed staining, primarily on the drums themselves and the release spout, indicative of a release of OHM in the vicinity of the drums. Minimal staining was also observed on the concrete floor in the vicinity of the plastic drums.

Along the northern corner of the Site building in front of the extractor machine was the storage area for waste solvents and liquids. In this vicinity, there were three empty 55-gallon metal drums as well as two barrels, which are used as containment for waste storage of smaller, 5-gallon containers. According to Mr. LeBlanc, the drums and barrels in this vicinity are used for hazardous waste storage which is routinely disposed of by Safety Kleen. Ransom observed some staining on the concrete floor in the vicinity of these drums and barrels.

6.2.6 Unidentified Substance Containers

Ransom observed four empty, 1-gallon unidentified substance containers in the boiler room of the Site building. According to Mr. LeBlanc, these containers contained off-the-shelf soaps and detergents that were used to fill the drums. An unidentified, empty and uncapped plastic 1-gallon container was observed behind the Renzacci dry cleaning unit. Staining was observed on the container itself.

Ransom observed a machine in the Site building that Mr. LeBlanc could not identify. One 1-gallon and one pint-sized unopened container of paint were observed on top of the unit. The

use of the machine could be related to the Site's historical use of paint molding on athletic equipment or its use as a steam dye facility, but this could not be confirmed by Mr. LeBlanc.

Ransom did not observe any more unidentified substance containers at the Site during our reconnaissance.

6.2.7 Polychlorinated Biphenyls (PCBs)

Ransom did not identify electrical transformers, hydraulic equipment, or other typical potential sources of Polychlorinated Biphenyls (PCBs) at the Site during our reconnaissance.

6.3 Interior Observations

6.3.1 Heating/Cooling

Heat for the Site building is provided by a space heater unit located in the central part of the main Site building. Heat for the dryer units is provided by a boiler unit located in a boiler room in the western portion of the Site building. Heating oil is stored in the 275-gallon ASTs located in the boiler room. According to Mr. LeBlanc, the building has not been heated since November 2014, when operations ceased. The Site Building does not appear to be actively cooled.

6.3.2 Stains or Corrosion

Ransom observed staining of the floor and wall of the boiler room in the vicinity of the aboveground storage tanks and empty plastic 55-gallon drums. Ransom noted an area of staining and/or residue on the concrete floor and in the vicinity of the 1-gallon containers of oil and grease remover in the main building. These containers had dark, grease-like residue on the outside of the container as well as on the concrete floor under the containers. Minimal staining was observed in the area with the flo-det container next to the dryers. Significant staining was observed under the Renzacci dry cleaning machine's Perc holding tanks. Some cracking of the concrete slab was noted in the area behind the Renzacci unit; however, the concrete did not appear to be stained in this area. Ransom observed some staining on the concrete floor in the vicinity of the drums that have historically been used to store hazardous waste. Significant staining was observed in the vicinity the sports helmet molding/painting machine which, according to Mr. LeBlanc, has not been in operation since before he took ownership in 1978.

6.3.3 Drains and Sumps

Three approximately 2-inch diameter floor drains were observed within the Site building (Figure 2). One drain is located in the boiler room, the remaining two are located in the main Site building. Mr. LeBlanc was not able to verify that the drains observed by Ransom were connected to municipal sewer.

6.3.4 Other Hazardous Building Materials

Based on the age of the Site Building (constructed 1955), it is possible that asbestos-containing materials (ACM) are present, lead-based paint may exist on interior and exterior surfaces,

fluorescent lights typical of those containing mercury are present, and other potential universal wastes may exist at the Site.

6.4 Exterior Observations

6.4.1 Pits, Ponds or Lagoons

Ransom did not observe evidence of pits, ponds or lagoons at the Site during our reconnaissance.

6.4.2 Stained Soil or Pavement

Neither stained soil nor stained pavement was observed during our reconnaissance. However, it should be noted that at the time of the site reconnaissance, large portions of the ground were covered by snow and ice.

6.4.3 Stressed Vegetation

No stressed vegetation, indicative of a release of OHM, was observed on the Site during our reconnaissance.

6.4.4 Solid Waste

Municipal solid waste appeared to be stored in trash cans in the asphalt parking lot in front of the boiler room. Municipal solid waste is reportedly disposed off-site by local contractors.

6.4.5 Waste Water

Waste water generated at the Site is discharged to the municipal sewer system.

6.4.6 Wells

Ransom did not observe groundwater monitoring wells, dry wells, water supply, irrigation wells, or injection wells at the Site.

6.4.7 Drains

A storm water drain was observed in the asphalt portion of the property near Lafayette Street, as shown on Figure 2.

6.4.8 Other

Ransom did not observe conditions of potential concern beyond those described above.

7.0 INTERVIEWS

Ransom interviewed the following entities/individuals in an effort to obtain information indicating potential RECs in connection with the Site.

7.1 Past and Present Site Owners

Site access was arranged through Fred LeBlanc, the current property owner. Information provided by Mr. LeBlanc included a description of Site operations since he purchased the property in 1979. According to Mr. LeBlanc, dry cleaning services have not been performed at the Site since November 2014. While operating, the Renzacci dry cleaning machine used “Perc” as the primary dry cleaning solvent. Mr. LeBlanc reported using approximately 20 gallons of the dry cleaning solvent every few months, on an as-needed basis. Used filters and spent dry cleaning solvent was reportedly picked up by Safety-Kleen on a periodic basis for disposal as hazardous waste. Mr. LeBlanc was not aware of any leaks or spills of dry cleaner solvents during his or his family’s ownership of the Site property. Mr. LeBlanc was not able to cite the date of the construction of the Site building, boiler room section of the building, or storage shed but indicated that he thought it operated since the 1950’s.

