EXECUTIVE SUMMARY

In April and May 2018, SEARCH conducted a reconnaissance survey to identify above ground historic resources within the indirect and direct Areas of Potential Effect (APEs) of the New England Clean Energy Connect (NECEC) Project (Project). NECEC will deliver renewable energy from Hydro-Quebec to the New England Control Area. Federal review is undertaken by the U.S. Department of Energy (DOE; lead agency) and the U.S. Army Corps of Engineers (USACE; lead agency). State review is undertaken by the Maine Department of Environmental Protection (MDEP), the Maine Public Utilities Commission (MPUC), and the Maine Land Use Planning Commission (LUPC).

The proposed Project is 322.4 kilometers (km) (200.4 miles [mi]) long, crosses portions of seven counties, 24 municipalities, and 15 unorganized territories within the State of Maine, and is composed of new and rebuilt transmission lines and their associated substations. The Project extends from the Canadian border to the Surowiec Substation in Pownal and from the Coopers Mills Substation in Windsor to the Maine Yankee Substation in Wiscasset. The indirect APE for the Project was determined by Maine Historic Preservation Commission (MHPC) to consist of a 0.8 km (0.5 mi) buffer on either side of the Project centerline (CL). The direct APE was determined by MHPC to consist of the entire right-of-way (ROW) width or facility footprint where ground-disturbing activities could take place.

A scope of work (SOW) for the reconnaissance survey was approved by the MHPC on September 7, 2017; however, that SOW was modified at the request of the MHPC during a project consultation meeting on July 12, 2018. An *Above Ground Historic Resources Survey Identification Report* was submitted by SEARCH to MHPC in August 2018. This report updates those results.

The reconnaissance survey identified 1,543 above ground historic resources within the Project APE. Twenty-four of these resources were surveyed multiple times, bringing the total number of unique resources identified to 1,519. Of 1,519 resources:

- 1,100 resources are determined or recommend not eligible for the NRHP
- 419 resources are listed, eligible, or recommended eligible for the NRHP either individually or as part of a district:
 - 129 previously identified resources, which have been listed or determined NRHP eligible
 - 105 resources which compose 77 historic properties were previously determined eligible by MHPC
 - 24 resources which compose nine historic properties are listed in the NRHP
 - 290 resources are recommended eligible for the NRHP.

This report summarizes the findings of the reconnaissance survey, makes National Register of Historic Places (NRHP) recommendations, and makes a Finding of Effect for those resources identified as NRHP-eligible. The Finding of Effect analysis was utilized to determine what impact the Project will have on resources that are recommended NRHP-eligible. The Finding of Effects is submitted within this report, and is summarized below.

- Finding of Effects recommendation for the 419 historic resources:
 - 88 historic resources will be directly and indirectly affected
 - 69 historic resources will not be adversely affected
 - 19 historic resources which compose four properties will be adversely affected
 - One property was determined eligible and three are recommended eligible
 - 331 historic resources will be indirectly affected; none of these effects will be adverse.

1.0 RESEARCH DESIGN AND BACKGROUND RESEARCH

1.1 BASIS

In April and May 2018, SEARCH conducted a reconnaissance survey to identify above ground historic resources within the New England Clean Energy Connect (NECEC) Project (Project). The Project was proposed by Central Maine Power Company (CMP) in response to the Request for Proposals for Long-Term Contracts for Clean Energy Projects, dated March 31, 2017, and issued by the Massachusetts Department of Energy Resources and the Electric Distribution Companies of Massachusetts. NECEC will deliver clean energy from Quebec-based sources to the New England Control Area.

The survey was initiated by CMP, and SEARCH was contracted to perform the cultural resources consultation services. This survey and report are part of consultation in compliance with Section 106 of the National Historic Preservation Act (NHPA) and the Maine Site Location of Development Act. Federal review is undertaken by the US Army Corps of Engineers (USACE; lead agency) and the US Department of Energy (DOE; lead agency). State review is undertaken by the Maine Department of Environmental Protection (MDEP), Maine Public Utilities Commission (MPUC), and Maine Land Use Planning Commission (LUPC).

These laws require the identification of historic properties possibly affected by the undertaking. A historic property is “a prehistoric or historic district, site, building, structure, or object included in or eligible for inclusion in the NRHP.” (NHPA 36 CFR Part 800).” Further, under the Maine Site Law a “historic site” is “any site, structure, district or archaeological site which has been officially included on the National Register of Historic Places and/or on the Maine Historic Resource Inventory, or which is established by qualified testimony as being of historic significance.” This report identifies existing historic properties and historic sites, including historic districts, buildings, structures, or objects within the Project Area of Potential Effect (APE) that are 50 years of age or older. Based on consultation with the MHPC, the direct APE will be composed of the entire right-of-way (ROW) width or facility footprint where ground-disturbing activities are proposed to take place and the indirect APE will be a 0.5-mile (0.8 km) buffer from the Project centerline (CL).

1.2 SCOPE OF WORK

The goals of the reconnaissance survey and report are to accomplish the following, relative to the NECEC direct and indirect APEs:

- (1) Identify known historic properties and relocate during field survey.

- (2) Conduct supplemental background research at the Maine Historic Preservation Commission (MHPC) to identify previously recorded above ground historic resources on file with MHPC for relocation during field survey.
- (3) Locate above ground resources over 50 years of age not previously identified.
- (4) Verify or collect locational data for previously identified historic properties, previously identified historic resources, and newly identified historic resources.
- (5) Establish which properties and resources the Project could have an effect upon, either directly or indirectly.
- (6) Make National Register of Historic Places (NRHP) eligibility recommendations for all identified resources.
- (7) Make a determination of Finding of Effects on those resources identified as recommended NRHP eligible.

Previous Surveys of Above Ground Historic Resources

Thirty- eight previous surveys and four existing NRHP nominations of the above ground historic resources are associated within the Project APE. These surveys and nominations identified 438 resources across 19 towns and seven counties (**Table 1-1**). The count includes 21 duplicate and 417 unique resources. Previously recorded resources within the Project are summarized in **Table 1-2**.

Prior to this reconnaissance survey and report, no above ground surveys were performed for the Project; however, a Sensitivity Assessment and Scope of Work (SOW) was submitted to and approved by the MHPC in September 2017 (Freedman et al. 2017). This report reviewed the historic contexts and assessed the currently inventoried property types for each county within the Project's indirect APE.

1.3 PROJECT DESCRIPTION

The proposed Project is approximately 322.4 kilometers (km) (200.4 miles [mi]) long, crossing portions of 24 municipalities and 15 unorganized territories within the State of Maine (**Figure 1-1**). The proposed Project primarily consists of three distinct pieces of electric transmission infrastructure (see **Figure 1-1**; **Table 1-3**).

Table 1-3. NECEC Project Summary.

Component	Segment	Area/ROW Width	Existing Conditions	Length
Coopers Mills Substation	Coopers Mills to Maine Yankee	N/A*	Existing Substation	N/A*
345 kV Line	Coopers Mills to Maine Yankee	167 m (550 ft)	Partially developed ROW	42.6 km (26.5 mi)
Maine Yankee Substation	Coopers Mills to Maine Yankee	N/A*	Existing Substation	N/A*
Section 64 Rebuild	Larrabee to Surowiec	107 m (350 ft)	Existing Corridor	15.0 km (9.3 mi)
Section 62 Rebuild	Larrabee to Surowiec	122 m (400 ft)	Existing Corridor	25.9 km (16.1 mi)
Fickett Road Substation	Larrabee to Surowiec	2.5 ha (6.1 ac)	New Facility	N/A*
345 kV Line	Larrabee to Surowiec	122 m (400 ft)	Partially developed ROW	0.4 km (0.3 mi)
Surowiec Substation	Larrabee to Surowiec	N/A*	Existing Substation	N/A*
HVDC Line	Wyman to Larrabee Road	122 m (400 ft)	Partially developed ROW	115.1 km (71.5 mi)
HVDC Line	Wyman to Larrabee Road	232 m (700 ft)	Partially developed ROW	<0.5 km (<0.3 mi)
Converter Station	Wyman to Larrabee Road	2.8 ha (7.0 ac)	New Facility	N/A*
345 kV Line	Wyman to Larrabee Road	122 m (400 ft)	Partially developed ROW	1.9 km (1.2 mi)
Larrabee Road Substation	Wyman to Larrabee Road	N/A*	Existing Substation	N/A*
HVDC Line	Quebec to Wyman	91 m (300 ft)	New Corridor	86.3 km (53.6 mi)
HVDC Line	Quebec to Wyman	91 m (300 ft)	Partially developed ROW	35.2 km (21.9 mi)

Component	Segment	Area/ROW Width	Existing Conditions	Length
Wyman Hydro	Quebec to Wyman	N/A*	Existing Hydropower Station	N/A*
Raven Farm Substation	Transformer installation	N/A*	Existing Substation	N/A*
Total (Area)		5.3 ha (13.1 ac)	Total (Length)	322.4 km (200.4 mi)

**Existing facility—no ground disturbance outside of existing footprint. No impact to cultural resources. Not considered further in this report.*

The first segment of infrastructure extends from the Canadian border to Lewiston; the second piece extends from Lewiston to Pownal; and the third is between Windsor and Wiscasset. A new 345 kilovolt (kV) transmission line will connect the converter station to the existing Larrabee Road Substation in Lewiston. South of the Larrabee Road Substation, two existing 115 kV transmission lines (Sections 62 and 64), terminating at the Surowiec Substation in Pownal, will be rebuilt. A new substation will be constructed adjacent to the Surowiec Substation on Fickett Road, and a 345 kV transmission line will connect the two substations.

1.4 AREA OF POTENTIAL EFFECT

The APE for direct and indirect Project impacts was established through consultation with MHPC. This consultation resulted in the establishment of an indirect APE that consisted of a 0.8 km (0.5 mi) buffer around the Project centerline (CL) within the State of Maine (Megan Hopkin, personal communication 2017). The direct APE will be composed of the entire right-of-way (ROW) width or facility footprint where ground-disturbing activities could take place (see **Table 1-3**). **Figure 1-1** shows the location of the Project APE on topographic mapping. Detailed maps that depict both the direct and indirect APEs relative to survey results appear in **Appendix A**.

1.5 SURVEY BOUNDARIES

This survey identified above ground historic resources within the direct and indirect APEs that were visible from public ROWs or the proposed transmission corridor. Section 1.2, above, provides a narrative description of the Project route. Detailed maps, which show the survey boundary (in this case, the extents of the indirect APE), are presented in **Appendix A**.

1.6 METHODOLOGY

Survey Methodology

SEARCH followed the standard of the *MHPC Architectural Survey Report Form* for the completion of this report. However, some section titles and content order are slightly modified per consultation with MHPC at the July 12, 2018 meeting in Augusta. The survey methodology followed guidelines set by MHPC's *Above Ground Resources Survey Manual*. Prior to fieldwork, a review of previously recorded resources that are uploaded to MHPC's Cultural Architectural Resource Management Archive (CARMA) was conducted and reported to MHPC as part of the NECEC's Sensitivity Assessment and SOW (Freedman et al. 2017). Prior to field survey, a review of MHPC's survey and National Register of Historic Places (NRHP) files was conducted at the Commission's offices in April 2018. This research identified properties within the indirect APE

that are listed or eligible for listing in the NRHP. The site file research also identified properties that were determined not eligible for the NRHP, properties without a determination of eligibility, and surveyed properties not yet entered into CARMA. This review ensured that all previously identified resources, associated survey forms, and geographic information system (GIS) data were utilized in the field during the reconnaissance survey.

Field methods were designed to examine the direct and indirect APE in order to: (1) relocate previously recorded above ground historic resources; (2) identify previously undocumented resources 50 years old or older; and (3) consider NRHP eligibility of identified above ground historic resources within the Project area. Fieldwork was conducted by Jenna Dunham (Architectural Historian), Maureen Bowman (Architectural Historian), and Tricia Peone (Historian) from April to May 2018. A driving or windshield survey covered all public roads within the direct and indirect APE in order to examine existing buildings, structures, landscapes, and other aspects of the built environment. Above ground historic resources that appeared to meet the National Register criteria threshold age of 50 years old or older were photographed and noted. The locations of these resources were documented by Global Positioning System (GPS), noted on field maps, and described in photograph logs, including physical property addresses where possible. Surveyors recorded an approximate address when no physical address was clearly visible. Upon completion of fieldwork, the data were processed and analyzed at SEARCH offices. Field photographs were geo-tagged, GPS points were examined for spatial accuracy, field logs were transcribed, and the resulting data sets were incorporated into the SEARCH architectural history GIS for the proposed Project. Following the processing of field data, all identified resources were reviewed to confirm that these are at least 50 years of age utilizing property data and reviewing historic maps (historicaerials.com). Resources less than 50 years of age were removed from the Project data set. The remaining resources were reviewed individually to determine overall integrity and whether sufficient data were gathered to recommend NRHP eligibility.

NRHP Evaluation

Using the standards described in *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation* (U.S. Department of the Interior 1995) and *National Register Bulletin 16: How to Complete the National Register Registration Form* (U.S. Department of the Interior 1997) and the data gathered from the reconnaissance inventory process, SEARCH applied NRHP significance and integrity criteria to refine the evaluations of the resources identified as historic properties in the Reconnaissance Report (SEARCH 2018). This evaluation determined if the resources located in the direct and indirect APEs are eligible for listing in the NRHP.

For the NRHP, there are five categories of historic properties: buildings, structures, objects, sites, and districts (U.S. Department of the Interior 1995:4-5). To be eligible for listing in the NRHP, a building, structure, object, site, or district must represent a significant part of the history, architecture, archaeology, engineering, or culture of an area (U.S. Department of the Interior 1995:7). The significance of a building, structure, object, site, or district can only be

determined when evaluated within its historic context. The following four Criteria for Evaluation describe how properties are significant within their historic context for their association with important events or persons, for their importance in design or construction, or for their information potential. According to 36 CFR 60, a building, structure, object, site, or district may be eligible for listing in the NRHP if it meets at least one of the four following criteria:

- A. is associated with events or activities that have made a significant contribution to the broad patterns of our history; or
- B. is associated with the lives of persons significant in our past; or
- C. embodies the distinctive characteristics of a type, period, or method of construction, or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components may lack individual distinction; or
- D. has yielded, or may be likely to yield, information important in prehistory or history.

The buildings, structures, objects, sites, and districts documented during the survey were evaluated according to the NRHP criteria.

Certain types of buildings, structures, objects, sites, and districts are not typically evaluated for listing in the NRHP: religious properties, moved properties, birthplaces and graves, cemeteries, reconstructed properties, commemorative properties, and properties less than 50 years old unless they fall within one of the following criteria considerations (U.S. Department of the Interior 1995:25):

- A. a religious property deriving primary significance from architectural or artistic distinction or historical importance; or
- B. a building or structure removed from its original location but which is primarily significant for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or
- C. a birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life; or
- D. a cemetery which derives its primary importance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events; or
- E. a reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or
- F. a property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or
- G. a property achieving significance within the past 50 years if it is of exceptional importance.

NRHP-eligible districts must possess “a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development” (US Department of the Interior 1997:5).

A property can meet one or more of the criteria for listing in the NRHP and represent a historic context, but it must also have integrity. *National Register Bulletin 15* defines integrity as “the ability of a property to convey its significance” (US Department of the Interior 1995:44).

The NRHP criteria recognize seven aspects or qualities that, in various combinations, define integrity:

- Location — the place where the historic property was constructed or the place where the historic event occurred
- Design — the combination of elements that create the form, plan, space, structure, and style of a property
- Setting — the physical environment of a historic property
- Materials — the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property
- Workmanship — the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory
- Feeling — a property’s expression of the aesthetic or historic sense of a particular period of time
- Association — the direct link between an important historic event or person and a historic property

If a property retains all or most of these aspects or qualities, it retains integrity. There is also recognition that, over time, a property will change. Although it may not be necessary for a property to retain all of its physical features, “[t]he property must retain ... the essential physical features that enable it to convey its historic identity. The essential physical features are those features that define why a property is significant, and when it was significant” (US Department of the Interior 1995:46).

Finding of Effects

In order to evaluate the undertaking’s effects on historic properties within the APEs, SEARCH applied the criteria of adverse effects in compliance with 36 CFR 800.5. An adverse effect occurs when an undertaking may directly or indirectly alter any of the characteristics of a historic property that qualify the historic property for inclusion in the NRHP, particularly when the alteration would diminish the integrity of the historic property’s seven aspects of integrity: location, design, setting, materials, workmanship, feeling, or association. As listed in 36 CFR 800.5, adverse effects on historic properties include, but are not limited to:

- Physical destruction of or damage to all or part of the property;

- Alteration of a property, including restoration, rehabilitation, repair, maintenance, stabilization, hazardous material remediation and provision of handicapped access, that is not consistent with the Secretary of the Interior's *Standards for the Treatment of Historic Properties* (36 CFR Part 68) and applicable guidelines;
- Removal of the property from its historic location;
- Change of the character of the property's use or of physical features within the property's setting that contributes to its historic significance;
- Introduction of visual, atmospheric, or audible elements that diminish the integrity of the property's significant historic features;
- Neglect of a property that causes its deterioration, except where such neglect and deterioration are recognized qualities of a property of religious and cultural significance to an Indian tribe or Native Hawaiian organization; and
- Transfer, lease, or sale of property out of Federal ownership or control without adequate and legally enforceable restrictions or conditions to ensure long-term preservation of the property's historic significance.