7.2 Site Manager

Mr. LeBlanc was identified as the manager of Site and provided the information discussed above.

7.3 Site Occupants

Mr. LeBlanc was identified as the primary Site occupant, and provided the information discussed above.

7.4 Local Government Officials

On April 3, 2015, Ransom conducted informal interviews with various municipal officials with the City of Lewiston, regarding their knowledge of the Site. Information obtained from these officials is discussed in Section 5.2.

In addition to the municipal officials, Ransom contacted Mr. Peter Carleton of the MEDEP Bureau of Air Quality Control. Mr. Carleton was familiar with the Site and operations having conducted several Site inspections in the past. According to records submitted to Mr. Carleton’s department, the Site had shipped approximately 370 pounds of hazardous waste for disposal in 2013; however, there was no record of hazardous waste disposal in 2014. Mr. Carleton’s observations of the facility suggested that the operational dry cleaning machine was very old and prone to leakage. Mr. Carleton reported that the property owner had difficulty finding replacement parts due to the age of the dry cleaning machine. Therefore, the gaskets, seals, and piping fixtures associated with the dry cleaning machine were expected to be in poor condition. Furthermore, Mr. Carleton expressed concern about the floor drain located in the vicinity of the dry cleaning machine. Due to the location of the floor drain, there is a potential that dry cleaning solvents were released to the floor drain as a result of leaks or spills from the dry cleaning machine.

8.0 WATER SUPPLY WELL SEARCH

Ransom reviewed the Significant Sand & Gravel Aquifer Map, Lewiston Quadrangle (Maine Geological Survey Open File No. 99-22) to identify potential sensitive receptors in the area of the Site. According to the map, the Site is not located on a Significant Sand & Gravel Aquifer. No water supply wells were identified by the Maine Geological Survey in the area of the Site. In addition, Ransom reviewed information provided by the Maine Center for Disease Control (MCDC), Drinking Water Program regarding the location of public water supply wells. According to the MCDC, no public drinking water supply wells are located within the area of the Site.

In April 2015, Ransom contacted the City of Lewiston Sewer & Water District and interviewed district personnel in an effort to identify underground sewer and water utilities in the immediate area of the Site, as well as water supply well locations within a 2,500-foot radius of the Site. Mr. Kevin Gagne, superintendent of the Sewer & Water District, and Mr. Jim Ward, GIS Manager of the Sewer and Water District, provided a copy of a plan showing underground sewer and water lines in the vicinity of the Site (Appendix B). Ransom also contacted Mr. Ryan Barnes, Project Engineer for the Lewiston Sewer and Water District. According to Mr. Barnes, no private water supply wells or on-site septic systems are located within a 2,500 foot radius of the Site. Properties located within the 2,500 foot search radius are shown on Figure 3.

9.0 VAPOR ENCROACHMENT ASSESSMENT

In conjunction with the Phase I ESA, Ransom performed a Vapor Encroachment Assessment (VEA) in general accordance with ASTM International Standard E2600-10. However, for the purpose of this report the VEA was modified to identify properties which would have the potential to be impacted by contaminants associated with the Site property, if such contaminants had been released to the subsurface. In accordance with the ASTM standard, Tier I screening methods were utilized to determine potential impacts to surrounding properties, as information for Tier II screening is not available at this time.

Much of the information required for the VEA has been discussed in previous sections of this report. Site and vicinity characteristics, including property use, are discussed in Section 2.2. Soil and groundwater characteristics are discussed in Section 2.5. A review of environmental database information is provided in Section 5.0. Underground municipal utilities and property use in the vicinity of the Site are shown on Figure 4.

The following additional information is presented in support of the VEA.

9.1 Contaminant Characteristics

The contaminants of concern associated with the Site property include tetrachloroethene ("Perc") and its breakdown products including trichloroethene, cis-1,2-dichloroethene, trans-1,2-dichloroethene, and vinyl chloride. These compounds are generally persistent in the environment and can cause health effects including cancer. Chlorinated solvent compounds have a specific gravity heavier than water and will tend to sink through the saturated zone until a confining layer is encountered. This characteristic makes bedrock aquifers particularly susceptible to impacts from these contaminants. Chlorinated solvents can also volatilize from the source area or contaminated groundwater and affect soil vapor conditions.

9.2 Migration Pathways and Exposure Points

If dry cleaning chemicals were spilled or released at the Site, the likely entry points into the subsurface would be in the area of the current and former dry cleaning machines, the former waste chemical storage area in the main operations Site building, the outside area behind the main operations Site building where vented releases could have occurred in the past, or in the chemical storage area in the boiler room. Contaminants in these areas may have migrated through the concrete slab floor or may have been discharged to any of the floor drains in the Site building (northern side and southern side) or boiler room (central). The discharge locations of the floor drains could not be confirmed by the property owner.