Once the historic properties were identified, publicly available parcel data were imported into the Project GIS. Parcels where above ground historic resources were located were analyzed to determine if they could be affected by the Project. For example, a resource that was located on a parcel that intersected the NECEC direct APE was considered to be directly affected by the Project. A resource that was located on a parcel that intersected the land cover viewshed was considered to be indirectly affected because the Project may be visible from one or more locations on a parcel. The viewshed analysis was performed using the land cover viewshed model created by Terrance J. DeWan & Associates (TJD&A) for the NECEC Visual Impact Assessments (VIA). Detailed information on this product can be found in Section 6.0 of the NECEC Site Law Application filed with the MDEP in September 2017. Viewshed impacts are depicted on the Figures provided in **Appendix A**. The Figures show those resources that have an existing viewshed of the current transmission line, and will have an increased view of the Project. These resources are labeled as "Existing and Increased Viewshed Impact" and "Viewshed Impact (Existing and Increased)" Resources that do not currently have a view of the transmission line, but will have a new visual element as a result of the Project are labeled as "Viewshed Impact (Proposed)" and "New Viewshed Impact." The results of this analysis were used to determine if the project had the potential to affect each resource, and if that effect would have an impact on the resource's NRHP eligibility. SEARCH utilized the criteria of effect and criteria of adverse effect, as defined in the MHPC's *Review and Compliance Above Ground Cultural Resource Survey Manual, Guidelines for Identification: Architecture and Cultural Landscapes* (2013):

Criteria of effect. To have an effect, the undertaking must have the potential to alter the characteristics of a property that qualify it for the National Register; such characteristics may include a property's design, materials, workmanship, feeling, association location, or setting.

Criteria of adverse effect. If an agency determines that an undertaking will have an effect on a historic property, it must then assess whether or not the effect will be adverse by applying the criteria of adverse effect. [36 CFR 800.5] If the potential activity could diminish the integrity of the characteristics of a property that qualify it for the National Register it is considered to have an “adverse effect.”

2.0 SURVEY FINDINGS

2.1 ACRES

The direct and indirect APEs for the NECEC Project cover a total of 52,898 hectares (ha) (130,714 acres [ac]). The Project APE is depicted in detail in **Appendix A**. This survey identified above ground historic resources within the direct and indirect APEs that were visible from the public ROWs and/or the proposed transmission corridor.

2.2 SETTING

The NECEC Project area crosses seven of Maine's 16 counties (Franklin, Somerset, Androscoggin, Cumberland, Kennebec, Lincoln, and Sagadahoc) and continues through 24 municipalities and 15 unorganized territories. The majority of the proposed route is within existing power transmission corridor ROWs and is composed of a combination of new and rebuilt transmission lines that extend from the Canadian border to the Surowiec Substation in Pownal, crossing Franklin, Somerset, Androscoggin, and Cumberland counties in western and central Maine. A second proposed transmission line would extend from the Coopers Mills Substation in Windsor to the Maine Yankee Substation in Wiscasset, crossing Kennebec, Lincoln, and Sagadahoc Counties in Coastal Maine.

After crossing the US-Canadian border in Franklin County, the Project passes through (from north to south) Beattie Township, Lowelltown Township, and Skinner Township. Entering Somerset County, the Project continues through Appleton Township, T5R6 Township, T5R7 Township, Hobbstown Township, Bradstreet Township, Parlin Pond Township, Johnson Mountain Township, West Forks Plantation, Moxie Gore, The Forks Plantation, Caratunk, Bald Mountain Township, Moscow, Concord Township, Bingham, Embden, Anson, and Starks. Entering Franklin County again, the Project passes through Industry, New Sharon, Farmington, Wilton, Chesterville, and Jay. The Project then crosses into Androscoggin County and passes through the towns of Livermore Falls, Livermore, Leeds, Greene, Lewiston, Auburn, and Durham before entering Cumberland County to terminate in Pownal at the Surowiec Substation. The Project area, for the second proposed transmission line from Coopers Mill Substation to the Maine Yankee Substation, begins in Windsor in Kennebec County before entering Lincoln County and passing through the towns of Whitefield, Alna, and Wiscasset. The route leaves Wiscasset briefly to enter a small portion of Woolwich in Sagadahoc County and then reenters Wiscasset.

The Project area passes through rural farmlands and unorganized townships, as well as urban areas. Early European explorers of the coastal region included Samuel de Champlain, who explored the coast for France in 1604 and mapped the Gulf of Maine. During his expedition, Champlain explored rivers and bays, including the Kennebec River. In the early seventeenth

century, both the English and the French were engaged in the fur trade with Native Americans along the coast, and both empires claimed the territory. As a result of ongoing warfare between England, France, and Native Americans, forts and garrisons were constructed along Maine's coast during the seventeenth and eighteenth centuries, including Fort St. George at the mouth of the Kennebec River (Hornsby et al. 2015). In 1607, the Plymouth Company attempted to establish a permanent English settlement at the mouth of the Kennebec River. A group of 100 colonists led by George Popham and Raleigh Gilbert built a fort (Fort St. George) and several buildings, but by the winter of 1607, half of the colonists had returned to England. The colony at Sagadahoc failed after a year (Beckenstein 2004).

Several towns in the Project area are connected by the Kennebec and Androscoggin rivers, waterways that played a significant role in their development. The Androscoggin River joins the Kennebec at Merrymeeting Bay. Much of the land along the lower Androscoggin was contained in the Pejepscot patent, and English colonists were settling in that area since the early seventeenth century. The proprietors of the Kennebec patent claimed most of the Kennebec valley in the mid-eighteenth century. Settlements to the north and west commenced after the British defeated the French in the Seven Years' War (1754–1763). In exchange for military service during the war, land grants in Maine were given out by the government of Massachusetts. Large land grants were often subject to competing claims throughout this period of early settlement in Maine (Hornsby et al. 2015:14).

Fishing and shipbuilding were historically important industries for communities on the Kennebec River (Hornsby et al. 2015:32). English fishermen were seasonal visitors to coastal Maine with fishing fleets prior to the establishment of permanent colonies. The New England fishing industry developed in coastal towns in the mid-seventeenth century, making fish a staple of the New England economy. Along with fishing, shipping and shipbuilding developed as integral parts of Maine's (and New England's) economy. Maine timber was used to build ships in coastal Maine shipyards; merchants then exported fish caught by Maine fishermen to other parts of the British Empire. The Kennebec and Androscoggin rivers were also important travel routes into Maine's interior, before and after the arrival of railroads.

Logging was historically important industry for communities on the Kennebec and Androscoggin Rivers. In 1820, Lincoln County had 115 sawmills, Kennebec County had 87, Cumberland County had 79, and Somerset had 43 (Hornsby et al. 2015:31). The Kennebec River saw the second largest log drives in Maine, and by the 1830s, several logging companies were operating on the river (Wilson 2001:53). In the nineteenth century, logging became intensive along many of Maine's rivers, and by the end of the century, concern over the negative consequences of industrialization and diminishing natural resources had increased (Judd 2007:9). Log drives on the Kennebec River ended in the 1970s (Begin 2012). Intense industrial pollution of the Androscoggin River helped inspire the Clean Water Act of 1972. Much of the pollution was caused by the paper manufacturing industry beginning in the nineteenth century. By the mid-twentieth century, the Androscoggin was one of the most polluted rivers in the country (Bennett and Nickerson 2007).

As the logging industry in Maine waned, towns switched to recreation and tourism to supplement their economies. The tourism industry began to flourish in Maine in the period after the Civil War (1861–1865). Tourists who visited this area in the second half of the nineteenth century were drawn by the promise of fishing, hunting, canoeing, and hiking through vast tracts of largely undisturbed wilderness (Hornsby et al. 2015:60). Railroads and steamboats transported tourists from all over the country. Steamboats operated on the Androscoggin and Kennebec rivers beginning in the mid-nineteenth century (Bennett and Nickerson 2007; Wilson 2001:57). Steamboats on the Kennebec hauled timber down the river and switched to passengers in the summer (Wilson 2001:58). Sporting camps and grand hotels were constructed near rivers and lakes, such as the famous Mount Kineo House on Moosehead Lake (Farrar 1890). Lake Moxie Camp in the Forks is an early twentieth-century sporting camp within the Project area. Moxie Pond was historically a popular area for trout fishing (Churchward 1898:17).

In Franklin County, the Project area passes through Beattie Township, Lowelltown Township, Skinner Township, Industry, New Sharon, Farmington, Wilton, Chesterville, and Jay. Euro-American settlement of this area did not begin until the late eighteenth century, and Franklin County was established in 1838. The 1887 *Atlas of Maine* shows the organization of Franklin County with several numbered grants and named plantations laid out while towns are clustered in the southern part of the county (Colby 1887). Agriculture was the primary economic activity in Franklin County in the nineteenth century; the principal products grown were wheat, corn, and oats, and livestock was raised (Howard and Crocker 1881:47). Farmington is the county seat, and in addition to agriculture, the town had several carriage and wagon manufacturers in the nineteenth century (Varney 1881:230). Villages in Farmington in the nineteenth century included Farmington Village, Farmington Falls, West Farmington, Fairbanks Mills, Backus Corner, and Knowlton's Corner (Colby 1887). The Maine Central Railroad passes through Farmington Village. The town of Jay was incorporated in 1795 and became an early industrial center because of its location on the Androscoggin and its falls. Pulp and paper manufacturing were the drivers of the industrial economy in Jay by the 1880s (Lawrence 1912:18). Villages within the town of Jay in the nineteenth century included Bean's Corner, North Jay, Jay Hill, and Jay Bridge (Colby 1887). Farmington and Jay are the largest communities that fall within the APE in Franklin County.

In Somerset County, the Project passes through Appleton Township, T5R6 Township, T5R7 Township, Hobbstown Township, Bradstreet Township, Parlin Pond Township, Johnson Mountain Township, West Forks Plantation, Moxie Gore, The Forks Plantation, Caratunk, Bald Mountain Township, Moscow, Concord Township, Bingham, Embden, Anson, and Starks. Somerset County was established in 1809 out of a portion of Kennebec County. The county seat was originally at Norridgewock, but was moved to Skowhegan in the late nineteenth century (Sloane 1998:144). In 1820, Somerset County had a population of 21,787 (Hayward 1839). Agriculture was historically important to the economy of Somerset County. In the 1830s, the county produced more wheat than any other county in Maine (Hayward 1839). The 1887 *Atlas of Maine* shows Somerset County organized into townships, with the northern portion of the county consisting largely of numbered grants and the southern portion consisting

of named towns (Colby 1887). Bingham was established in 1812; by 1880, the town had a population of 828 (Varney 1881:119). Bingham Village was the commercial and industrial center by the late nineteenth century, and local industries included lumber, carriages, and harnesses (Varney 1881:118). Somerset County encompasses several important transportation corridors. The Appalachian Trail passes through Caratunk and the Forks in Somerset County. The Old Canada Road passes through the Somerset County towns of Caratunk, Bingham, Moscow, The Forks, and West Forks. This route is now the Old Canada Road Scenic Byway, a National Scenic Byway that follows a portion of US Route 201 to Quebec. This travel corridor was first used by Native people and then by Euro-Americans in the eighteenth and nineteenth centuries. The Somerset Railroad was constructed through Somerset County to reach Moosehead Lake from Oakland (Kennebec County) in the late nineteenth century, reaching Bingham by 1890 (Benson 2008:73). In the early twentieth century, the railroad became part of the Maine Central rail system (Middleton et al. 2007:639).

In Androscoggin County, the Project area passes through the towns of Livermore Falls, Livermore, Leeds, Greene, Lewiston, Auburn, and Durham. Androscoggin County was established in 1854 out of parts of Cumberland, Oxford, Kennebec, and Lincoln Counties. Many of the towns in Androscoggin County were settled by Euro-Americans in the eighteenth century. By the late nineteenth century, both the Grand Trunk and the Maine Central Railroad passed through Androscoggin County. Livermore Falls was originally part of the village of East Livermore within the town of Livermore on the eastern side of the Androscoggin. East Livermore was incorporated as a separate town in 1843 and included the village of Livermore Falls, which later became the name of the entire town. Sawmills were established on the falls in the late eighteenth century, and lumber became the dominant industry in Livermore Falls along with pulp and paper mills (Merrill 1891:585). The town of Leeds was incorporated in 1801 and included the villages of Curtis Corner, Leeds Centre, North Leeds, and West Leeds (Varney 1881:814). The town of Greene was incorporated in 1788 and remained largely agricultural through the nineteenth century, with some manufacturing in the village of Greene Corner and at Sprague's Mills (Varney 1881:258). By the mid-nineteenth century, Auburn and Lewiston had become the manufacturing centers of the county (Howard and Crocker 1881:18). Textile manufacturing dominated Lewiston from the mid-nineteenth century, and Auburn had 14 shoe factories operating in the late nineteenth century (Varney 1881:82). Large brick mill buildings and a system of canals were constructed at the falls to facilitate manufacturing by the mid-nineteenth century (Varney 1881:321). Lewiston was incorporated as a town in 1795, then as a city in the early 1860s, and is currently the second largest city in Maine after Portland. In Lewiston, the Androscoggin & Kennebec Railroad was built in the first half of the nineteenth century (Colton 1855). The town of Durham was incorporated in 1789, and in the nineteenth century included villages at Durham, South Durham, and West Durham (Colby 1887).

In Cumberland County, the Project area passes through the towns of Cumberland and Pownal. Cumberland County was established in 1764. By the end of the nineteenth century, the Grand Trunk, Maine Central, and Portland & Ogdensburg railroads passed through Cumberland County. The Atlantic & St. Lawrence Railroad was built through Pownal in the first half of the nineteenth century prior to a lease with the Grand Trunk Railroad (Colton 1855). Pownal was

incorporated in 1808 and remained largely agricultural throughout the nineteenth century (Varney 1881:469). Villages within the town of Pownal in the nineteenth century included North Pownal, Pownal Village, and West Pownal (Colby 1887). The Project passes through the village of North Pownal.

In Kennebec County, the Project area passes through the town of Windsor. Kennebec County was established in 1799 out of part of Lincoln County. The county was part of the Kennebec patent, which claimed the Kennebec River from Merrymeeting Bay (Kingsbury and Deyo 1892:79). The town of Windsor was originally incorporated as Malta in 1809 and renamed Windsor in 1822 (Kingsbury and Deyo 1892:1172). Early industries in Windsor were clustered along the Sheepscot River, including sawmills, gristmills, lumber, and later a tannery. In the nineteenth century, villages within the town were Windsor Corner, West Windsor, North Windsor, and South Windsor (Colby 1887). The Project passes through the area that was historically part of South Windsor. The population of Windsor consistently decreased in the second half of the nineteenth century from approximately 1,793 residents in 1850 to only 782 in 1900, but began to increase again in the second half of the twentieth century.

In Lincoln County, the Project area passes through the towns of Whitefield, Alna, and Wiscasset. Lincoln County was established in 1760 and was originally much larger before other counties split off from it. Alna was originally incorporated in 1794 as the town of New Milford (Varney 1881:70). Whitefield was incorporated in 1809, and villages within the town in the nineteenth century included Coopers Mills, North Whitefield, and Kings Mills (Colby 1887). Whitefield was primarily an agricultural community in the nineteenth century, with some manufacturing at Coopers Mills and North Whitefield (Varney 1881:588). Wiscasset was incorporated in 1802, but was part of earlier settlements dating from the seventeenth century as well as the earlier town of Pownalborough (Varney 1881:601). Shipping was historically an important industry in Wiscasset, as it has a deepwater port. Wiscasset is also the county seat.

In Sagadahoc County, the Project area passes through the town of Woolwich. Sagadahoc County was not established until 1854, although Euro-Americans had settled there since the early seventeenth century. Sagadahoc County was formed out of part of Lincoln County with Bath as the county seat. Shipbuilding was an important industry in Sagadahoc County from the eighteenth century on, centered at the city of Bath. The town of Woolwich broke away from Georgetown and was established in 1759. Nineteenth-century villages within the town included Montsweag, Nequosset, and Woolwich Village (Varney 1881:604). Merrymeeting Bay and the Kennebec River form the eastern boundary of the town. The Project area passes through the northeastern corner of Woolwich, which in the nineteenth century fell between the post office village of Montsweag and Wiscasset Village in neighboring Lincoln County (Colby 1877). Historically, agriculture and shipbuilding were the primary industries in Woolwich.

Railroad Development in the Project Area

Between the 1830s and the 1920s, railroad development spread across Maine. The state was a pioneer in railroad development in New England. By the height of railroad development in

1920, Maine had over two thousand miles of railroad, from narrow gauge track to standard gauge track. More than just rails, the railway system of Maine influenced the creation and revival of hundreds of communities across the state and provided market connections that sustained local and state economies for decades (“A Brief History of Maine Railroads” 2018).

Railroad development promised to open up Maine to new development and industry. Railroad companies sought and received charters to organize to build lines in the 1830s. The first line, the Bangor & Piscataquis Canal & Railroad, was completed in 1836 between Bangor and Old Town. The completion of the line was important as this line was only the second in New England. The first was the Boston and Lowell Railroad (“A Brief History of Maine Railroads” 2018).

The railroads of Maine hauled agricultural products, passengers, and, most extensively, timber. While many of the railroads in Maine were built at standard gauge width, narrow gauge railroads were fairly common as well (Moody 1936). Narrow gauge railways primarily moved cut timber from the forest to mills. Due to their slim width, narrow gauge rails could penetrate the challenging terrain in the state and wind their way deep into forests. In addition to timber, narrow gauge rails also connected communities such as the Wiscasset, Waterville & Farmington, completed in 1895, and the Sandy River and Rangeley Lakes, organized in 1891 (Barney 1986). The Kennebec Railroad (Kennebec County), built in the same period, was five miles in length and hauled passengers between Gardiner and Chelsea (Moody 1936). The railroads of Maine also supported the tourism industry as the rails brought visitors deep into the secluded, beautiful corners of the state. Railroad companies often owned hotels, such as the Somerset Railroad which owned the popular Kineo House (Maine Central Railroad Company Records 2018).

Through the nineteenth century, dozens of railroad companies built lines in Maine. The period when individual companies owned one line, however, began to fade as the century progressed. The Maine Central Railroad (MEC) and other companies began to build massive rail systems by buying or leasing shorter lines. The MEC acquired half a dozen lines in the latter half of the nineteenth century and continued its expansion into the twentieth century (Maine Central Railroad Company Records 2018).

Maine’s railway expansion era peaked in the 1920s. The rise of automobiles and the expansion of roadways eclipsed railroads in importance. During this peak decade, the extent of Maine’s railroad network was 2,380 miles. In the following decades, companies began to abandon and dismantle their lines. Despite the transition away from railroads, a variety of railroad stations and lines remain in the state as reminders of the once flourishing railroad landscape of Maine (“A Brief History of Maine Railroads” 2018).

The Maine Central Railroad (MEC)

One of the largest railroad companies in the history of Maine was the Maine Central Railroad. The abbreviation MEC is the official legal recording mark for this railroad. Chartered in 1856,

the company came into operation in 1862 with the merger of two existing lines: the Androscoggin and Kennebec Railroad Company and the Penobscot and Kennebec Railroad Company. The union of these lines created continuous trackage from Auburn (then called Danville) to Bangor. In the future, the company would expand its reach well beyond Maine (Maine Central Railroad Company Records 2018).

Through the second half of the nineteenth century and into the early twentieth century, the MEC built an empire of railroads through acquiring or leasing other companies and their infrastructure. Companies acquired in the nineteenth century were the Dexter and Newport (1869); the Portland and Kennebec (1870); the Somerset and Kennebec (1870); the Leeds and Farmington (1871); the European and North American (1882); and the Portland and Ogdensburg (1888). In the early twentieth century, the MEC continued to grow by incorporating the Sandy River and Rangeley Lakes Railroad (1911); the Somerset Railroad (1911); and the Bridgton and Saco River (1912). The Somerset Railroad acquisition included Mount Kineo House, the popular vacation lodge on Moosehead Lake. By 1917, the total mileage of the MEC was 1,358 miles and its lines reached into Quebec, Vermont, and the White Mountains of New Hampshire (Maine Central Railroad Company Records 2018).

The Maine Central Railroad Company became a transportation conglomerate in the twentieth century, owning trucking, bus, airline, steamboat, and coastal ferry companies, as well as railroad lines, in a period of transportation changes. The company also established Boston-Maine Airways in the 1930s. The advent of automobiles hurt the MEC's waterway and railroad transportation business. By the 1930s, railroad expansion had slowed. The company canceled its steamboat and ferry lines. In the 1940s, the company's airline (then called Northeast Airline) reduced service. Greyhound Corporation bought the MEC's bus line in the 1950s. Passenger service on the MEC ended in 1960. Beginning in the 1980s, ownership of the MEC changed several times. In the present, Guilford Transportation Company owns the MEC (Maine Central Railroad Company Records 2018).

2.3 NUMBER OF RESOURCES RECORDED

A total of 1,543 above ground historic resources were identified during the reconnaissance survey (**Table 2-1**). These resources include 24 duplicates representing 1,519 unique resources which consist of nine historic districts, 58 farmsteads, 354 agricultural buildings, 15 bridges, 12 culverts, four dams, 33 cemeteries, five railroads, and multiple private residences, commercial buildings, and industrial buildings. The total number of resources includes those previously identified and located in the CARMA database or on file at MHPC. The **Survey Matrix**, included in **Appendix B, Table 1**, provides details for all resources recorded within the survey area, including their NRHP status, NRHP recommendations, criteria for listing, integrity, and potential Project impacts.

Table 2-1. Above Ground Resources by Town and County.

County	Town	Resources Identified
Androscoggin	Auburn	7
Androscoggin	Durham	30
Androscoggin	Greene	82
Androscoggin	Leeds	78
Androscoggin	Lewiston	225
Androscoggin	Livermore Falls	109

Somerset	Moscow	57
Somerset	Moxie Gore	1
Somerset	Starks	24
Somerset	The Forks	47
Somerset	Multi	3
Total		1543*

*24 resources were surveyed more than once and represent the same resource. This total represents 1,unique resources.

2.4 PREVIOUSLY INVENTORIED PROPERTIES

A total of 417 unique previously inventoried above ground resources exist within the survey area (**Table 2-2**), including four historic districts. Of these, 24 have been listed in the NRHP either individually or as part of a district. One hundred and five were determined eligible for listing in the NRHP. Two resources were previously determined not individually eligible by MHPC, but SEARCH has recommended these two resources as eligible within a district. The remaining resources were either determined not eligible for listing in the NRHP (222) or without determination from MHPC regarding NRHP eligibility (64).

Of these 64 resources, SEARCH recommends 17 not eligible and 47 recommended eligible for NRHP listing. In addition, demolition or removal of 17 previously recorded resources was confirmed during the field survey. The CARMA survey forms for these resources were updated to note their demolition. The total number of extant previously recorded unique above ground resources within the Project area is 400. Per MHPC guidelines, previously recorded buildings that had undergone alterations, or not entered into CARMA, were updated in MHPC's CARMA system. A summary of all previously recorded resources is included in **Appendix B, Table 2**.

Table 2-2. Previously Recorded Above Ground Resources NRHP Status by Town and County.

County	Town	Resources Identified	NRHP Listed	NRHP Eligible	NRHP Not Eligible	Not Determined
Androscoggin	Auburn	6	0	0	6	0
Androscoggin	Greene	16	0	3	13	0
Androscoggin	Leeds	26	0	6	18	2
Androscoggin	Lewiston	69	1	2	62	4
Androscoggin	Livermore Falls	15	0	7	8	0

Total		438¹	24²	108³	242⁴	64

¹21 duplicate resources included in this count. ²Resources listed either individually or as part of a district.

³Count includes 1 duplicate resource and 2 resources previously determined not individually eligible but recommended eligible as part of a district. ⁴Count includes 20 duplicate resources.

2.5 PROPERTY TYPES

This section outlines the development of the Project area's above ground resource types and provides a summary of the most prominent architectural styles identified within the Project survey area. Resources within the Project area that are highly representative of the region's architectural styles and historic contexts are discussed below, and specific examples are identified by their Survey Map ID (e.g., ID-407).

With the exception of urban development in the larger populated areas, such as Lewiston, Farmington, and Wiscasset, buildings and landscapes from the late eighteenth through the mid-twentieth centuries are preserved and frequently retain integrity within the Project survey area. Overall, the Project survey area consists of interspersed residential developments in rural agricultural areas with commercial areas in village centers. The survey area also includes former industrial areas, including paper and lumber mills. With the increase in the tourism industry in the early twentieth century, some areas developed based upon the tourist economy. This includes recreational facilities, camps, cabins, ski resorts, motels and hotels, and seaside retreats.

Despite industrial and suburban encroachment, representative buildings, structures, and rural landscapes from the late eighteenth through the mid-twentieth centuries are within the viewshed of the proposed Project that retain and convey their integrity of setting, feeling, and historical significance. Residential, seasonal tourist cabins and farm buildings in rural settings maintain a greater degree of design, material, feeling, and location than their suburban counterparts.

Residential Resources

Built resources dating from the late eighteenth century through the present day were noted within the Project survey area. Nearly every architectural style was noted within the Project area, including Federal, Greek Revival, Gothic Revival, Queen Anne, Vernacular, Colonial Revival, Bungalow, Ranch, and Split Level. Colonial period resources were not identified in the field, as the survey was limited to above ground and exterior examination of buildings. Buildings from this period were built of hewn logs and, if extant, were likely incorporated or reused in other buildings (McAlester and McAlester 1984:75).

In rural sections of the Project survey area, individual residences were remote or clustered within a village center. However, in more developed municipalities, such as Lewiston, Auburn, and Wiscasset, residences included single-family residences as well as multi-family homes and apartment buildings.

One of the most common building types in the Project area dating from the eighteenth century through the present is the Cape Cod form. These buildings are typically one or one-and-one-

half stories in height with a side gable roof, central or side brick chimneys, and multi-paned double-hung sash windows. Cape Cod homes can embody any number of characteristics from various architectural styles, from Greek Revival to Colonial Revival. Examples of the Cape Cod form in the Project area include the residences on Coopers Mills Road in Windsor and on Main Street in Anson (ID-1318 and ID-1039). A number of early Cape Cod dwellings were altered, typically with later additions, porches, or dormers.

Greek Revival was the dominant style of American domestic architecture from 1830 to 1850 (McAlester and McAlester 1984:182). Buildings constructed in this style were typically one-and-one-half story and most commonly had a front gable roof, although a side gable roof was not uncommon. Hallmark decorative details include cornice returns, wide bands of trim beneath the roofline, corner boards, and entablatures at entryways with a transom or sidelights. Specific residential examples of Greek Revival architecture include the residence on Madison Street in Anson (ID-1207). The building features a front gable jettied story that is supported by round columns, a classic example of Greek Revival architecture.

Gothic Revival style gained popularity between 1840 and 1870. Andrew Jackson Downing touted this style as ideal for rural areas in the nineteenth century in *The Architecture of Country Houses*. Identifying features of the Gothic Revival style include steeply pitched roofs, often with cross gables, decorative verge-boards, one-story porches, and pointed arch windows (Historic New England 2018). An example of Gothic Revival domestic architecture includes the residence on Frederick Street in Anson (ID-1054). The building features pitched cross gables; however, other decorative characteristics were covered with the application of asbestos siding.

A common residential type throughout the Project area includes the side hall house. As the name implies, the entryway is in a side bay and opens into a side hall. These houses were most often one-and-one-half stories in height with a gable front roof. Often vernacular, these residences had little embellishment or design to link them to a specific architectural style. An example within the Project area was noticed on Philbrick Lane in Whitefield (ID-1386), which also features a wing addition.

Early twentieth-century vernacular cottages and cabins were noted throughout the Project area, particularly in areas known for their recreational attractions, such as the lakes and mountain regions. These were typically one or one-and-one-half stories in height, of simple design, and minimal decorative detail. Examples include the cottages along Lake Moxie (ID-8, ID-54, and ID-64).

The suburban residential developments that followed World War II included modern dwelling types, such as the cape, ranch, and raised ranch (McAlester and McAlester 1984:477). All these building types became increasingly popular in the 1960s and are still in use today (McAlester and McAlester 1984:477). The twentieth-century cape commonly includes a pair of dormer windows on the façade and Colonial Revival detailing at the entrance (e.g., ID-1479). The ranch is a one-story dwelling with a low-pitched roof and often includes a picture window and attached carport or connected garage (e.g., ID-951). With the automobile becoming prevalent

in American society after World War II, it was also common for garages to become a popular addition to residences, either as a separate structure (ID-364), connected to the home via a breezeway (ID-400), or incorporated into the design of the home (ID-953). Other examples of post-war residences, such as the raised ranch and split-level, were also observed during the field survey.

Agricultural Resources

Agriculture was the primary economic means for settlers in Maine in the late eighteenth and early nineteenth centuries, and buildings associated with agriculture were the most commonly observed within the Project survey area.

The most common agricultural resource type is the connected farmhouse. The farmhouse was a major architectural form in New England since the late eighteenth century. Highly functional, farmhouses developed through the building traditions of the Colonial period (Garvin 2001:96–97). These buildings often followed Georgian or Greek Revival architectural styles, or the buildings had no style at all with minimal ornamentation. Building materials varied, but in this area, these are primarily wood-frame construction with wood clapboarding. Farmhouses were typically grouped with barns, sheds, and other buildings and structures that supported the various agricultural activities of the farm. These buildings were connected, as is often the case in Maine, creating a “connected farm” that typically consisted of the living quarters, or “big house”; a smaller building or ell containing the kitchen area; the “back house” (traditionally a craft-shop or carriage house); and a barn (Hubka 1984:5–6).

Some connected farmhouses were noted in the discussion of residential resources. Additional representative examples from the nineteenth century include those on Packard Road in Greene (ID-600) and on Belanger Road in Jay (ID-846 and ID-847). Many of these altered buildings underwent other changes to their original appearance, including the application of vinyl siding, replacement windows, and additions that detract from the original features of the building. As a result of the decline in agriculture in the early twentieth century and with the advent of the automobile, barns and stables were often repurposed for vehicle storage.

During the twentieth century the agricultural economy has diminished in the Project area. Farmland was sold and subdivided to allow for commercial and residential developments. However, some large farms within the Project area are still operating into the twenty-first century, such as the Stukas Farm in Lewiston (ID-335 through ID-338), which features a vast orchard.

Industrial Resources

Many industrial sites within the Project survey area, such as the former paper mill in Bingham, are no longer in operation. Yet, a few examples of industrial architecture in the Project area survived. The Wyman Hydro Dam (ID-1286) was constructed on the upper Kennebec River in

Bingham in 1928 to power the mills located south along the lower Kennebec River (Maine Historical Society 2010). At the time of construction, the dam was the largest in the eastern United States and continues to operate today.

Religious Buildings

Religious buildings within the Project survey area reflect the varying religions present in the northeast and date from the early nineteenth to late twentieth centuries. These include the Methodist Church (ID-254) in North Pownal and the St. Denis Catholic Church (ID-1368–1369) in Whitefield. One of the earliest surviving examples of a religious building within the Project area is the Bingham Free Meeting House (ID-164, Photograph #52). Dating to 1835, the structure was completed in the Gothic Revival style with pointed arch windows on the side elevations and above the two entries on the façade. The square belfry features a bell-shaped cupola.

Cemeteries

Cemeteries dating from the late eighteenth and early nineteenth centuries were typically small family plots or town cemeteries surrounded by low stone walls or cut granite blocks. The Randall Road Cemetery in Lewiston (ID-386) contains marble markers and is enclosed by a simple wood fence along the road and stone walls along the wooded areas to the north, south, and west.

Cemeteries established in the late nineteenth century include the Franklin Road Cemetery (ID-825) and the Farmington Falls Cemetery (ID-928). Both cemeteries contain marble and granite gravestones, including a number of mid-sized obelisks. Gravel drives provide travel routes within the cemetery.

An example of an early twentieth-century cemetery is the Fairview Cemetery in Leeds (ID-672). The cemetery contains marble and granite markers and is enclosed by a chain-link fence separated by granite posts. The cemetery is on flat, open land and has minimal plantings and vegetation.

Recreational Resources

With the increase of summer tourism in the late nineteenth century through the present day in Maine, a number of buildings were constructed for seasonal residents. Lake Moxie Camp (ID-24) was established in the early twentieth century at Lake Moxie in The Forks Plantation. Seasonal residences within the Project area include modest cottages constructed near lakes or scenic vistas. These cottages are typically one-and-one-half stories in height with minimal decorative elements and often included first-stories porches.

Transportation Resources

Transportation resources or properties within the Project area include historic bridges, railroads, roadways, culverts, and service stations. Railroad-related resources in the Project area include rail beds and lines, depots, whistle posts, mile markers, bridges, and culverts. The Troutdale train depot in Forks Plantation (ID-57) and Baker's Station (ID-68 and ID-69) were part of the former Somerset branch of the Maine Central Railroad line, which brought outdoor enthusiasts to the Lake Moxie/Troutdale area in the early twentieth centuries. The buildings were since converted to residences and undergone alterations, such as additions and altered window openings on the former Troutdale Station. Overall, these former railroad stations retain most aspects of integrity.

2.6 NRHP-LISTED AND PREVIOUSLY DETERMINED NRHP-ELIGIBLE RESOURCES

The following summarizes the previously identified above ground historic resources within the indirect or direct APEs that were determined eligible for listing/are listed in the NRHP (i.e., historic properties) (Table 2-3). Representative samples of these resources are described in detail below.

NRHP Listed Resources

Table 2-3. NRHP-listed and eligible Previously Recorded Above Ground Resources by Town and County.

County	Town	NRHP Listed	NRHP Eligible
Androscoggin	Greene	0	3
Androscoggin	Leeds	0	6
Androscoggin	Lewiston	1	2
Androscoggin	Livermore Falls	0	7
Franklin	Farmington	0	7
Lincoln	Alna	1	0
Lincoln	Whitefield	2	0
Lincoln	Wiscasset	9	3
Somerset	Anson	8	0
Somerset	Bingham	1	70
Somerset	Concord Twp.	0	6
Somerset	Embden	1	0
Somerset	Moscow	0	4
Multi	Multi	1	0
Total		24¹	108²

¹ NRHP ID could not be located for 1 resource. Resources listed either individually or as part of a district.

² Count includes 1 duplicate resource and 2 resources previously determined not individually eligible but recommended eligible as part of a district.

No Longer Eligible Resources

Appendix Map Number 22

The barn (ID-886) at 341 Knowlton Corner Road in Farmington and was determined eligible for listing in the NRHP by the MHPC in February 2015 (MCHP #151-0186a). Based on this reconnaissance survey, SEARCH determined that the barn has been demolished and is therefore no longer eligible for NRHP listing. According to historic aerials the barn was removed circa 2012 (<https://www.historicaerials.com>).