If contaminants are located beneath the footprint of the Site building, they would be expected to migrate in the vapor phase along preferential pathways such as the sewer and water services. Once in the public right-of-ways, these contaminants have the potential to migrate to nearby properties through the municipal utility trenches. Indoor air conditions at nearby properties may be impacted through vapor intrusion. Occupants at nearby properties, particularly residential units with basements, would then be at risk of exposure to contaminants from the Site.

Furthermore, contaminants from the Site also have the potential to have impacted groundwater and be migrating in the dissolved phase in conjunction with the groundwater flow direction, which is presumably to the north/northeast. According to the water supply well search (Section 8) there are no water supply wells located within a 2,500 foot radius of the Site. Therefore, contaminants from the Site are not likely

to be ingested via groundwater. However, if a contaminant plume of significant concentration extends from the Site, properties in the down-gradient direction may be impacted by off-gassing of contaminants from the groundwater table. Occupants of buildings in the down-gradient direction from the Site, particularly residential properties with basements, have the potential to be exposed to contaminants through vapor intrusion and inhalation of impacted indoor air.

9.3 Vapor Encroachment Assessment Conclusions

Based on the operation of the Site property as a dry cleaning facility using “Perc” from at least the 1950’s until 2014, a Vapor Encroachment Condition (VEC) cannot be ruled out. Although no specific documentation of contaminant releases were identified during the assessment, it is possible that unreported releases occurred and have impacted subsurface conditions at the Site. Additional investigation will be necessary to confirm or refute this possibility.

10.0 SUMMARY OF KEY FINDINGS

Ransom has completed a Phase I ESA in conformance with the scope and limitations of ASTM Standard Practice E 1527-13 and AAI (40 CFR Part 312) for the commercial property located at 10 Lafayette Street in the City of Lewiston, Androscoggin County, Maine. The scope of work for this ESA included a Water Supply Well Search and a Vapor Encroachment Assessment to identify potential receptors in the vicinity of the Site.

Information obtained during this ESA indicates that the Site was developed with a wagon repair shop, steam dye facility, and dry cleaning operation circa 1914. The main Site building with the more current dry cleaning operations was constructed on the Site circa 1955. At that time, the Site operated one dry cleaning unit which utilized tetrachloroethene or "Perc" as the primary dry cleaning solvent. According to the property owner, the original dry cleaning machine was vented to the exterior on the western side of the Site building. The original dry cleaning unit and associated vent pipe remain on the Site but have not operated since the early 1970's. An additional Renzacci dry cleaning unit that was in use since the 1970's until 2014 utilized Perc throughout its operations. Dry cleaning operations ceased in November 2014, and used filters, pre filter lint, and spent solvents from the Renzacci dry cleaning machine have yet to be disposed of. Significant staining was noted under this dry cleaning unit as well as throughout the Site building, including some staining in the concrete floor under the drums that have historically been used for hazardous waste storage. Previously used filters, spent solvents, and waste Perc were reportedly stored on the northern side of the building and disposed of by Safety Kleen throughout dry cleaning operations. The Site reconnaissance performed as part of this ESA observed empty drums and substance containers on the Site, with staining and substance residue noted on or in the vicinity of the containers, dry cleaning units, and wet-washing units.

The Site is developed with a brick-supported single-story commercial building constructed on a concrete slab. The current and former dry cleaner units were located along the northwestern wall of the main Site building between 1955 and 2014. According to Sanborn Maps dating back to the early 1900's, historical dry cleaning operations took place in the current boiler room. Mr. LeBlanc, the Site owner, had no information regarding operations that took place prior to 1955 or in the boiler room section of the building. According to Mr. LeBlanc, dry cleaning chemicals have been stored in the northern portion of the Site building since 1955.

A total of five vent pipes and two fill pipes are located on the property. The fill pipes lead to two 275-gallon heating oil storage tanks. Mr. LeBlanc was not aware of the presence of underground storage tanks at the Site. However, according to historical Sanborn Maps, underground storage tanks were located on the Site between 1914 and 1950. No records regarding tank registration, installation, inspections, or closure of the USTs were provided or identified during this assessment. The Site building is provided with municipal sewer and water services. According to the Lewiston Sewer & Water District, the sewer service discharges to the sewer main located on Lafayette Street. Two floor drains are located within the northern and eastern section of the Site building, and one additional floor drain is located in the boiler room. The discharge locations of the floor drains could not be confirmed.

The Site is located in a mixed use residential and commercial area. Commercial properties are primarily located to the north and south of the Site, along Sabattus Street and Campus Avenue. Residential properties adjoin the property to the northeast, east, south, and southwest of the Site, along Lafayette Street. A water supply well search identified no private water supply wells within 2,500 feet of the Site.

Ransom contracted Environmental Data Resources (EDR) to conduct a search of federal and state databases containing known and suspected sites of environmental contamination. The Site was identified by EDR under databases including RCRA Conditionally Exempt Small Quantity Generator (RCRA-CESQG), FINDS, EDR U.S Historical Cleaners, U.S. Aerometric Information Retrieval System (AIRS), and Underground Injection Control (UIC) Site. According to information contained in the EDR report, the Site was identified as a U.S. EPA Hazardous Waste Site for disposal of small quantities of halogenated solvent materials associated with the former dry cleaning operation, including tetrachloroethylene. Several violations were reported in connection with the Site's listing as a RCRA-CESQG.