Appendix Map Numbers 9-10j, and Map 11

The **Arnold Trail to Quebec (ID-1596)** follows the 312.2 km (194 mi) route taken by Benedict Arnold in 1775 along the waterways of Maine to lead an attack on the British in Quebec City, Canada. Listed in the NRHP in October 1969 (NRHP # 69000018) under Criteria A: Military History, Transportation and B: Person. The expedition route follows the Kennebec River north through Wyman and Flagstaff Lakes, along parts of the Dead River, and then the Chain Ponds into Canada. Although the waterways have been altered with dams, one can still largely follow the route today. The trail includes portions of the indirect APE in Moscow, Bingham, Concord Township, Embden, Anson, and Madison.

Appendix Map Number 9

The single-family residence **(ID-139)** at 18 Rollins Street in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP # 042-0070) under Criterion C Architecture. The single-family residence is a good example of typical 1930s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence **(ID-140)** at 15 Rollins Street in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP # 042-0071) under Criterion C Architecture. The single-family residence is a good example of typical 1930s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 29 Owens Street **(ID-160)** located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0063) under Criterion C Architecture. Constructed in a style of the late 19th/early 20th century revival tradition on an American Foursquare plan, the resource features a bay window and an enclosed porch. The resource is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its

association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

Appendix Map Numbers 9 and 10b

The single-family residence (**ID-126**) and barn (**ID-127**) at connected farmhouse, 300 Main Street/Route 201 located in Bingham were evaluated as NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0082 and #042-0082a) under Criterion C Architecture. The connected farmhouse with Italianate modifications is a good example of how an 1860s residence was upgraded over time. It contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

Appendix Map Number 10a

The single-family residence (**ID-112**) at 31 Baker Street in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0156) under Criterion C Architecture. Located in the heart of Bingham, the single-family residence is a good example of typical 1830s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-113**) at 35 Baker Street in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0157) under Criterion C Architecture. The single-family residence is a good example of typical late 1800s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-114**) at 37 Baker Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0158) under Criterion C Architecture. The single-family residence is a good example of typical late 1800s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-115**) at 36 Baker Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0159) under Criterion C Architecture. The single-family residence is a good example of typical late 1800s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-116**) at 34 Baker Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0160) under Criterion C Architecture. Located in the heart of Bingham, the single-family residence is a good example of typical 1890s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-117**) at 17 River Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0122) under Criterion C Architecture. The single-family residence is a good example of typical late 1800s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-118**) at 19 River Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0121) under Criterion C Architecture. The single-family residence is a good example of typical 1880s Greek Revival architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-119**) at 21 River Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0120) under Criterion C Architecture. The single-family residence is a good example of typical 1930s Craftsman architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development

for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence **(ID-120)** at 27 River Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0119) under Criterion C Architecture. The single-family residence is a good example of typical 1880s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence **(ID-121)** at 28 River Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0118) under Criterion C Architecture. Located in the heart of Bingham, the single-family residence is a good example of typical 1880s Greek Revival residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence **(ID-122)** at 30 River Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0117) under Criterion C Architecture. Located in the heart of Bingham, the single-family residence is a good example of typical 1900s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence **(ID-123)** at 20 River Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0116) under Criterion C Architecture. The single-family residence and is a good example of typical 1880s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence **(ID-124)** at 18 River Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0115) under Criterion C Architecture. The single-family residence and is a good example of typical 1880s Italianate architecture and

contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence **(ID-125)** at 14 River Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0114) under Criterion C Architecture. The single-family residence is a good example of typical 1930s Craftsman architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

Appendix Map Number 10b

The single-family residence **(ID-128)** at 17 Dinsmore Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0081) under Criterion C Architecture. The single-family residence is a good example of typical 1890s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence **(ID-129)** at 23 Dinsmore Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0082) under Criterion C Architecture. The single-family residence is a good example of typical 1920s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence **(ID-130)** at 25 Dinsmore Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0079) under Criterion C Architecture. The single-family residence is a good example of typical 1920s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence **(ID-131)** at 20 Dinsmore Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0078) under Criterion C Architecture.

The single-family residence is a good example of typical 1920s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-132**) at 18 Dinsmore Street in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0077) under Criterion C Architecture. The single-family residence is a good example of typical 1890s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

Bingham Union Library (**ID-133**) at 297 Main Street/Route 201 in Bingham was evaluated as eligible NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0075) under Criterion C Architecture. The library is a good example of typical 1840s residential architecture and the repurposing of a building. It is contributing to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-135**) and barn (**ID-179**) at 291 Main Street/Route 201 in Bingham were evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0073 and #042-0073a) under Criterion C Architecture. The connected farmhouse with Italianate modifications is a good example of how a property was upgraded over time and is contributing to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-137**) at 289 Main Street/Route 201 in Bingham was evaluated as eligible for National Register listing by the MHPC in October 2013 (MHCP #042-0072) when it reviewed PAL Inc.'s January 2011 reconnaissance survey for the Bingham Wind project. The single-family residence is a good example of 1870s modest Greek Revival architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development

for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-138**) at 286 Main Street/Route 201 in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0076) under Criterion C Architecture. The single-family residence is a good example of typical 1870s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-141**) at 279 Main Street/Route 201 in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0071) under Criterion C Architecture. The single-family residence is a good example of typical 1870s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-143**) at 136 Lander Street in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0053) under Criterion C Architecture. The single-family residence is a good example of typical 1930s residential architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

Multi-family residence (**ID-144**), 114-116 Lander Street in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0052) under Criterion C Architecture. The duplex is a good example of a typical 1880s multi-family residence and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-145**) at 269 Main Street/Route 201 in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0056) under Criterion C Architecture. The single-family residence is a good example of typical 1880s residential

architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-146**) at 268 Main Street/Route 201 in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0050) under Criterion C Architecture. The single-family residence is a good example of typical 1880s Italianate architecture and contributes to the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The commercial/mixed use residence (**ID-147**) at 266 Main Street/Route 201 in Bingham was evaluated as eligible for NRHP listing by the MHPC on 10/23/2013 (MHCP #042-0049) under Criterion C Architecture. The residence is typical of 1890s architecture. The conversion to a commercial residence maintains the overall character and feeling of a nineteenth to early twentieth-century industrial village. In addition, SEARCH recommends the resource as contributing to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The barn at 268 Main Street (**ID-173**) is located in Bingham and was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0050a) under Criterion C Architecture. Constructed in the vernacular tradition, the resource is a typical example of mid-to-late-nineteenth century agricultural construction representative of the New England connected house and barn complex that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The structure is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-178**) and barn (**ID-142**) at 277 Main Street in Bingham were determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0055 and #042-0155a) under Criterion C Architecture. Constructed in the vernacular tradition, the connected farmhouse features Cape Cod style detailing and is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century

New England village. The structures are also recommended eligible for listing in the NRHP as contributing resources to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-180**) and barn (**ID-134**) at 295 Main Street in Bingham were determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0074 and #042-0074a) under Criterion C Architecture. Constructed in the vernacular tradition, the connected farmhouse features late-nineteenth/early-twentieth revival style detailing and is a typical example of late-nineteenth century residential construction that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

Appendix Map Number 10d

The single-family residence at 252 Main Street (**ID-152**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0045) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features Greek Revival style detailing and is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 261 Main Street (**ID-153**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0057) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features some Victorian style detailing including broad eave overhangs and a bay window on the front façade. The resource is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 259 Main Street (**ID-154**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP

#042-0058) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features some Victorian style detailing including broad eave overhangs and a bay window on the front façade. The resource is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 6 Owens Street (**ID-155**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0059) under Criterion C Architecture. Constructed in the vernacular tradition, the resource is three bays wide and features centrally placed chimney as well as cedar shingle siding. The resource is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The barn at 10 Owens Street (**ID-156**) is located in Bingham and associated with the single-family residence (**ID-157**) on the same property. The resource (**ID-156**) was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0060a) under Criterion C Architecture. Constructed in the vernacular tradition, the resource is a typical example of late-nineteenth century agricultural construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The structure is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 10 Owens Street (**ID-157**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0060) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features some Victorian style detailing including a centrally placed chimney and a broken pediment. The resource is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its

association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 16 Owens Street (**ID-158**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0061) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features some Greek Revival style detailing, including a broken pediment and is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 20 Owens Street (**ID-159**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0062) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features some Victorian style detailing including broad eave overhangs, a broken pediment, and a bay window on the front façade. The resource is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 251 Main Street (**ID-161**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0044) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features and exterior end chimney and a stylized entryway. The resource is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 249 Main Street (**ID-162**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0043) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features some Victorian style detailing including broad eave overhangs, a broken

pediment, and is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-174**) and barn (**ID-149**) at 262 Main Street in Bingham were determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0048 and #042-0048a) under Criterion C Architecture. Constructed in the vernacular tradition, the connected farmhouse features some Victorian style detailing including broad eave overhangs and is a typical example of late-nineteenth century residential construction that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-175**) and barn (**ID-150**) at 258 Main Street in Bingham were determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0047 and #042-0047a) under Criterion C Architecture. Constructed in the vernacular tradition, the connected farmhouse features late-nineteenth/early-twentieth revival style detailing and is a typical example of late-nineteenth century residential construction that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence (**ID-176**) and barn (**ID-151**) at 256 Main Street in Bingham were determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0046 and #042-0046a) under Criterion C Architecture. Constructed in the vernacular tradition, the connected farmhouse features late-nineteenth/early-twentieth revival style detailing and is a typical example of late-nineteenth century residential construction that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

Appendix Map Number 10e

The barn at 244 Main Street (**ID-163**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0042a) under Criterion C Architecture. Constructed in the vernacular tradition and is a typical example of late-nineteenth century agricultural construction of that of a connected house-barn complex. The resource is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The structure is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The **Bingham Free Meeting House** (**ID-164**), on Old Church Road at the intersection with Main Street/Route 201 in Bingham, was listed in the NRHP in 1976 (NRHP #76000113) under Criteria A for Religion and C for Architecture. Located in the heart of Bingham, the church built in 1835, is an example of the transition between Federal and Gothic Revival architecture, and contributes to the overall character and feeling of a nineteenth- to early twentieth-century industrial village NRHP and is also recommended as a contributing resource to the Bingham Village Historic District.

The single-family residence at 9 Old Church Road (**ID-165**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0041) under Criterion C Architecture. Constructed in the vernacular tradition with a broken pediment and centrally located chimneys, the resource is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The barn at 9 Old Church Road (**ID-166**) is located in Bingham and associated with the single-family residence (**ID-165**) on the same property. The resource (**ID-166**) was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0041a) under Criterion C Architecture. Constructed in the vernacular tradition and is a typical example of late-nineteenth century agricultural construction of that of a connected house-barn complex. The resource is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 16 Old Church Road (**ID-167**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0018) under Criterion C Architecture. Constructed in the vernacular tradition with some Colonial Revival style detailing on an American Foursquare plan, the resource features a bay window and an enclosed porch. The dwelling is a typical example of late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 227 River Road (**ID-168**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0008) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features Greek Revival detailing and is a typical example of mid-nineteenth century residential construction that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The barn at 227 River Road (**ID-169**) is located in Bingham and associated with the single-family residence (ID-168) on the same property. The resource was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0008a) under Criterion C Architecture. Constructed in the vernacular tradition, the resource is a typical example of mid-nineteenth century agricultural construction that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The structure is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 223 Main Street (**ID-170**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0203) under Criterion C Architecture. Constructed in the vernacular tradition, the resource is a typical example of early-twentieth century residential construction that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the

Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The barn at 219 Main Street (**ID-171**) is located in Bingham and associated with the single-family residence (**ID-172**) on the same property. The resource was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0202a) under Criterion C Architecture. Constructed in the vernacular tradition, the resource is a typical example of mid-nineteenth century agricultural construction that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The structure is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 219 Main Street (**ID-172**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0008) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features late-nineteenth/early-twentieth revival style detailing and is a typical example of late-nineteenth century residential construction that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

The single-family residence at 244 Main Street (**ID-177**) located in Bingham was determined eligible for listing in the National Register of Historic Places by the MHPC on 10/23/2013 (MCHP #042-0042) under Criterion C Architecture. Constructed in the vernacular tradition, the resource features some Victorian style detailing including broad eave overhangs and a bay window on the front façade. The resource is a typical example of late-nineteenth century residential construction that contributes to the setting, feeling, and association of a late-nineteenth/early-twentieth century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

Appendix Map Number 10g

The single-family residence (**ID-228**) at 172 Main Street/Route 201 in Bingham was determined eligible for listing in the NRHP by the MHPC in October 2013 (MCHP #042-0016). Constructed in the vernacular tradition, the resource features Italianate style detailing and is a typical example of mid-to-late-nineteenth century residential construction that contributes to the setting,

feeling, and association of a late-nineteenth/early-twentieth New England village. The resource is located within the proposed Village of Bingham Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The resource is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

Appendix Map Number 11

Concord Haven (ID-1259), on the east side of Route 16, north of Berry Road in the Town of Emden, was listed in the NRHP in October 1992 (NRHP # 92001297) under Criteria A: Health/Medicine; B: Person; and C: Architecture. Constructed in the late nineteenth- to early twentieth-century Colonial Revival style, the residence is locally significant under Criterion B in the areas of Health and Medicine for its association with Dr. J. Leon Williams, a dentist and pioneer in the medical field. The structure is also significant under Criterion C for architecture as the only architect-designed structure in the town of Emden.

Appendix Map Number 40b

The **Clough Meeting House (ID-356)** at 32 South Lisbon Road in Lewiston was listed on the NRHP in June 2013 (NRHP #13000438) under Criterion C: Architecture. Built by the Freewill Baptist Church in 1846, it is the oldest church building in Lewiston. Constructed in the vernacular tradition with modest Greek Revival details, the building is a typical example of the meeting house style church found in New England.

Appendix Map Number 55e

A **farmstead (ID-1547)** located at 495 Birch Point Road in Wiscasset, was listed on the NRHP in 2011 (NRHP number not found) under Criteria A: Agriculture/farming, Settlement; and C: Architecture. The farmstead was first established ca. 1795 and consists of a single-family residence (connected farm), detached mixed-use barn, dairy barn, and poultry barn. The residence dates to the 1830s, although the barns are mid-nineteenth century. Constructed in the vernacular tradition, the farmstead and its resources, including the agricultural fields, are typical of mid- to late nineteenth-century agricultural construction that contributes to the setting, feeling, and association of nineteenth- to early twentieth-century New England agricultural development.

Previously Determined NRHP Eligible Resources

Appendix Map Number 7

Over-The-Horizon Backscatter Radar Transmission Site (ID-71), located in Moscow at the northern terminus of Stream Road, was recommended eligible for National Register listing by the US Air Force in 2007 under Criteria A: Military history; and C: Engineering. In October 2013, MHPC concurred with this determination (MHPC #293-0062) when it reviewed PAL Inc's Bingham Wind Survey, dated November 2011. The property is not publicly accessible. It does retain integrity of setting, as the surrounding area remains undeveloped. The property is eligible under Criterion A for its association with US military history in the United States during the Cold War.

Appendix Map Number 9

The Wyman Hydro Project /Wyman Station, Wyman Hydroelectric Station (ID-1286), part of the Wyman Hydro project at the west end of Station Road in the town of Moscow, was determined eligible for listing in the NRHP by the MHPC in December 2010 (MCHP #293-0001) under Criteria A: Community Planning/Development and C: Engineering/Architecture. The concrete dam and powerhouse, which comprise the hydroelectric station, were constructed by Central Maine Power Company along the Kennebec River. The resource is significant for its role in early twentieth-century industry and engineering.

Wyman Dam (ID-1287), part of the Wyman Hydro project and the Wyman Hydroelectric Station (ID-1286), located at the west end of Station Road in the town of Moscow, was determined eligible for listing in the NRHP by the MHPC in April 2011 (MCHP #293-0045) under Criteria A: Community Planning/Development and C: Engineering/Architecture. The concrete dam was constructed by Central Maine Power Company along the Kennebec River at the south end of what is now Wyman Lake. The resource is significant for its role in early twentieth-century industry and engineering.

Appendix Map Number 10

The Garfield School (ID-1269) at Kennebec River Road and Jackson Pond, located in Concord Township, was determined eligible for listing in the NRHP by the MHPC in October 2013 (MCHP #534-007) under Criteria A: Education and C: Architecture. Constructed in the vernacular tradition, the resource is a typical example of mid-nineteenth-century schoolhouse construction. Several materials, including the roof and windows, were replaced, altering the resource, but generally, the resource retains the setting, feeling, and association of late nineteenth- to early twentieth-century New England rural educational development.

Appendix Map Number 10e

The single-family residence at 226 Main Street (ID-1546), located in Bingham, was determined eligible for listing in the NRHP by the MHPC in October 2013 (MCHP #042-0201) under Criterion C: Architecture. Constructed in the vernacular tradition, the resource features Greek Revival detailing and is a typical example of mid-nineteenth-century residential construction that contributes to the setting, feeling, and association of a late nineteenth- to early twentieth-century New England village. The resource is also recommended eligible for listing in the NRHP as a contributing resource to the Bingham Village Historic District under Criterion A in the area of community planning and development for its association with the early development of the Village of Bingham. The dwelling is in fair condition and retains integrity of workmanship, setting, location, feeling, and association.

Appendix Map Number 10f

The farmstead (ID-1544), located at 259 Kennebec River Road Main Street in Concord Township, was determined eligible for listing in the NRHP by the MHPC in October 2013 (MCHP #534-0012hfs) under Criteria A: Agriculture/Farming and C: Architecture. The farmstead is composed of a single-family residence (**ID-1279**, MHPC #534-0012), an ell structure (**ID-1280**,

MHPC #534-0013), and a connected barn (**ID-1281**, MHPC #534-0012a). Constructed in the vernacular tradition, the resource features Italianate style detailing and, along with its agricultural fields, is a typical example of late nineteenth-century residential construction that contributes to the setting, feeling, and association of a late nineteenth- to early twentieth-century New England connected house and barn complex.

Appendix Map Number 20a

The Henry Hardy Farm (ID-1517) at 360 Weeks Mills Road, located in Farmington, is part of the Henry Hardy Farm and was determined eligible for listing in the NRHP by the MHPC in April 2015 (MCHP #154-0192hfs and #s 154-0192-0192d, 154-0193) under Criteria A: Agriculture/Farming; B: Person; and C: Architecture. The farm includes a residence (**ID-979**), four barns (**IDs 980-983**) and a garage (**ID-984**). All of the structures were constructed in the vernacular tradition, and are typical examples of late nineteenth-century house and barn construction that contribute to the setting, feeling, and association of late nineteenth- to early twentieth-century New England agricultural development.

Appendix Map Number 26c

The barn at 40 Turmel Road (ID-795) is in Livermore Falls and was determined eligible for listing in the NRHP by the MHPC in November 2009 (MCHP #249-0033a) under Criteria A: Agriculture/Farming; and C: Architecture. Constructed in the vernacular tradition, the New England-style dairy barn is a typical example of mid- to late nineteenth-century agricultural construction that contributes to the setting, feeling, and association of mid- to late nineteenth-century New England agricultural development.

Appendix Map Number 27

Pleasant Hill Cemetery (ID-779), located at Twelve Corners Road and Pomeroy Hill Road in Livermore Falls, was determined eligible for listing in the NRHP by the MHPC in June 2009 (MCHP #249-0032) under Criteria A: Settlement, Development; and C: Architecture. Featuring vernacular style headstones and monuments constructed of stone and concrete, Pleasant Hill Cemetery is an early example of a late nineteenth- to early twentieth-century New England cemetery.

Treat Cemetery (ID-781), located along Fayette Road in Livermore Falls, was determined eligible for listing in the NRHP by the MHPC in September 2003 (MCHP #249-0025) under Criteria A: Settlement, Development; and C: Architecture, Design. Featuring Greek Revival-style headstones and monuments constructed of stone and concrete with a circular layout in the northern portion, Treat Cemetery is an example of a late nineteenth- to early twentieth-century New England cemetery.

Appendix Map Number 29

Maine Central Railroad (ID-715) crosses the Project area at multiple locations. A segment of the railroad in Livermore Falls was previously determined eligible for NRHP listing by the MHPC in May 2004 (MHPC ID #249-0045) under Criterion C: Transportation. The railroad is significant

for its association with transportation, and many portions of the railroad retain integrity of design, materials, workmanship, setting, feeling association, and location.

New Norland Grange Hall #580 (ID-716) is at the intersection of River Road and Androscoggin Bluff Road in Livermore Falls. It was previously determined NRHP-eligible by the MHPC in May 2014 (MHPC ID #249-0044) Criteria A: Social History; and C: Architecture. The vernacular building is a typical example of a mid-nineteenth-century grange hall and retains all aspects of integrity.

Bowman Airfield (ID-719), located along River Road in Livermore Falls, was determined eligible for listing in the NRHP by the MHPC in June 2009 (MCHP #249-0031) under Criterion A: Transportation. The airfield consists of a one-story hangar constructed in the vernacular tradition. The hangar was constructed in the 1960s and was moved from the northern end of the runway following the constructed of additional modern hangars in the 1990s. The resource is a typical example of mid-twentieth-century rural airstrip and complex that retains its rural setting.

Appendix Map Number 33

Additon Farm (ID-629) located at 6 Additon Farm Road in Leeds was determined eligible for listing in the NRHP by the MHPC in August 2010 (MHPC ID #234-0013 through 234-0013d) under Criteria A: Agriculture/Farming and C: Architecture. The farmstead includes a connected residence (**ID-631**), dairy barn (**ID-627**), silo (**ID-628**), and two hay barns (**ID-630 and ID-632**). The farmstead is an excellent example of late nineteenth- to early twentieth-century architectural styles, including Italianate, Queen Anne, and vernacular. The property retains its associated farmland and landscape features such as fencing and stone walls. Additon Farm retains integrity of design, materials, workmanship, setting, feeling, location, and association.

Appendix Map Number 35a

Valley Cemetery (ID-580) on Route 202 in Greene was previously determined eligible for listing in the NRHP by the MHPC in May 2013 (MHPC ID #180-0017) under Criterion A: Early Settlement and Development. It is a typical example of a rural cemetery from the early to mid-nineteenth century. It features a receiving tomb and wrought-iron fence, as well as over 100 gravestones. The cemetery retains integrity of setting, feeling, association, design, materials, workmanship, and location.

Appendix Map Number 35b

The **farmhouse (ID-564)** and **barn (ID-565)** located at 297 Route 202 in Greene were determined eligible for listing in the NRHP by the MHPC in November 2014 (MHPC ID #180-0029 and 180-0029a) under Criteria A: Agriculture/Farming; and C: Architecture. The farmhouse and connected barn are typical examples of vernacular architecture of the area from the mid-nineteenth century. Both the house and the barn have vinyl siding and replacement windows. The former farmstead no longer retains its associated pastureland due to developments on Route 202. These alterations have resulted in a loss of integrity of design, materials, setting, feeling, and association.

Appendix Map Number 36

Located at 1101 Main Street in Lewiston, **Jackson's Pine Cone Cabins/Maine Motel (ID-520)** was determined eligible for listing in the NRHP by the MHPC in July 2014 (MHPC ID #236-1291) under Criteria A: Tourism in the 20th century; and C: Architecture. The cabins were constructed in the 1920s as a result of the increase in seasonal tourism brought to the area by the popularity of the automobile. Some of the vernacular cabins have undergone alterations, and the main office building has vinyl replacement windows, vinyl siding, and additions. The surrounding setting was also altered with modern developments.

Appendix Map Number 39

The single-family **residence (ID-387)** at 374 Randall Road in Lewiston was determined eligible for listing in the NRHP by the MHPC in March 2015 (MHPC #236-1298) under Criterion C: Architecture. The brick vernacular building was constructed ca. 1860–1870 and features minimal Italianate detailing, such as rounded window hoods in raised brick on the first story of the façade. Brick buildings were minimally observed within the Project survey area. The building has a replaced raised seam metal roof and an aluminum-and-glass security door on the façade. Despite these alterations, the building retains integrity of setting, feeling, association, design, workmanship, and materials.

Appendix Map Number 53

Leslie Farm (ID-1449), located at 48 Dickinson Road in Wiscasset, was determined eligible for listing in the NRHP by the MHPC in February 2016 (Inventory #491-0408hfs) under Criterion C: Architecture. The farmstead is composed of a single-family residence (**ID-1447**, MCHP #491-0408) with additions, a detached barn (**ID-1448**, MCHP #491-0408a), and several smaller outbuildings. Constructed in the vernacular tradition during the 1850s to 1920s, the farmstead and its resources, including the agricultural fields, have the feeling of a gentleman's farm and contribute to the setting, feeling, and association of late nineteenth- to early twentieth-century New England agricultural development.

2.7 NATIONAL REGISTER ELIGIBILITY

The individual resources and historic districts identified within the survey area and their NRHP status are presented on topographic and aerial maps in **Appendix A**. These data are presented in tabular form as part of the Survey Matrix (**Appendix B**). The NRHP evaluation discussion is organized by Resources Recommended NRHP Not Eligible (**Section 2.8**) and Resources Recommend NRHP Eligible (**Section 2.9**). Each of the two NRHP evaluation sections is further organized by Appendix Map Number, as requested by MHPC.

As a result of the reconnaissance survey, SEARCH has gathered sufficient data to offer NRHP recommendations for 1,101 newly identified resources. These resources are recommended

eligible (240) or not eligible (861) for NRHP listing. Resources recommended NRHP Not Eligible are addressed in **Section 2.8**. The NRHP status for these resources is identified in the Survey Matrix (**Appendix B**), and each resource recommended NRHP eligible is further described below in **Section 2.9**.

Resources Recommended NRHP Not Eligible

These resources were initially identified as potentially eligible in a preliminary report SEARCH submitted to MHPC in August 2018. Further evaluation and research concluded that 21 of these resources are not NRHP eligible. As this report (October 2018) replaces the August 2018 report, the resources that were previously recommended as potentially eligible are discussed below to justify the change in NRHP recommendation.

Appendix Map Number 2

Lake Moxie Inn (ID-14), located at 1103 Lake Moxie Road, The Forks Plantation. is a two-story, hipped roof, 4-bay wide former hotel constructed circa 1915. SEARCH previously recommended the hotel as individually eligible under Criterion A for its associations with Community Development and Recreation; and C: Architecture in the Reconnaissance Report (SEARCH, August 2018). However, upon further evaluation, the building does not appear to have strong or unique ties to the recreational development of the area and the Four-Square influenced building style, although rare in The Forks Plantation, does not retain sufficient integrity for individual listing. Therefore, SEARCH does not recommend this resource as individually eligible for NRHP listing. (See Section 2.2 for recommendation as part of district.)

Appendix Map Number 6

The bridge (**ID-70**) located on Troutdale Road in Bald Mountain Twp. T2 R3 was previously recommended eligible as a contributing resource to the Lake Moxie/Troutdale/Bakers Station Historic District. However, the bridge is located too far south of Bakers Station to be included within the proposed district boundaries; therefore, it is recommended not eligible for NRHP due to lack of significance.

Appendix Map Number 15

Shady Maple Deer Farm (ID-1008 and ID-1009), located at 892 Mayhew Road in Starks is recommended not eligible for inclusion in the NRHP. The property includes a residence and two barns on 133 acres, and the entire complex is estimated to date to the mid-twentieth century. Comparisons of aerial images dating back to 1953 show that the building footprints have changed over time. It is not clear if older buildings were replaced or added onto, but the current footprints do not appear to be historic. Research on the Shady Maple Deer farm did not find associations with significant events or persons, and there is no evidence to suggest the property is significant under either Criterion A or B. Further, the buildings are not significant architectural styles or types, and are not significant under Criterion C. Due to an overall lack of significance, the Shady Maple Deer Farm is recommended not eligible for inclusion in the NRHP.

Appendix Map Number 19

The Fred Hardy Farm (ID-1519), located at 879 Weeks Mills Road in New Sharon, is recommended not eligible for inclusion in the NRHP. Positioned on the north side of Weeks Mills Road, the farmstead contains three buildings of historic age. A residential building (**ID-986**) constructed in a vernacular tradition with Greek revival detailing is located at the southern end of the property, and two dairy barns are located to the north (**ID-988**) and northwest (**ID-987**) of the residence. Three additional non-historic structures located to the north complete the farmstead. The house is estimated to have been constructed in the early to mid-nineteenth century and purchased by the Hardy family in 1960. According to Fred Hardy's obituary, he worked at the Farmington Shoe Company from 1960-1977 and during that time established a herd of Holsteins on his farmland. He was able to begin farming full-time in 1977. The transition to full-time agricultural operation included construction of three non-historic buildings. Given the later conversion to commercial agriculture and modern building additions, the current layout of the property does not represent the layout of a historic agricultural property and is not NRHP significant for its association with agriculture under Criterion A. Fred Hardy was well known in the area, but is not known to be influential under NRHP Criterion B. Several material alterations to the barns and residential structure include replacement roofing and windows. Additionally, the barns and house are not architecturally significant examples of their styles and types, thus the property is not significant under Criterion C. Due to an overall lack of significance, the **Fred Hardy Farm (ID-1519)** is recommended not eligible for inclusion in the NRHP.

Appendix Map Number 23

The **farmstead at 236 Chesterville Road (ID-1566)** in Franklin County includes a residence (**ID-865**) and semi-detached barn (**ID-866**), and a detached barn (**ID-867**) along with several other circa 2000s barns. The circa 1880-1920 property is currently operated as an equestrian center and stables called Centerpeace Farm. The residence (ID-865) is a Cape Cod form with a side gable roof, two interior chimneys (one central and one on south end). The residence is clad in weatherboard and the roof is clad in standing seam metal. The central primary entrance on the east facing primary façade has a single-leaf door with sidelights and a transom with a surround of stylized pilasters and architrave, the only stylistic detail on the exterior. On the north end is a one-story, side ell with a side gable roof. Windows throughout the main block and side ell appear to be replacement vinyl windows. The northwest corner of the side ell is adjacent to a hay barn (**ID-866**). The two-story barn has a rectangular plan and a steeply pitched front gable roof. The barn appears to have minimal fenestration and is clad in vinyl siding. The south facing façade has double-doors with a transom light above and a shed roof equipment addition. A second barn (**ID-867**) is located west of the residence and is three stories with a low-pitched front gable roof. On the barn's east primary façade is a double-door ground-level entrance, a third-story hay door, and paired 4 light windows on each story. A shed roof vehicle shelter addition is on the south façade. The rear façade has a one-story addition, which replaced a demolished three-story section of the barn that appears in 1963 aerial photographs (Vintage Aerial 2018a, 2018b). The date of the demolition and addition is unknown. The integrity of design, feeling, setting, and association has been adversely impacted by the construction of

additional barns and stables within the last twenty years. The replacement of windows in the main residence and the replacement vinyl siding on the hay barn have impacted the property's integrity of materials and workmanship. The property's integrity of location remains high. Overall, the property does not retain sufficient integrity to convey its significance as a late nineteenth/early twentieth century farmstead and is therefore recommended not eligible for NRHP listing.

Appendix Map Number 25

The **Seamon's Orchard property (ID-838)** at 509 Franklin Road/Route 133 includes a farmhouse and roadside barn on the east side of Franklin Road. The farmhouse was constructed between 1861 and 1880 and the roadside barn was constructed between 1980 and 1990. Leon and Dawn Seamon planted the orchard in 1980 and ran it as a commercial operation into the early 2000s (Daily Bulldog 2017). Aerial photographs show a large barn that was demolished between 2009 and 2011. The farmhouse is a vernacular interpretation of the Gothic Revival style. The original portion is a two-story, rectangular block with a side gable roof with paired full-height wall gables. Two bay windows flank the primary entrance. A one-story addition with a hipped roof is on the east façade with a large, two-story addition behind in an L-plan. These additions were constructed prior to 1965 and tripled the size of the residence. Vinyl windows are found throughout the original block and the additions. Although the original block retains the paired gables and bay windows, hallmarks of the Gothic Revival style, the replacement windows and expansive additions have significantly impacted the building's historic integrity of design, materials, workmanship, and feeling. Overall, the property does not retain sufficient integrity to convey its significance as a mid-to-late-nineteenth century vernacular representation of the Gothic Revival style and is therefore recommended not eligible for NRHP listing.

Appendix Map Number 26

The house at **104 Franklin Road (ID- 812)** was constructed circa 1960 and is a transitional Ranch style residence with Minimal Traditional aspects. The main block has a side gable roof with wood shake siding and a bay window with ashlar block veneer. Aerial photographs from 1963 to 1965 show only the footprint of this main block. Sometime between 1965 and 1998, a one-room addition was made on the south side and a two-bay garage added south of the addition. The property is significant at the local level as an example of an early Ranch dwelling. There are several Ranch dwellings along this segment of Franklin Road leading north out of Livermore Falls. While it retains high integrity of location, setting, materials, and workmanship, the addition and added garage has impacted its integrity of feeling, association, and design. Overall, the property does not retain sufficient integrity to convey its significance as an early Ranch Style house and is recommended not eligible for NRHP listing.

Appendix Map Number 30

Norris Bridge (**ID-706**), also known as Bridge #5865, is located on Strickland Loop Road in Livermore Falls and crosses Scott Brook, a tributary of the Androscoggin River, which is approximately 650 feet to the west. This concrete slab bridge was constructed in 1961 and is considered a minor span on a town roadway. It is owned and maintained by the town of Livermore Falls. The road width on the bridge is 17', while the length of the bridge is 19'

(MaineDOT 2018). Modern metal guard rails have been placed on either side of the roadway. The bridge abutments appear to be comprised of rectangular slabs of granite, with riprap flanking the north and south abutments to prevent soil erosion. Norris Bridge retains its integrity of location, design, setting, materials, workmanship, feeling, and association; however, it lacks historical significance and is not of exceptional design. Therefore, Norris Bridge is recommended not eligible for NRHP listing.

Appendix Map Number 33

The residence and barn at **31 Anson Road (ID-609 and ID-610)** are both recommended not eligible for NRHP listing. Constructed in the vernacular tradition, the residence (**ID-609**) is a one-and-a-half story cape-shaped plan with a rear addition set on a concrete block foundation. The structure is five bays wide and is clad with clapboard siding. The side-gable roof is clad with asphalt shingles and features an exterior end chimney attached to the southwest corner. Constructed in the mid-twentieth century, the wood-framed barn (**ID-610**) is clad in vertical wood and features a gambrel roof with replacement metal siding. The barn sits to the rear of resource **ID-609**. Further intensive survey determined that the structure represents a highly prevalent approach to agricultural construction in Maine, as well as the northeast in general. Based on additional historical background research and the historic context of the area, the property is not significant under NRHP Criterion A because it is not associated with any significant period, event, or theme. Furthermore, research did not reveal any associations with any person(s) significant in history to qualify the property under Criterion B. Also, the resource is not eligible under Criterion C due to its lack of architectural distinction. Finally, the resource is not eligible under Criterion D because it lacks the potential to yield further information of historical importance. Therefore, the residence and barn at 31 Anson Road (**ID-609 and ID-610**) are recommended not eligible for NRHP listing due to a lack of significance.