As part of the Phase I ESA, a Vapor Encroachment Assessment (VEA) was performed in general accordance with ASTM International Standard E2600-10. Based on the operation of the Site property as a dry cleaning facility using "Perc" from at least 1955 until 2014, a Vapor Encroachment Condition (VEC) cannot be ruled out. If contaminants have impacted subsurface conditions at the Site, these contaminants would have the potential to migrate in soil vapor to surrounding properties through preferential pathways such as the municipal utility trenches. These contaminants could then impact indoor air conditions through vapor intrusion to surrounding structures.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-13 and USEPA AAI (40 CFR Part 312), of the Site identified by the City of Lewiston Assessor's Office as Tax Map 173, Lot 19, which corresponds to 10 Lafayette Street, City of Lewiston, Androscoggin County, Maine. The Phase I ESA included a water supply well search and a Vapor Encroachment Assessment in general accordance with ASTM Standard E2600-10. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. This assessment has revealed the following *recognized environmental conditions* (RECs) in connection with the Site:

1. The Site historically operated as a dry cleaning facility using the chemical tetrachloroethene or "Perc" as the primary dry cleaning solvent. Staining observed on the concrete slab floor throughout the Site building suggests that Perc may have been released due to leaking machinery or inadvertent spillage. Based on the chemical characteristics of Perc, and the condition of the concrete slab floor, these releases have the potential to have impacted soil, groundwater, and/or soil vapor conditions at the Site. Perc-containing condensate may also have been discharged to the surface of the Site as a result of ventilation from the historical dry cleaning machine(s).
2. Several underground storage tanks were identified on historical maps in the area of the boiler room. Although the tanks were identified as "gas tanks" on the historical maps, the contents of these tanks is unknown. Based on the historical use of the Site, the tanks likely contained fuel oil and/or dry cleaning chemicals. No records regarding tank registration, installation, inspections, closure records, or knowledge from the Site owner were provided or identified during this assessment. Furthermore, it is not clear if these tanks have been removed from the Site. Unknown or unreported releases from these former tanks have the potential to have impacted the environmental condition of the Site.
3. Three floor drains were observed in connection with the Site building. The discharge location of these floor drains could not be confirmed. The environmental conditions of

the Site have the potential to have been impacted as a result of leaks or releases of dry cleaning chemicals or petroleum products in connection with the floor drains.

4. A vapor encroachment condition for surrounding properties cannot be ruled out without additional investigation. Surrounding properties have the potential to be impacted by contaminants associated with the Site, if such contaminants have been released to the environment.

Therefore, we have revealed conditions indicative of a release(s) or threatened release(s) of oil and/or hazardous material substances on the Site. Based on the findings of this assessment, it is Ransom's opinion that additional investigation is warranted to address the above-stated RECs, document current Site conditions in relation to current regulatory clean up guidelines, and evaluate the potential for contaminants from the Site to have migrated to off-site properties. Our recommendations for additional assessment and/or investigations are presented in the following section.

11.0 RECOMMENDATIONS

Based on the information obtained during this assessment, Ransom recommends that a Phase II ESA be implemented to determine if a release of hazardous substances has occurred at the Site, and to evaluate current soil, groundwater, and soil vapor conditions at the Site. Findings from the additional investigation(s) should be used to evaluate potential health and environmental risks to the Site and surrounding area, and identify whether remediation or mitigation measures are necessary to eliminate these potential health and environmental risks.

12.0 ADDITIONAL SERVICES AND NON-SCOPE CONSIDERATIONS

12.1 Additional Services

The following environmental issues are outside the scope (non-scope considerations) of the standard practice defined by ASTM Standard Practice E 1527-05. This Phase I ESA does not identify or evaluate these non-scope considerations.

1. Asbestos;
2. Radon;
3. Lead in Drinking Water;
4. Wetlands;
5. Regulatory Compliance;
6. Cultural and Historic Resources;
7. Industrial Hygiene;
8. Health and Safety;
9. Ecological Resources;
10. Endangered Species;
11. Indoor Air Quality;
12. High Voltage Power Lines; or
13. Biological Agents.

14.0 SIGNATURE(S) OF ENVIRONMENTAL PROFESSIONAL(S)

Environmental Professional

We declare that, to the best of our professional knowledge and belief, we meet the definition of an Environmental Professional as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. Qualifications of the individuals listed below are provided in Appendix F.

Photograph Log

Phase I Environmental Site Assessment
Leblanc Cleaners
10 Lafayette Street
Lewiston, Maine

Photograph Log

Looking north at the Site along Lafayette Street.

Shed, boiler room, and part of main Site building looking northwest.

Side of storage shed on Site looking north from Lafayette Street.

Vent pipes and back of Site building looking southwest.

Interior view of storage shed.
Inoperable dry cleaning machine currently located at the Site

Interior view of boiler room.

Two 275-gallon heating oil ASTs and three empty, plastic drums in boiler room.

Two steel drums and boiler in boiler room.

Inoperable dry cleaning machine with vented system.

Renzacci dry cleaning machine perc holding tanks and floor staining under machine.

Pre-filter that collects lint and water waste bucket in the back of Renzacci machine.

Distilled perc waste storage containment in back of Renzacci machine.

Inoperable sports equipment paint molding machine (left) and wet-washing machine (right). Floor drain is located under wet-washing machine.

Bottom of Milnor machine and sports equipment painting machine with associated concrete staining.