Additon Cemetery (**ID-634**) is a newly recorded historic cemetery in Leeds on the southeast corner of Anson Road and Church Hill Road. Located within a rectangular-shaped parcel that fronts Anson Road, access to the cemetery is unrestricted and the eastern and northern extents are bound by tree lines. An unpaved roadway marks the principal entry to the cemetery along Anson Road. The Additon Cemetery does not appear to have a distinct design and landscaping is sparse. There are several trees within the bounds of the cemetery and only a few shrubs and small bushes are present.

The graves are primarily organized in rows oriented in an east-west fashion, typical of traditional Christian burial, with marble or granite headstones, and ledger stones, marking the locations of the graves. There are approximately 300 burials present. Most of the burials appear to be grouped by family as evidenced by surnames on stones in close proximity to one another. The cemetery appears to have developed originally as a family cemetery for the Additon family with some infant graves dating to the nineteenth century and burials continuing through the later part of the twentieth century. The majority of the markers are in fair to good condition, but some of the headstones appeared broken or damaged. Most of the markers are legible; however, some of the early markers have become illegible due to weathering and inherent failures in the stone material. All of the burials lie to the east and 0.41 miles outside of

the direct APE and 0.09 miles to the west of the indirect APE easternmost boundary. The cemetery appears to be maintained and there is no evidence of unmarked graves. No additional information could be found on the development or significance of the cemetery.

To be eligible for the NRHP, a cemetery or burial place must be shown to be significant under one or more of the four basic Criteria for Evaluation (Criteria A, B, C, and D). Additionally, cemeteries and graves must meet certain special conditions, including Criteria Consideration D: "A cemetery is eligible if it derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events" (Potter and Boland 1992:14). The Additon Cemetery (**ID-634**) is a newly recorded resource and based on the available information and field research, the Additon Cemetery does not appear to meet the minimum criteria for listing in the NRHP. The Additon Cemetery is not considered significant under Criterion A because it is not indicative of a particular era and is not associated with any significant period or theme. Furthermore, the cemetery is not eligible under Criterion B because it lacks association with any person(s) significant in history, and it is not eligible under Criterion C because of its lack of funerary monuments and their associated artworks, buildings, and landscapes associated with burial places that are good representatives of their stylistic type or period and methods of construction or fabrication. Finally, the cemetery is not significant under Criterion D because it lacks the potential to yield further information about cultural and ethnic groups. Since the cemetery is not eligible under any of the four criteria, and it does not derive its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events, it is the opinion of SEARCH that the Additon Cemetery (**ID-634**) does not meet the minimum criteria for listing in the NRHP, either individually or as a contributing resource within a potential or existing historic district.

Appendix Map Number 36

The house at **1145 Main Street (ID-1552/MHPC #236-0921)** is recommended not eligible for inclusion in the NRHP. The property includes a 1 ½ - story vernacular residential building and an associated garage. The primary building has a rectangular footprint, is three-bays wide, and has a clipped front-gable roof. The building does not feature character-defining features of any identified styles or types. Additionally, the building's integrity of design, materials and workmanship have been compromised due to window replacements and the addition of synthetic siding. Research did not reveal significance under Criterion A or B, and it does not display architectural significance under Criterion C. Due to an overall lack of significance, the house at **1145 Main Street (ID-1552/MHPC #236-0921)** is recommended not eligible for inclusion in the NRHP.

Appendix Map Number 45

Maxcys Bridge #5543 (ID-1333) is on Maxcy's Mill Road over the West Branch of the Sheepscot River, in Windsor. SEARCH previously recommended this bridge as potentially eligible under Criterion A for its association with Transportation in the Reconnaissance Report (SEARCH, August 2018). However, upon further evaluation, the bridge does not appear to be a unique or exemplary example of bridge construction. This slab style bridge, built in 1953, has a single 22-

foot long concrete slab with concrete abutments and wingwalls. The deck carries an asphalt paved road between concrete curbs with concrete guardrails. It is very typical of mid-twentieth century bridge design and construction; **Maxcys Bridge #5543 (ID-1333)** is recommended not eligible for NRHP listing.

Appendix Map Number 51

Averill Bridge #3145 (ID-1431) is located in Alna, Lincoln County, on West Alna road over Trout Brook. The MaineDOT Historic Bridge Survey identified this bridge as a rigid frame bridge, constructed 1934 and recommended it as not eligible for NRHP listing (MaineDOT, 2004). The bridge is a single span concrete bridge, with a steel guardrail and concrete abutments. SEARCH previously recommended this bridge as potentially eligible under Criterion A for its association with Transportation in the Reconnaissance Report (SEARCH, August 2018). However, upon further evaluation, the bridge does not appear to be a unique or exemplary example of this bridge type. It is not recommended eligible under Criterion B as it is not associated with any historic individual. It is not recommended under Criterion C because it lacks integrity of design, materials, and workmanship. Much of the original concrete substructure and steel guardrails have been replaced due to routine maintenance. In addition, it does not appear to be a unique example of a concrete bridge within the project area. Further, the bridge is not recommended under Criterion D because it is unlikely to yield additional information in the future. Finally, while Bridge #3145 is certainly associated with transportation, there are other bridges within the project area that are historically significant for their association with the history of automobile transportation in Maine. Bridge #3145 is a common bridge type without significant historical associations. Therefore, after further historical research and survey, SEARCH recommends this resource is not eligible for NRHP listing.

Resources Recommended NRHP Eligible

Appendix Map Number 1

Lost Camp (ID-1600) is located off of Lost Camp Road, Moxie Gore. This resource is recommended eligible for NRHP listing under Criteria A: Agriculture; and C: Architecture, with a proposed period of significance ca. 1950-1968 (the 50-year NRHP cutoff). The Lost Camp building is a log driver's cabin associated with log drives along the Kennebec River during the mid-to-late 20th century. The building was constructed between 1950 and 1970 of inexpensive, easily acquired materials. It stands as a rare still extant example of a typical log driver's cabin. It may also be associated with the last log drive on the Kennebec River in 1976. **Lost Camp (ID-1600)** retains a high degree of integrity with some minor loss of materials due to basic deterioration over time and minor loss of setting due to new tree growth around the cabin.

Appendix Map Numbers 2-6

The **Lake Moxie/Troutdale/Baker's Station Historic District (ID-1593)**, located on Lake Moxie and Troutdale Road in the Forks Plantation area of central Somerset County, is recommended eligible for NRHP listing under Criterion A for community planning and development and recreation. The historic district is comprised of **ID-14 through ID-64** and **ID-67 through ID-69** which includes the Lake Moxie Camp (**ID-24 through ID-31**), a former hotel (**ID-14**), the Baker

and Troutville Railroad stations (**ID-69, ID-57**), and several private camp residences. The northernmost boundary for the district begins near the Moxie Dam (**ID-18**). Traveling south along Lake Moxie Road, the district includes Lake Moxie Camp and the Baker's Station area at its southern boundary. The east and west boundaries are delineated by the property lines adjacent to the west side of Lake Moxie Road and the boundary of Lake Moxie to the east.

The Troutville area on the northern edge of the district includes the former Lake Moxie Inn **ID-14** (a two-and-one-half-story Victorian structure), several private residences, and the Moxie Dam. Further to the south, the area developed as the Lake Moxie Camp is representative of early twentieth-century traditional Maine sporting camps. Spurred on by the expansion of the numerous railroad lines, including Somerset Railroad, which expanded development northward into Maine and carried passengers north from Boston, sporting camps sprang up along the shores of many lakes and rivers. Beginning with construction in 1860, the Somerset Railroad included stops at the Baker and Troutville stations, which brought passengers to the Lake Moxie area (MacDougall 2000). However, while the rail line has since been removed and the stations have been converted into private residences, the area is still representative of early twentieth-century community development in rural Maine. The existing Troutdale Road follows the former route of the Somerset Railroad.

Camps, such as the one at Lake Moxie, provided recreational activities and drew upon popular Victorian ideals of pastoral imagery and an escape from industrialized society (Marx 1964). Sporting camps were popular with vacationers and those seeking relief from the summer heat. During their heyday in the early twentieth century, developers constructed nearly 300 summer camps; however, by the end of the twentieth century, only 74 camps remained (Arlen 2018). Several cabins that make up the Lake Moxie complex date to the 1920s, with additional cabins constructed in the 1960s. The cabins are situated on the east side of Troutdale Road, facing Lake Moxie. Community buildings, including a dining hall, kitchen, and store, are located along the northern edge of the property, with camper's cabins located to the southeast.

At the southern boundary of the district, the Baker's Station area includes a station by the Maine Central Railroad Company in 1917 and several late nineteenth to early twentieth century frame vernacular buildings (Maine Central Railroad 1917). The Baker's Station area to the south consists primarily of one-and-one-half story vernacular houses with Folk Victorian detailing in the eaves. The resources generally have stone foundations and gable roofs clad in asphalt shingles or metal roofing, and exterior fabrics are generally weatherboard. The buildings often feature interior brick chimneys and double-hung-sash windows. Minor material alterations to the structures within the district include replacement roofing and windows. However, the district generally retains integrity of setting, location, design, feeling, and association, and is an example of a local resource useful for interpreting the development of recreational society coupled with northward expansion in northern New England. Period of significance is 1904, when the Somerset Railroad was extended north from Bingham through 1933 when the railroad extension ceased operation. (Rails to Trails Conservancy website, viewed 08/15/2018: <https://www.trailink.com/trail-history/kennebec-valley-trail/>). It is still a very active recreational area today, known for fishing, hiking, and outdoor activities.

Lake Moxie Inn (ID-14), located at 1103 Lake Moxie Road, The Forks Plantation, is a two-story, hipped roof, 4-bay wide former hotel constructed circa 1915. SEARCH recommended the hotel as individually eligible under Criterion A for its associations with Community Development and Recreation; and C: Architecture in the Draft Reconnaissance Report (SEARCH, August 2018). However, upon further evaluation, the building does not appear to have strong or unique ties to the recreational development of the area and the Four-Square influenced building style, although rare in The Forks Plantation, does not retain sufficient integrity for individual listing. Therefore, SEARCH does not recommend this resource as individually eligible for NRHP listing. However, **Lake Moxie Inn (ID-14)** is a contributing resource to the recommended eligible Lake Moxie/Troutdale/Bakers Station Historic District under criteria A for its associations with the Early Development of the Lake Moxie area; and C for Architecture and is recommended eligible within the district, but does not warrant individual NRHP eligibility.

Appendix Map Number 2b

Lake Moxie Camp (ID-24 through ID-31), located on Troutdale Road in the Forks Plantation in central Somerset County, is recommended eligible for NRHP listing under Criterion A for community planning and development and recreation. The camp consists of a series of cabins or camps located along the northwestern shore of Lake Moxie. The Lake Moxie Camp is representative of early twentieth-century traditional Maine sporting camps. Sporting camps sprang up along the shores of many lakes and rivers, spurred on by the expansion of numerous railroad lines, including the Somerset Railroad. This line expanded development northward into Maine and carried passengers north from Boston. These camps provided recreational activities and drew upon popular ideals of pastoral imagery and an escape from industrialized society (Marx 1964). Sporting camps were popular with vacationers seeking relief from the summer heat. During their heyday in the early twentieth century, developers constructed nearly 300 summer camps; however, by the end of the twentieth century, only 74 camps remained (Arlen 2018).

Several cabins that make up the Lake Moxie Camp complex date to the 1920s, with additional cabins constructed in the 1960s. Log construction identifies many of the early cabins, while later additions are of wood-framed construction. The cabins are situated on the east side of Troutdale Road facing Lake Moxie. Community buildings, including a dining hall, kitchen, and store, are located along the northern edge of the property with camper's cabins located to the southeast. Located in a primarily rural and undeveloped setting and maintaining its historic rural viewshed, Lake Moxie Camp retains its historic recreational landscape, including access to Lake Moxie and retention of a majority of the original campers' cabins. Minor material alterations to the structures include replacement roofing and windows. However, the camp retains a high degree of architectural integrity and spatial arrangement, including its recreational setting. The property retains integrity of setting, location, design, feeling, and association, and is an example of a local resource useful for interpreting the development of recreational society coupled with northward expansion in northern New England. The period of

significance for Lake Moxie Camp is 1920 through 1969, the date of the earliest cabins through the 50-year age requirement for NRHP eligibility.

Appendix Map Number 4

Troutdale Station (Mosquito Station) (ID-57) on Troutdale Road, The Forks Plantation is recommended eligible for NRHP listing under Criteria A: Transportation and associations with the early development of the Lake Moxie/Troutdale/Baker Station Historic District and C: Architecture. This station was a stop on the Somerset Railroad (mile 62 just south of the midway point of Moxie Pond, which is approximately 5.5 miles long. The station is a single story, hipped roof, 4-bay wide, east facing house with wide overhanging eaves, clapboard siding, a shallow bay window, and 2/2 double hung windows. There is vertical board below the windows running around the whole base of the house, like an exterior wainscoting, with a matching vertical board frieze. Based on a historical photograph from circa 1950s, there was a second entry at the north end of the façade which has since been converted to a window (<http://www.nashuacitystation.org/resource/9304033350/>). Retains modest integrity, has been converted to a seasonal residence with new siding and altered an entry to a window. The former train station is a good example of a typical small station design, but with unique decorative details. The period of significance is 1910s-1933 when Somerset Railroad (MEC Railroad) had passenger service north of Bingham (MacDougall, The Old Somerset Railroad, 2000; p.7).

Appendix Map Number 6

Maine features 282 miles of the **Appalachian Trail (ID-66)**, a multi-state hiking trail that was established in the 1920s and 1930s. Benton MacKaye, a Connecticut conservationist, proposed the Appalachian Trail in 1921 as a recreational retreat for urbanites along the eastern Seaboard. The trail was to extend generally along the crest line of the Appalachian Mountains from Georgia to Maine. The Appalachian Trail Conference, known today as the Appalachian Trail Conservancy, formed in 1925 to fulfill MacKaye's vision. Through the work of numerous hiking clubs, state and agency partners, and the Civilian Conservation Corps, the Appalachian Trail was completed in August 1937. Through the 1940s, the Trail deteriorated due to hurricanes, road building, and the nation's intense focus on the war effort during World War II; however, the Trail reopened in 1951 ("Appalachian Trail" 2018; National Park Service 2008).

The portion of the Appalachian Trail through Maine is known as the most rugged and remote. Stretching from Baxter Peak in the north to the New Hampshire border on the south, the Maine section of the trail was the most challenging to open. During planning stages in the early 1930s, the Appalachian Trail Conference considered terminating the line at Mt. Washington in New Hampshire, but Myron Avery, a board member of the Conference and a Maine native, insisted the trail be continued into Maine. In 1935, the Maine Appalachian Trail Club formed to work on the trail, assisted by the Potomac Appalachian Trail Club which traveled to Maine from Washington DC. The CCC completed the last stretch of the trail in Maine—the high ridge between Spaulding and Sugarloaf Mountains—on August 14, 1937 (King 2000:9-12).

The Appalachian Trail bisects the direct and indirect APEs in Bald Mountain Township. Other sections of the Appalachian Trail have been determined National Register eligible by the State Historic Preservation Offices (SHPOs) of Vermont, Massachusetts, and Connecticut, and one segment of the trail in New Jersey has been nominated to the NRHP. A historic context for the Appalachian Trail was developed in 2002 by Dr. Robert Grumet of the NPS Northeast Regional Office. His report established the following historic context for the Appalachian Trail:

The setting of Appalachian Trail history is unique, comprising a 2,175-mile-long undulating ribbon of ridge-line rarely more than 1,000-feet-wide at its broadest points. A complex history has unfolded on this mountain stage, one embracing a wide range of events, incidents, and characters. Overviews summarizing the full sweep of history along the Appalachian Trail reveal broad patterns of continuity and change useful in crafting vision statements and fixing management goals and priorities. Management and protection of particular Appalachian Trail cultural resources preserving vestiges of this history more often require smaller, more comprehensible increments of time, place, and theme.

In 2008, the NPS prepared a resource management plan for the Appalachian Trail. This report proposed that the entire trail corridor is National Register eligible under Criterion A for its association with early regional planning and further stated that sections of the trail could be eligible under other NRHP criteria. It also identified that a significant need remains in “every aspect of cultural resource management to adequately protect, manage, and interpret cultural resources along the Appalachian National Scenic Trail” (NPS, 2008). Historic resource surveys, cultural landscape inventories and reports, and National Register identification and documentation are either in progress, or have only been completed for specific locations and sites.

In Maine, the Appalachian Trail is likely eligible for its landscape design and association with hiking clubs (e.g., AMC), the conservation movement, and the Civilian Conservation Corps. The proposed period of significance is ca. 1920-1968. To date, the MHPC has not made a determination of eligibility on the 452.2-km (281-mi) section of Appalachian Trail that traverses Maine. SEARCH contends that the trail retains all aspects of integrity and is significant under Criterion A for its association with outdoor recreation.