One gallon containers of oil and grease remover and associated staining and residue.

Waste storage area and concrete floor staining on northern side of main Site building, beyond which is the extractor.

Office area located in southeast side of main Site building.

Reception area located in southeast section of main Site building.

Additional floor drain in boiler room.

Floor drain located in southern portion of main Site building, beyond which are empty containers of perc in barrels.

Trash cans outside of boiler room and two fill pipes for heating oil ASTs.

Front entrance of main Site building with vent pipe. Area is previous location of underground storage tanks.

Interior of main Site building, facing east.

Unidentifiable machine located on the east side of main Site building.

St. Mary's Hospital

Campus Ave , Lewiston, Maine 04240

P-168-95/ /Lewiston

31 Mar 95, approx 23 00 hrs , SP Gray rptd a 1,000 gal #6 oil spill at St Mary's Hospital [Sabbatus St and Campus St , Lewiston] I contac Mike Drimmer, maintenance super (207-777-8347), who confirmed the rpt I inform Drimmel to continu diking the spill to prevent migration Drimmel inform me that Webber Oil Co delivered the oil and that the wrong tank was filled causing a discharge through the vent on the roof of the boiler building, and that the product migrated down the building and onto the paved area and parking lot of the facility Drimmel inform me that no one was taking responsibility for the spill I inform him that I would hire a contractor to clean up the spill and that responsibility could be worked out at a later date, he agreed Jon Woodard and I responded to the spill I contacted Clean Harbors to respond to the spill

Upon arriv I observ product on the roof, down the side of the boiler building, and in the pav lot Before departing, Woodard informed me that he gave a CH rep a plug to install in a roof drain, that the hospital officials identified U assumed the plug was installed, but failed to follow up on the installation (*this may have attributed to #6 oil intrusion to the L/A waste water treatment fac , discovered 1 Apr 95, and rppt to DEP*)

I interviewed Roger Emmons, delivery personnel for Webber Oil Co Emmons inform me that he checked the fluid level gages of AST #1, which indicated 1,800 gal , and AST #2 which indicated 7,500 gal Emmons said, that he proceeded to connect the delivery line to the fill receptor and at that time Ramond Dennis, a hospital employee, added an additive to the fill piping, opened a gate valve to AST #2 instead of AST #1, and started the facility product pump that pumps the product from the tanker to the supply tanks Emmoms said, that Dennis opened the wrong gate valve causing the product to be delivered to AST #2 The tank overfilled causing the discharge of approx 800 gal of product out the #2 tank vent located on the supply tank and boiler room roof(s) Dennis, present during the interview did not object to the account

After Clean Hrbs arrived and initiated clean up, I interviewed Norman Letahen, St Mary's boiler supervisor, who confirmed Emmons account

1 Apr 95, while en route to Berwick, SP Gray rptd that Vivian Matkivich of Lewiston-Auburn Water Pollution Control Authority, rptd #6 oil intrusion into the treatment facility I responded to the compliant and while en route, I called the plant and spoke to Dick Robicaud, who inform me that he felt a vac truck was needed to recover the product I contac Jack Valery of CH, who sent a company rep to the plant to assess the situation I inform Valery to have CH personnel at St Mary's, investigate a storm drain that may be discharging product to the treatment facility Upon arrival to the treatment plant, I observed what appeared to be a heavy oil in the screen area, wet well area, and the separator pool of the facility

I made several attempts to contact Drimmel and other Hospital representatives, but they did not respond

I proceeded to boom the separator pool area with pom-pom sorbents Matkivich rptd the event to the NRC even though no discharge was observed to the Androscoggin R Cosmo Caterino of EPA Response Div , made contact w me though SP-Gray I reviewed the situation w him and he concurred that EPA not take any action

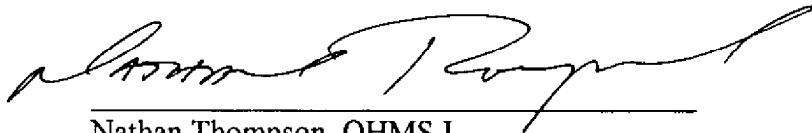

I contacted a DEP Water Quality representative, who contacted L/A water treatment to discuss regulatory issues between the two agencies

I visited St Mary's facility, and connected w Drimmer on site We discussed responsibility for the spill and he agreed it appeared that the hospital would be responsible for the clean up

Back at the water treatment facility, I concluded inspection of the clean up and water treatment representatives expressed no further concern of the clean up

I completed an AST Insurance Fund application request for the hospital

No further action is anticipated by Response Services

UNDERGROUND TANK(S) INFORMATION

Tank Registration Number: Number of Tanks Abandoned:

NARRATIVE

Contamination discovered during excavation for drainage. Believed to be caused by underground tanks which had been removed many years earlier. CRS tested soil for lead content and accepted it. No further action required.