Bakers Station Work Crew Housing (ID-68) on Troutdale Road in Bald Mountain township is a two-story stick style influenced house with fieldstone foundation that is recommended eligible for NRHP listing under Criterion A for Transportation and associations with the early development of the Lake Moxie/Troutdale/Baker Station Historic District, and Criterion C: Architecture as a rare and intact example of Stick Style architecture in the area. The west-facing one-and-a-half story cross gable, 3 bay wide house with clapboard siding has a two-story, hipped roof projecting bay entry with paired, narrow, one-over-one double hung windows on the second floor, beneath which is a bracketed awning roof over a small entry porch. There are two-over-two double hung windows flanking the entry on the front façade, and centered on

both stories on the gable ends, which also have decorative brackets in the peaks. A shed roof enclosed porch on piers is located inside the southeast corner. Baker's Station was a flag stop on the Somerset Railroad. This is one of two nearly identical houses where section crew workers and their families lived (MacDougall 2000:134-135). The period of significance starts when the house was built 1890s through 1933 when Somerset ceased operation. The building retains most aspects of integrity, with minimal alterations or loss of materials and workmanship. Overall, the property retains sufficient integrity to convey its historical significance, and is recommended NRHP eligible.

Bakers Station (ID-69) on Troutdale Road in Bald Mountain township is a two-story, Stick Style-influenced house with a fieldstone foundation. The building is recommended eligible for NRHP listing under Criterion A for Transportation and for associations with the early development of the Lake Moxie/Troutdale/Baker Station Historic District, and under Criterion C: Architecture as a rare, local example of Stick Style architecture in the area. Baker's Station, also known as Baker's, was a flag stop on the Somerset Railroad. The small community had two identical houses where section crew workers and their families lived (MacDougall 2000:134-135), and a unique two-story house style train station. The west-facing, one-and-a-half story, cross gable, 3 bay wide house with clapboard siding has a two-story hipped roof projecting bay entry with paired, narrow, one-over-one double hung windows on the second floor, beneath which is a bracketed awning roof over a raised deck entry porch. There are two-over-two double hung windows flanking the entry on the front façade, and centered on both stories on the gable ends. A shed roofed enclosed porch on piers is located inside the southeast corner, and shed roofed addition inside the northeast corner. The period of significance starts when the station was built 1890s through 1933 when Somerset ceased operation. The building retains most aspects of integrity, with minimal alterations or loss of materials and workmanship. Overall, the property retains sufficient integrity to convey its historical significance, and is recommended NRHP eligible.

Appendix Map Number 9

Culvert (ID-1289) Located on Station road west of Route 201 and south of Wyman Dam in Moscow. The culvert is recommended eligible for NRHP listing under criteria A: Transportation; and C: Design. The concrete box culvert with wooden sluice on the downstream side carries water from Temple Pond. The culvert goes under Station Road and is part of a canal that runs between Canada Road/Route 201 to the north and about 200 feet south of Station road. It directs water from Temple Pond's outlet down to a stream that leads to the Kennebec River. Overall the **Culvert (ID-1289)** retains all aspects of integrity; the wooden sluice has undergone repairs/replacements but retains integrity of workmanship. For these reasons, the culvert is recommended NRHP eligible, and the proposed period of significance is early 20th century through 1968.

Appendix Map Numbers 9, 10, 10 a-b, 10d-e

The Bingham Village Historic District (ID-1592) was not previously surveyed as a historic district, but the majority of the resources within the downtown area of Bingham were previously surveyed and determined NRHP eligible by MHPC (**ID 112-135, 137-147, 149-180,**

228 and 1546). Field survey by SEARCH in April 2018 suggests that preliminary district boundaries may include the Kennebec River to the north and west, Wing Street to the south, and the terminus of Owens Street to the east. The district is composed of nineteenth- to early twentieth-century residential areas that radiate from the Main Street. Main Street features commercial and municipal buildings dating from the late nineteenth to early twentieth centuries (**ID 181-199, 209-227, 229-238**). The western edge of the district along the Kennebec River features a former paper mill, which provided the economic growth of the town at the turn of the twentieth century (**ID 200-208**). The mill currently stands vacant.

Bingham began as a frontier settlement in the eighteenth century. Philadelphia banker William Bingham purchased a million acres of Massachusetts land inclusive of present-day Bingham in 1785 (Federal Writers' Project 1937:333). The first settlers in what later became Bingham, however, were William and Sarah Fletcher who arrived in 1784. Ephraim Wood soon followed. The emerging settlement was known in this period as Carrytunk. Both Fletcher and Wood were from Norridgewock. Fletcher built a mill on Austin Stream and cleared land for farming. Much of the business section of Bingham is located on Fletcher's former land. Fletcher and his wife are buried in Bingham's village cemetery. Wood was Bingham's first Town Clerk and a proponent of the town's incorporation. Other early families of significance were the Goodriches, the Parlins, Fosters, Chases, and Churchills. Many of these families received title to their lands from Bingham by 1800 (History Committee of the Bingham Sesquicentennial [HCBS] 1962:7-8, 24).

The initial settlers to the Bingham area established log houses, farms, and mills along the Kennebec River and Austin Stream. A new wave of settlers established homesteads in the undeveloped, eastern hills of Bingham in the early nineteenth century. The Gilmans, Spoffords, McIntyres, Clarks, and Johnsons were among these settlers. Their children and descendants remained in the area, clearing land and establishing their own homesteads in other areas that ultimately became the town of Bingham (HCBS 1962:19-20).

In 1811, twenty-six prominent settlers of "Township No. one—first Range, east of Kennebeck River" came together to sign a petition to the Commonwealth of Massachusetts to incorporate the Town of Bingham. The Commonwealth approved the incorporation in 1812. The first town meeting raised money for a school to be located on the Kennebec River. Completed in 1815, the site later was memorialized with an inscribed boulder. By the end of the century, other schools had replaced this early one and the town founded Bingham High School (HCBS 1962:32).

The early residents of Bingham belonged to the Congregationalist, Methodist, Universalist, and Baptist faiths. To accommodate their meetings, the Union Free Meeting House Society built a church in 1836 that all could use. The Congregationalists ultimately took over the building and they remained a prominent religious group in Bingham into the twentieth century (HCBS 1962:38-39).

One of the first businesses in Bingham was a tavern. Built by Levi Goodrich in 1822, the two-story frame structure was located on the west side of the main road through Bingham. For years to come, the Goodriches catered to travelers along the road. Over the years, the building was enlarged and became known in the twentieth century as the Bingham Hotel (HCBS 1962:48-49).

By 1860, Bingham was an important, if small, market town with a business section. Some of the business operators along Main Street, as listed in an 1860 map, were Mrs. S. Putnam (dress maker), Abner Dinsmore (shoe maker), Jesse Smith (blacksmith), H.J. Abbey (carpenter), Dr. Z. Spaulding (physician), Chandler Baker (Bingham Hotel), and Benjamin Smith (merchant) (Old Canada Road Historical Society 1860).

A significant development of the late nineteenth century in Bingham was the completion of the Somerset Railroad. On June 12, 1890, workers drove the final spike of the railroad in Bingham and, a week later, the first shipment—ten cars of last blocks (i.e. shoe molds)—departed the town. Passenger service began shortly thereafter. By the early twentieth century, Bingham boomed as the terminal of the Somerset Railroad until the rails were continued towards Deadwater and Kineo. In 1911, the Maine Central Railroad acquired the line, continuing service for several decades (HCBS 1962:64).

The railroad influenced new businesses to open in Bingham's town center into the early twentieth century. Preble & Robinson sold wholesale and retail groceries. Ervin Moore operated a barber shop. Frank Hunnewell opened a restaurant and market. Through the years, the business center hosted a post office, a telephone company, a men's clothing store, various drug stores, a liquor store, a hardware store, and other businesses (HCBS 1962:68-69).

Bingham continued to thrive from its location on a regional road which had begun around the turn of the nineteenth century as a stagecoach road connecting Skowhegan with the Fork. Earl Folsom built nine tourist cottages on Lander Avenue in the late 1920s. Initially, the cottages housed workers involved in the construction of the Wyman Dam. After the dam was completed, the cottages became a tourist motel. Henry Lange and Vernard Pierce developed another camp, this one along the Kennebec River, in the 1950s that was known as Maple Wood Springs Camp (HCBS 1962:51, 62).

Due to its abundant forests and transportation infrastructure, Bingham became a flourishing center for the timber industry. In the pioneer days, farmers lumbered between seasons for added income. This activity evolved to an industrial scale during the nineteenth century. While there were other industries such as a tannery, grist mills, brickyards, and blacksmiths, the timber industry was the most varied in Bingham. In 1889, the Bingham Last Block company organized in the town to produce wooden shoe molds. Another firm, the Tucker-Lovell Company, established the largest last block plant in Maine in Bingham. There also were numerous sawmills that produced cut timber, veneer, plywood, and other construction wood well into the twentieth century (HCBS 1962:72-78).

The population of the town of Bingham was 1,590 in the late 1930s. The construction of the Wyman Dam caused what has been described as “a complete economic change in the town” (Federal Writers’ Project 1937:333).

The district embodies the characteristics and feel of a nineteenth-century industrial village. Many buildings within the district retain a high degree of architectural integrity, and as whole, very little modern intrusions are visible. The village is likely historically significant under Criterion A: Development and Industry for its commercial and industrial role in the development of Bingham in the late nineteenth to early twentieth centuries, and many buildings have already been determined architecturally significant. The proposed period of significance for the district is the early nineteenth century through 1968.

Appendix Map Number 12

The **Robert Garland Bridge #2615 (ID-1174)** on N. Main Street over the Carrabassett River in Anson, is recommended eligible for listing in the NRHP. Known as the Robert Garland Bridge (#2615), it was built in 1932 with a steel span on a steel girder and features a decorative concrete rail. The resource is a typical example of an early-twentieth century bridge that is locally significant and contributes to the setting, feeling, and association of a late nineteenth/early-twentieth century New England town. This resource is recommended as eligible for listing in the NRHP under Criterion A: Transportation for its association with the early development of Anson. The bridge is in fair condition and retains integrity of materials, workmanship, setting, location, feeling and association. The proposed period of significance is 1932-1968.

327 Fahi Pond Road (ID-1251 and ID-1252), is an agricultural property containing a house and barn. The house (**ID-1251**) is an example of mid-nineteenth century Cape Style residential architecture, while the barn (**ID-1252**) is a good example of a mixed-use barn dating to the mid-nineteenth century. The five-bay house faces south and has a side-gable roof, horizontal wood-board siding, two-over-two sash windows, and a central door with sidelights. It has a rear ell addition and engaged brick chimney on its east elevation. The barn has a rectangular footprint and gable roof. It has a garage door and vertical wood siding on its north side. The garage door was added sometime after 2011 (per Google Streetview, which shows a sliding barn door in this location in 2011). The barn has narrow rectangular windows and shingle siding on its west elevation. The barn has shingle siding on its south elevation. Both the house and barn have standing seam metal roofs. The property appears to have operated as an agricultural property, though aerial imagery shows that the size of maintained fields has significantly reduced since 1953. The 1953 aerial image shows that the house has retained the same footprint since that time. Aerial imagery shows that a shed roof addition on the north side of the barn was removed sometime after 1996. Overall, the property is a good example of a mid-nineteenth century farmstead in the North Anson area, and the house (**ID-1251**) and barn (**ID-1252**) are recommended eligible under Criterion A for Agriculture/Farming with a period of significance of ca. 1850-1968. Further, the house (**ID-1251**) is a good example of an intact Cape Style residence, and is recommended eligible under Criterion C: Architecture with a ca. 1850 period of significance. The buildings remain in a rural setting amid agricultural fields, and retain

high integrity of location, setting, feeling and association. There have been some changes to the form and materials of the barn, but the house retains high integrity of design, materials and workmanship. Overall, the property retains sufficient integrity to convey its significance under Criteria A and C. Research did not reveal associations with significant persons under Criterion B. For these reasons, the property is recommended NRHP eligible.

Appendix Map Number 13, 13a

The **farmhouse and detached barn (ID-1159 and 1160)** located at 905 River Road in Anson is situated north of the town and less than 400 feet south of the Carrabassett River and North Anson center, with direct water access. The house is situated at the intersection of River Road and Union Street, on the north side of River Road on a small hill with woods acting as a buffer between the home and the river and a small pasture to its east. The property is eligible for listing on the National Register under Criteria A: Agriculture/Farming, and C: Architecture as a local example of a mid-nineteenth century Cape Cod modified with Greek Revival elements. The uniqueness of the home gives the feeling that it was associated with a wealthy person in the area, although no information could be found to support this. The two-story home has a five-bay east-facing primary façade with a side-ell. The home has cross-gable complex roof with moderate eaves and cornice returns. The gable ends have steep pitches, while primary façade and rear elevation, along with the west and east elevations of the side-ell have low-pitch shed roofed wall dormers that are just short of the entire length of the home which give the home a full-height second story on the interior. There is also a sleeping porch or sunroom on the north elevation. The home has three brick chimneys. The first is an interior chimney on the west end of the rear dormer on the main portion of the home, the second is an interior chimney near the ridge line intersections of the home, and the third is a large tapered exterior chimney that is on the north elevation of the home. The home is clad in clapboard siding, and pilasters at the corners of the home. There are a variety of wood windows visible on the home with simple cornices; several appear to have functioning shutters. The primary façade of the home has at least one large visible picture window framed by two narrow one-over-one units, while the second floor has three triple units consisting of a three-over-one unit flanked by two-over-one units and functioning shutters that would cover the end units. The sunroom appears to have a series of casement windows. The south elevation of the main home and side-ell have single two-over-one double-hung sash units, paired two-over-two double-hung sash units, and at least one six-over-six double-hung sash unit. The front porch is sheltered by a full-length low pitch shed roof clad supported by slightly tapered vernacular rounded columns with square capitals and bases. Four of these columns are equally distributed across the wood porch deck. A single entrance is visible under the shelter of the porch roof on the north end of the façade but is difficult to discern due to the distance from the public right-of-way. A second entrance may be present on the south end of the façade but is obscured by vegetation. The residence and barn at 905 River Road retain their historic landscape, set on a hill overlooking the Carrabassett River to the north and west, and pastureland and woods to its east and southeast. Limited alterations, if any, have been done in recent years to the home. The residence retains its integrity of location, design, setting, materials, workmanship, feeling, and association and is an excellent example of a transitional Cape Code / Green Revival home and vernacular barn dating

to the mid to late nineteenth twentieth century in Anson. The proposed period of significance for the farmstead is the mid-nineteenth century through 1968.

Appendix Map Number 13a

The **single-family residence** at the corner of Union Street and River Road (**ID-1161**), located in Anson, is recommended eligible for listing in the NRHP. Constructed c. 1890-1900 in the vernacular tradition, the resource features Colonial Revival style detailing including a side gable roof, symmetrical façade, wide corner boards and a 1-story porch supported by Doric columns. The resource is a typical example of a late-nineteenth century residential construction that is locally significant and contributes to the setting, feeling, and association of a late nineteenth/early-twentieth century New England town. This resource is recommended as eligible for listing in the NRHP under Criterion A: Community Planning and Development for its association with the early development of Anson. The resource is also recommended under Criterion C: Architecture as an intact example of the Colonial Revival Style. The dwelling is in good condition and retains integrity of materials, workmanship, setting, location, feeling and association. The proposed period of significance is c. 1890-1968.

The **single-family residence (ID-1169)** with connected **barn (ID-1170)** at 26 Union Street in Anson, is recommended eligible for listing in the National Register of Historic Places. Constructed c. 1890-1900 in the vernacular tradition, the residence features Second Empire style detailing including a mansard roof with decorative bargeboard. The barn, constructed c. 1890-1900 in the vernacular tradition, features a New England plan with clapboard siding and a gable front roof. The resource is a rare and unique example of a late-nineteenth century connected farmhouse that contributes to the setting, feeling, and association of a late nineteenth/early-twentieth century New England Town. This resource is recommended eligible for listing in the NRHP as locally significant under Criteria: A Agriculture/Farming, and C: Architecture as a unique and intact example of a Second Empire connected farmhouse. The dwelling is in good condition and retains integrity of materials, workmanship, setting, location, feeling and association. The proposed period of significance is c. 1890-1968.

Appendix Map Number 14

The farmstead (**ID-1603**) located at 23 Horseback Road in Anson, constructed ca. 1890 to 1900, includes a residence (**ID-1125**), a connected barn (**ID-1126**), and a detached barn (**ID-1127**). It is situated on the northern outskirts of Anson, approximately 0.5 miles west of the Kennebec River. The home sits on a small hill surrounded by pastureland and woods to the west and east and woods to the north and overlooks a small pond that is down by the road. The farmhouse and barns are eligible for listing in the National Register under Criterion A: Agriculture and Farming, and Criterion C: Architecture as an intact local example of a connected late twentieth century farmstead with Greek Revival elements. The connected farmhouse is an architectural form distinct to New England that relied on the connection of a larger house, a small house, and agricultural barns through direct additions and a series of ells. The continuous form represented both a practical use for protection from the elements, as well a symbolic function of the progression of agricultural improvement (Hubka 1984). This two-story vernacular home

with Gothic Revival elements has a south-facing façade with five bays. The main house section has a steeply pitched cross gable roof with moderate eaves and cornice returns on the north and south gable ends. There are a pair of steep cross gables on the primary façade, which are indicative of the Gothic Revival style. The little house section of the home has a moderate side gable roof with a low pitch shed roof dormer; the moderate side gable roof continues onto the back-house portion, and the connected barn (**ID-1126**) has a steeply pitched cross gable roof with moderate eaves and cornice returns. There is an interior brick chimney centered on the roofline of the main house, and another on the back slope where the little house and back house meet. The foundation of the home is obscured. Both the main house and the little house have a wide replacement siding of unknown material, while the back house and barn retain the original clapboard siding. wide variety of windows are present on the house and connected buildings. Six-over-one wood double hung sash units flanked with decorative shutters are present on the primary façade, with a small one-over-one wood double hung sash unit on the second floor of the west elevation. A pair of one-over-one wood double hung sash units are on the dormer, while a hipped roof enclosed porch is lined with one-over-one wood double hung sash units. On the back-house portion of the home, one-over-one wood double hung sash units are to the right of a single car garage opening, while two-over one wood double hung sash units are to the left. A fixed window unit with divided panes is obscured behind several trees, as well as a single pane fixed window on the barn. There is a pair of swinging barn doors is on its first floor as well as a set on the second floor. The main entrance is obscured by ornamental trees but is sheltered by a small hipped pediment supported by decorative brackets. The entrance into the little house section is a glazed panel door, material type unknown. The detached two-story vernacular barn (**ID-1127**) is behind the main house and connected barn, to the north. It has a moderately pitched side-gable metal roof with a shed roof addition on the east elevation. Because of the distance. It has a New England plan, and is clad in clapboard siding. The types of windows and entrances cannot be discerned due to the distance from the public right-of-way. The farmstead located at 23 Horseback Road retain its historic landscape, surrounded by open pasture and agricultural fields to the east and west with woods to the north. Limited alterations include replacement siding on the main and little house sections. The residence retains its integrity of location, design, setting, materials, workmanship, feeling, and association and is an excellent example of an intact farmstead dating to the late nineteenth century in Anson. The proposed period of significance is c. 1890-1968.