	If "Yes" Go To	If "No" Go To
<u>1.</u> Is a public water supply well located within 2000 feet of the leak or discharge site, or is the site located within wellhead protection zones 1 or 2 of a public water supply well?	12	<u>2</u>
<u>2.</u> Is the leak or discharge site located in or over a sand and gravel deposit?	2A	<u>3</u>
<u>2A.</u> Is the entire area, within a 2000 foot radius of the leak or discharge site, a non-attainment zone ?	2B	12
<u>2B.</u> Is there potential for vapor problems within buildings or for a confined space fire or explosion hazard?	13	11A
<u>3.</u> Was the release directly into bedrock or is the bedrock groundwater system contaminated?	9	<u>4</u>
<u>4.</u> Was the release directly into a glacial till deposit?	9	<u>3</u>
<u>5.</u> Was the release into a silt or clay deposit?	<u>6</u>	N/A
<u>6.</u> Is there at least 10 feet of silt and/or clay between the contaminated zone and underlying more permeable surficial deposits (such as glacial till or sand and gravel) or bedrock?	<u>7</u>	9
<u>7.</u> Are the area's gradients approximately horizontal (topographic gradient flat or groundwater gradient <1%)?	<u>8</u>	9
<u>8.</u> Does the seasonal low of the water table fall below the top of the underlying aquifer (sand and gravel deposit or bedrock)? If unknown, the answer is yes.	<u>9</u>	10
<u>9.</u> Is the area within 2000 feet downgradient or 1000 feet upgradient served by a public water supply ?	<u>10</u>	12
<u>10.</u> Is there potential for vapor problems within buildings or for a confined space explosion hazard?	13	<u>11</u>
<u>11.</u> Is the entire area, within a 2000 foot radius of the leak or discharge site, a non-attainment zone ?	<u>11A</u>	13
<u>11A.</u> Is the site now or in the past been in a predominantly industrial land use?	<u>14A</u>	14B

Check clean-up goal decided upon:

12. Stringent (ST) Clean-Up Goals Remove all free product. Remove or remediate contaminated soil containing greater than 10 ppm total fuel oil or kerosene, or 5 ppm total gasoline as determined by DEP-approved laboratory methods. Remediate groundwater containing greater than 50 ug/l total hydrocarbons (gasoline, kerosene, or fuel oil by DEP approved laboratory analytical methods or field techniques), 50 ug/l MTBE, and 5 ug/l benzene by DEP or EPA approved methods.
13. Intermediate (IN) Clean-Up Goals Remove all free product. Remove or remediate contaminated soil containing greater than 10 mg/kg total fuel oil or kerosene, or 5 mg/kg total gasoline as determined by DEP-approved laboratory methods or equivalent DEP-approved field techniques.
- X 14A. Baseline-1 (BL1) Goals Remove all free product. Remove or remediate soil saturated with gasoline, kerosene, or fuel oil.
- 14B. Baseline-2 (BL2) Goals Remove all free product. Remove or remediate contaminated soil to: 500-1,000 ppm gasoline or 200-400 ppm heating oil or kerosene, each as measured by the DEP field headspace analysis or its Department approved equivalent field method.
- Other (Specify): _____ Complete justification below.

Note: Where there is significant uncertainty regarding the identity of the product, the lower oil standards shall apply; and, in the stringent category, groundwater shall be analyzed for MTBE and benzene.

JUSTIFICATION OF ALTERNATE CLEAN-UP GOAL:

NOTE: This form must be included in the case's Spill Report if completed by Division of Response Services staff. Other Bureau staff must include this documentation in the project file.

IV. NARRATIVE

Tank corrosion caused the discharge of approximately one half gallon of #2 heating fuel to the cement basement floor of a residence in Lewiston. The hole was plugged by a burner tech and spilled product absorbed with wood chips and the floor was cleaned with sand. No other items impacted by the leak. Tank replacement occurred the following day.

User Questionnaire
ASTM E 1527-05 Phase I Environmental Site Assessment

In order to qualify for one of Landowner Liability Protections (LLP) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user of the Phase I Environmental Site Assessment must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

Site Name: Leblanc cleaners

Ransom Project No. 131.06099

Ransom Environmental Professional: Daniela Rossi / Erikson Phenix

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25)

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

Yes _____ No X (if Yes, provide additional information on attachment)

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26)

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Yes _____ No X (if Yes, provide additional information on attachment)

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes X No _____ (if Yes, provide additional information on attachment)

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29)

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Yes _____ No X (if No, provide additional information on attachment)

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as a user,

- a) Do you know the past uses of the property? Yes X No
- b) Do you know of specific chemicals that are present or once were present at the property?
Yes X No
- c) Do you know of spills or other chemical releases that have taken place at the property?
Yes No X
- d) Do you know of any environmental cleanups that have taken place at the property?
Yes No X

(If Yes for any of these questions, provide additional information on attachment)

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

Yes X No X (if Yes, provide additional information on attachment)

User:

The following user was interviewed to complete this questionnaire:

Name: Alfred LeBlanc

Title: President

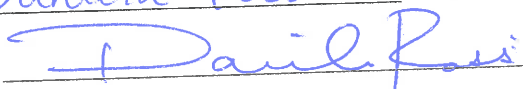

Firm: LeBlanc's Cleaners

Relationship to Site: Operator

Interviewer:

The following Ransom staff completed the interview:

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

EXECUTIVE SUMMARY

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2014 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2014 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2014 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ME SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Uncontrolled Hazardous Substance Sites Program List of Investigations.

A review of the ME SHWS list, as provided by EDR, and dated 01/15/2015 has revealed that there is 1 ME SHWS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

ME LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Protection's Hazardous Material and Oil Spill System Database (H.O.S.S.).

A review of the ME LUST list, as provided by EDR, and dated 01/31/2015 has revealed that there are 24 ME LUST sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 3 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US BROWNFIELDS:

Recipient name: Lewiston, City of
Grant type: Assessment
Property name: FORMER SUNOCO STATION
Property #: Not reported
Parcel size: .35

Actual:
253 ft.

Property Description: The Site was developed for commercial use as a gasoline station and service center in 1958. Prior to 1958 the property was undeveloped. The service station was equipped with two garage bays with an in ground hydraulic lift in the western bay. The gasoline station was run out of an office portion of the site building to the west of the service area, two gasoline pumps were located on a single pump island located to the north of the building parallel to Sabattus Street. The building has been occupied since 1985. Gasoline USTs removed in 1991 and 1996. Building demolished in July 2011.

Recipient name:	Lewiston, City of
Grant type:	Assessment
Property name:	FORMER SUNOCO STATION
Property #:	Not reported
Parcel size:	.35
Property Description:	The Site was developed for commercial use as a gasoline station and service center in 1958. Prior to 1958 the property was undeveloped. The service station was equipped with two garage bays with an in ground hydraulic lift in the western bay. The gasoline station was run out of an office portion of the site building to the west of the service area, two gasoline pumps were located on a single pump island located to the north of the building parallel to Sabattus Street. The building has been occupied since 1985. Gasoline USTs removed in 1991 and 1996. Building demolished in July 2011.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/16/2014	Source: EPA
Date Data Arrived at EDR: 01/08/2015	Telephone: N/A
Date Made Active in Reports: 02/09/2015	Last EDR Contact: 01/08/2015
Number of Days to Update: 32	Next Scheduled EDR Contact: 04/20/2015
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/16/2014	Source: EPA
Date Data Arrived at EDR: 01/08/2015	Telephone: N/A
Date Made Active in Reports: 02/09/2015	Last EDR Contact: 01/08/2015
Number of Days to Update: 32	Next Scheduled EDR Contact: 04/20/2015
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/16/2014	Source: EPA
Date Data Arrived at EDR: 01/08/2015	Telephone: N/A
Date Made Active in Reports: 02/09/2015	Last EDR Contact: 01/08/2015
Number of Days to Update: 32	Next Scheduled EDR Contact: 04/20/2015
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 02/27/2015
Number of Days to Update: 94	Next Scheduled EDR Contact: 06/08/2015
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 07/21/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 10/07/2014	Telephone: 703-603-8704
Date Made Active in Reports: 10/20/2014	Last EDR Contact: 01/09/2015
Number of Days to Update: 13	Next Scheduled EDR Contact: 04/20/2015
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 02/27/2015
Number of Days to Update: 94	Next Scheduled EDR Contact: 06/08/2015
	Data Release Frequency: Quarterly

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/25/2015

DEL HWS: Sites Removed from the Uncontrolled Sites List

Sites are removed from the List once it is determined that they are not "worthy of listing". This term is used as there are a number of reasons to remove a site from the List, including: no file exists, the site was reported as an oil spill, there is no evidence of a hazardous substance release or based on an investigation the site is referred to another program unrelated to hazardous substance or hazardous waste. Sites are removed on a case by case basis. The USP intends this to be an on-going process, as time and resources allow.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

Longitude (West):	70.1969 - 70° 11' 48.84"
Universal Transverse Mercator:	Zone 19
UTM X (Meters):	404200.8
UTM Y (Meters):	4883660.0
Elevation:	248 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	44070-A2 LEWISTON, ME
Most Recent Revision:	1979

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

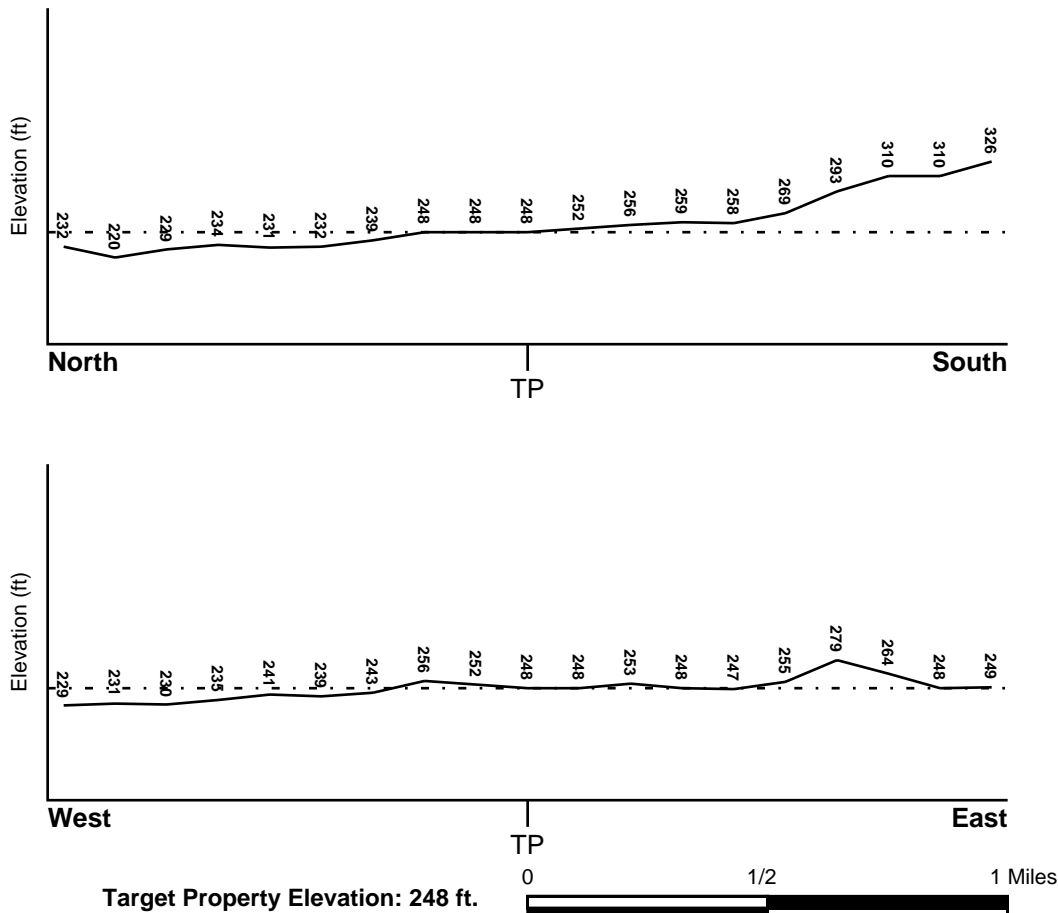

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u>	<u>FEMA Flood Electronic Data</u>
ANDROSCOGGIN, ME	Not Available

Flood Plain Panel at Target Property: Not Reported

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
LEWISTON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HARTLAND

Soil Surface Texture: very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14.11 Min: 4.23	Max: 6 Min: 3.6
2	9 inches	18 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14.11 Min: 4.23	Max: 6 Min: 3.6
3	18 inches	27 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14.11 Min: 4.23	Max: 6.5 Min: 5.1

	Upper	Lower		AASHTO Group	Unified Soil		
4	27 inches	44 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14.11 Min: 4.23	Max: 6.5 Min: 5.1

Soil Map ID: 2

Soil Component Name: BUXTON

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Source: Office of Geographic Information Systems

Telephone: 207-287-6144

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

RADON

Maine Radon Test Results

Source: Department of Human Services

Telephone: 207-287-5698

The state of Maine Radiation Control Program's - Radon/Indoor Air Quality Section's position on radon map, is that they should be used neither to predict the presence of high nor low values in any given geographic or geologic area. The only conclusion that should be drawn from this data is that radon is omnipresent in the soil gasses in the state of Maine, and therefore all residences and buildings that come in contact with the ground should be tested for radon.

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Contact: Daniela Rossi

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ransom Env. Consultants, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

An aerial photograph of a suburban neighborhood. In the center-left, a school complex is highlighted with a red outline. It includes a large rectangular building, a smaller building, and a parking lot filled with cars. To the left of the school is a green sports field with a baseball diamond and a basketball court. To the right is a large oval-shaped track. The surrounding area consists of residential streets with houses and trees. A black arrow points from the 'Site Location' text box to the school complex.

Qualifications

Phase I Environmental Site Assessment
Leblanc Cleaners
10 Lafayette Street
Lewiston, Maine

EDUCATION

B.S. in Earth and Environmental Science,
Lehigh University, 2014

B.A. in Political Science
Lehigh University, 2014

PROFESSIONAL REGISTRATIONS

- 40-Hour OSHA HAZWOPER Training, with annual refreshers
- Adult and Pediatric First Aid, CPR, AED

GENERAL BACKGROUND

At Ransom, Daniela is responsible for conducting many environmental field activities. She oversees drilling projects to assess subsurface soil and groundwater conditions and the installation of groundwater monitoring wells. Daniela frequently conducts soil, groundwater, and surface water sampling activities. In addition, she completes Phase I and Phase II ESA investigations which include historical and regulatory research, assessment, and reporting.

Daniela brings to Ransom her experience in a number of fields, including implementing a science curriculum for grade-school children in Costa Rica; researching the use of agrochemicals in Panamanian banana plantations; and working with senior citizens, including teaching English as a second language, helping navigate the healthcare system, and promoting gardening and nutrition.

EDUCATION

**B.S. in Field Ecology and
B.A. in Environmental Science**

The Evergreen State College, Washington, 1996

PROFESSIONAL REGISTRATIONS

- Certified Geologist, Maine, 2009
- Licensed Asbestos Inspector, Maine
- 40-hour OSHA Hazardous Waste and Emergency Response Training
- OSHA 8-hour Annual Refresher Training for Hazardous Waste Operations
- American Red Cross First Aid and CPR

PROFESSIONAL AFFILIATIONS

- National Groundwater Association
- Geological Society of Maine

GENERAL BACKGROUND

As a Project Geologist, Erik Phenix has over ten years of experience in the environmental consulting industry. Erik has performed numerous Phase I and Phase II environmental site assessments and remediation activities in both California and New England for a variety of properties including residential, agricultural, commercial, and industrial. Erik is familiar with a variety of subsurface investigation techniques including hollow-stem auger drilling, direct-push drilling, air-rotary drilling, bedrock coring, and cone penetrometer test (CPT) drilling. Throughout his career, Erik has maintained professional relationships with clients including private sector, city, county, and state agencies. Erik has experience in all areas of project design, permitting, coordination, implementation, analysis, reporting, and project management.