The Madison Branch of the Maine Central Railroad (ID-1146) enters the Project area in the northern outskirts of Anson and crisscrosses the indirect and direct APE twice before exiting just north of the village of North Anson. The railroad consists of the its roadway, which is the extend of the right-of-way that was modified for the railroad bed complete with any cuts, fills, and ditches. The wide-gauge railroad is on a raised railroad bed with ballast with steel rails and wood railway sleepers. This section of the railroad was constructed between 1875 and 1877. It was part of the Somerset Railroad, which was established in 1861, but work on the line did not commence until 1868 when the Maine Central Railroad invested \$50,000 into the company under the intention that it would eventually lease the line (Chase 1926:66-67; MacDougall 2000:6). The railroad originated in Oakland, West Waterville at that time, and followed a line that was originally proposed by the Somerset and Kennebec Charter but never constructed. The

railroad reached Norridgewock by 1873, and Madison by 1875 (Chase 1926:66-67). By 1877, the railroad had been laid through Anson, which boasted its own station due to its investment in the venture, to North Anson which was its northern terminus until 1889, when it reached Solon (Chase 1926:100-101; MacDougall 2000:6-7). During the construction between North Anson and Solon, the railroad's mortgage was foreclosed on and it was reorganized. The railway was sold to the Kennebec Valley Railroad Company and renamed as the Somerset Railway in 1904. Three years later, in 1907, the Maine Central Railroad issued \$1.5 million in bonds and assumed control of the railroad. The railway officially merged with the Main Central Railroad along with the Washington County Railway and the Sebec and Moosehead Railroad through a legislative act in 1911, but it was not until 1929 that the Somerset Railway was officially dissolved (Chase 1926:106; MacDougall 2000:6-7). The railroad is eligible for listing in the National Register under Criterion A: Transportation for its role in providing a new method of transportation in Somerset County, Maine during the late nineteenth century, fulfilling the transportation need of the local residents and for local resources to outside markets. The proposed period of significance is c. 1875-1929.

Appendix Map Number 14a

The residence and connected barn (**ID-1119 and ID-1120**) located at the end of Ward Street in Anson was constructed ca. 1890 to 1900 and is situated approximately 0.25 miles west of the Kennebec River. This late-nineteenth century Colonial Revival is eligible for the National Register under Criterion A for Agriculture, and Settlement and Community Development of Anson, as well as under Criterion C for Architecture as an intact local example of a connected late-nineteenth century Colonial Revival farmstead having rare architectural features. The home has a cross gable on the primary façade with a gambrel roof. Both of features on their own are relatively rare to Colonial Revival homes. Less than 5% of Colonial Revivals have centered gables and approximately 10% have gambrel roofs influenced by the Dutch homes; centered gables are typically found on high-style Georgian or Federal homes (McAlester 2013:410). The connected farmhouse is an architectural form distinct to New England that relied on the connection of a larger house, a small house, and agricultural barns through direct additions and a series of ells. The continuous form represented both a practical use for protection from the elements, as well a symbolic function of the progression of agricultural improvement (Hubka 1984). This two-story Colonial Revival farmhouse has an unknown interior plan with five bays on its east-facing primary façade. The home features a steeply pitched cross-gable metal roof with moderate overhangs and cornice returns, and a centered gable with a gambrel roof on the primary facade. A wide frieze board is on the primary façade with trim mimicking square columns at its corners. Attic vents are present in the visible gables. The home has a rear-ell and two connected barns. Three interior brick chimneys appear to be on the home. The first is on the front slope of the roof slightly offset to the north from its intersection with the gambrel roof, the second is centered on the ridge line of the rear-ell, and the third is centered on the ridge line of the first connected barn. The exterior of the home is clad entirely in clapboard siding. There are a variety of window types present as some have been replaced over the years. There are wood one-over-one wood double hung sash units with entablatures featuring peaked and possible ogee pediments. The entablatures over the second story windows on the south elevation are connected by a long piece of trim. A wood picture

window with two single panes flanking the central unit is to the right of the centered gable; no entablature is present over this unit. A second picture unit is on the second story of the center gable. The square central fixed pane is flanked by two narrow one-over-one wood double hung sash units. A simple set of painted stairs with a metal railing lead up to the modern storm door leads into an enclosed porch with large fixed windows spanning the upper two-thirds of the walls. The front door into the home is visible through the windows and has entablature featuring a triangular pediment. The exterior walls above the enclosed porch flare out slightly, creating the illusion that the second story walls become a roof. The foundation of the house is not visible. The first connected section behind the rear-ell currently serves as the home's garage and has a moderate pitch roof clad in metal with clapboard on the exterior walls. The structure once had three single-car garage doors and one door. The door appears to have been exchanged for a wood panel section with a one-over-one fixed window, while the third garage door was removed and replaced with part of a wall and two wood panel sections with four-pane divided lights. The two garage doors are rolling units with small divided windows. The connected one-story vernacular barn (**ID-1120**) was built around the same time as the home during the late-nineteenth century. The barn has a moderately pitched side-gable roof clad in metal with a cupola with a one-over-one window on its east elevation. The exterior of the barn is clad in vertical board siding. A single pane wood window is visible on the east elevation, and a sliding barn door is flanked by two single pane wood windows on the south elevation. The farmhouse and connected barn located at the end of Ward Street in Anson retain its historic landscape, surrounded by open pasture and agricultural fields with minimal modern residences immediately nearby. Limited alterations to the farmhouse include replacement windows, a modern storm door, and fenestration alterations to the garage bays. The residence retains its integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is c. 1890-1968.

Appendix Map Number 14b

The **residence at 77 Preble Avenue (ID-1117)** located in Anson, Somerset County, is situated on the east side of Preble Avenue at its intersection with Hilltop Road. The Kennebec River is approximately 0.14 miles to the west of the structure. It is recommended eligible for listing in the National Register under Criterion A in the area of Community Development, as well as Criterion C: Architecture for being an intact local example of a Queen Anne that retains most of its integrity. The circa 1900 home is two stories tall, with a south-facing primary façade featuring four bays and an irregular floor plan. It has a square tower to the right of the main entrance, a side-ell, and a rear-ell. The house has a steeply pitched cross gable roof clad in asphalt shingles with moderate eaves and cornice returns. There are two interior brick chimneys: the first is on the front slope of the home towards the north end, and the second is centered on the ridgeline of the rear-ell. The Queen Anne features angled woodwork gable detailing above the second story windows that mirror the pitch of the roof, with modest trusses in the gables. The exterior of the home is clad entirely in clapboard siding, with decorative paneling at the top of the tower just underneath the roofline. The original wood windows present on the home are single two-over-two double-hung sash windows and narrow paired one-over- wood double-hung sash windows; at least four windows have been replaced over the

years with vinyl six-over-six single-hung sash units or one-over-one single-hung sash units. With the exception of the paired windows to the left of the main entrance and the windows on the first floor of the side-ell that have simple trim, all of them feature rectangular pediments. The house is elevated approximately 1' on an unknown foundation. The main entrance is a glazed wood panel door sheltered under a segmental pediment roof supported by brackets. The entrance leads into what appears to be an enclosed porch with a low pitch metal shed roof; simple wood steps lead up to a wood deck with no railing. On the north side of the enclosed porch is a small porch gazebo with spindlework and a flared roof. A secondary entrance is on the east elevation's side-ell. Like the main entrance, it appears to open into an enclosed porch with a low pitch metal shed roof is flanked by three two-over-one wood double-hung sash windows to either side and has a segmental pediment roof supported by brackets. Concrete steps lead up to the entrance. There are no windows or entrances on the north elevation of the rear-ell. With the exception of the replacement of several windows, alterations to the home have been minimal over the years. The residence retains its integrity of location, design, setting, materials, workmanship, feeling, and association, and is an excellent example of an intact Queen Anne in the Anson area. The proposed period of significance is c. 1900-1968.

Appendix Map Number 14g

Spencer's Service Station (ID-1060) located at 149 Main Street, Anson. Recommended eligible for NRHP listing under criteria A: Community Development, Transportation; B: Person; and C: design/architecture. According to a local resident this is the oldest and was longest continually operating service station in the state of Maine. Although the gas pumps are no longer extant, compromising integrity of design and materials, **Spencer's Service Station (ID-1060)** still retains integrity of location, setting, feeling, association, and workmanship. The proposed period of significance is mid-twentieth century through 1968.

Appendix Map Number 15

The Athearn Cemetery (ID-1034) is located on the west side of Starks Road just north of the Anson – Starks Town Line in Somerset County, in the area known locally as Five Corners. The cemetery was included in a prior survey (Project ID 0901-11) that was completed in July 2011, but it has not been reviewed by the MHPC. Per the previous form, the cemetery was established during the mid-nineteenth century, shortly after the area was settled and has a decorative chain / wire fence and metal entry archway with the cemetery's name present. Per the previous Survey Form, there are approximately 200 burials within the boundaries of the cemetery, with most of the headstones being made from marble although granite headstones are present as well. It is also noted that many members of the Hilton and Greenleaf families are buried at the Athearn Cemetery. The Hilton family has been in the area for several generations, owning several large farms on Hilton Hill west of Anson, and the Hilton Coal and Oil in the early twentieth century (Anson Bicentennial Committee 1998: 24, 31). The cemetery is eligible for listing in the National Register under Criterion A for Settlement with ties to the development of the agricultural-based communities of Anson and Stark, Criterion B for its ties with early decades of the settlement of Anson which was organized in 1798 and association with the prominent families from that era, and Criterion C for Design and Architecture. The cemetery is

bounded by Starks Road on the east and the headstones are oriented to the west, facing away from the road and toward the setting. The memorials are good examples of typical mid-1800s style and design, and there is a unique crypt in the northern portion of the cemetery that has been surrounded by earth to give the appearance of it being placed into the side of a hill (Chadbourn 1957: 51). The cemetery retains its integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is mid-nineteenth century through 1968.

The **Athearn House (ID-1035)** located just north of Athearn Cemetery, known locally as Mrs. Athearn's House, was constructed circa 1860. It is situated on the west side of Starks Road in Anson, in the area known locally as Five Corner, and the Kennebec River is located 1.17 miles to the east of the property. It is eligible for the National Register under Criterion A: Settlement for being a home constructed around the time that Anson and its vicinity began to flourish and expand, as well as Criterion C under Architecture for being an intact example of a mid-nineteenth century brick residence with Greek Revival elements in the Anson vicinity. The home was included in a prior survey (Project ID 0901-11) that was completed in July 2011, but it has not been reviewed by the MHPC and has not had an inventory number assigned yet, although a MHPC Historic Building/Structure Survey Form is available on the CARMA Map Viewer. The one-and-a-half story vernacular residence with Greek Revival elements has two rear-ells; the middle was constructed prior to 1953, while the rear was constructed between 1953 and 1996 per a review of available aerial imagery. The house has an east-facing primary façade with five bays and a central hall and parlor floor plan. It has a cross-gable roof clad in metal with moderate eaves. The home has a single interior brick chimney, on the ridgeline of the roof at its southern end. The original side gable portion of the home a brick exterior, while the rear-ells have aluminum siding. The home also has a granite foundation. Visible windows on the side gable portion of the home are two-over-two wood double-hung sash units with a wide rectangular decorative granite crown on top of the windows. The main entrance, which has a wood deck and stairs on top of a brick foundation with metal railings, is a glazed wood panel unit flanked by divided wood panel sidelights with a Palladian transom. The south elevations of the rear-ells appear to be an all-weather room with screening, and two single car garages. While the historic-age rear-ells of the home have had numerous alterations, the original mid-nineteenth century brick section of the home has retained most of its integrity. Visible alterations are the replacement metal roof and front landing and metal railing. The residence retains its integrity of location, design, setting, workmanship, feeling, and association, and is an excellent example of a Greek Revival influenced vernacular mid-nineteenth century residence in the Anson area. The proposed period of significance is c. 1860-1968.

Appendix Map Number 15a

The **E. Gray Farm (ID-1028)**, located at 1294 Anson Road/RTE 43 in Starks, is recommended eligible for listing in the NRHP under Criteria A for Agriculture/Farming and settlement, and C Architecture for intact center hall house. Positioned on the west side of Starks Road, the farmstead consists of 12 separate structures, including a primary house (**ID-1022**), garage (**ID-1033**), dairy barn and two milk houses (**ID-1023**, **ID-1024** and **1029**), shed (**ID-1027**), original house (**ID-1025**), stable (**ID-1026**), barn (**ID-1030**), hay barn (**ID-1032**), chicken house (**ID-1031**),

and modern chicken coop. The primary residential structure is closest to Anson Road, and the remaining agricultural structures are located to the west and north, with the exception of the garage which is located on the east side of Starks Road. The main residence is constructed in a vernacular style with Cape Cod stylistic influences and includes additions to the south and west façades, creating an L-shaped plan. *The People and Places of Starks* notes that the house was built in 1886, but that the smaller portion attached at its south elevation perhaps dates as early as 1811 (when the land was deeded to George and Joshua Gray). The book states that the main barn dates to 1880 and the dairy barn dates to 1961. The property primarily operated as a dairy, and the milk houses were likely added in the 1930s. Minor material alterations include the replacement of exterior cladding and windows. The farmstead has a mixed agricultural use with pastures and crop lands that extend to the north, south, and west of the farmstead buildings. The E. Gray Farm is a locally important example of an intact farmstead that retains its historic agricultural landscape setting and function to represent the mid- to late nineteenth century agricultural development in Somerset County. The farmstead retains high integrity of location, design, setting, feeling, and association and overall retains sufficient integrity to convey its significance for agriculture under Criterion A and architecture under Criterion C. The proposed period of significance is c. 1811-1968.

Appendix Map Number 15b

The B. F. Hilton Farm (ID-1020), located at 1195 Anson Road/RTE 43 in Starks, is recommended eligible for listing in the NRHP under Criterion A for Agriculture and Settlement, and Criterion C for Architecture as an intact local example of a connected mid-nineteenth-century New England farm. According to *The People and Places of Starks*, the Hilton Family arrived in Starks in 1780. They owned several properties in the area. This property operated as the Hilton Stock Farm, and was established by Bert Hilton, the son of Benjamin Franklin (B.F.) Hilton (B.F. Hilton and his father were the original owners of the property). The stock farm advertised the sale of breeding stock and bred Double Standard Polled Jerseys, Herefords, and White Wyandottes. Positioned on the east and west sides of Anson Road, the current property configuration consists of several buildings. The two-and-one-half-story Greek Revival house (**ID-1017**) has two, one-story house additions on the east façade, both constructed in a vernacular style. A storage/dairy barn (**ID-1018**) is connected to the eastern façade of the small addition, completing the connected complex. Constructed ca. 1840, the connected farmhouse is an architectural form distinct to New England that relied on the connection of a larger house, a small house, and agricultural barns through direct additions and a series of ells. The continuous form represented a practical use for protection from the elements, as well a symbolic function of the progression of agricultural improvement (Hubka 1984). The connected residential complex is located on the east side of Anson Road, along with a small sheep barn (**ID-1019**) while several vernacular style agricultural barns are located on the west side of the road. A large dairy barn (**ID-1016**), ca. 1880s, dominates the property on the west side of the road. The barn has a gable roof and wood siding. It features decorative molding on the corners. The barn has a number of additions, including a ca. 1930s milk house (**ID-1015**) attached at the southwest corner. At the northwest corner a ca. 1930s arched roof barn and gable-on-hip roof barn (**ID-1014**) are attached to the primary barn. Located in a primarily rural and undeveloped setting and maintaining its historic rural viewshed, the farmstead retains its historic agriculture

landscape, including open pastureland to the north, south, and west of the connected structure. According to *The People and Places of Starks*, the house began as a few rooms built in 1840, and was expanded to its present size in the 1930s (the increased size accommodated paying guests). The connected residential structure and barn complex include replacement roofing and windows. A 1910 photograph of the barn (*People and Places of Starks*) shows the building prior to the milk house and secondary barn additions. Additions to both the house and the barn are historic and speak to the evolution of the property over time. As such, the farmstead retains a high degree of architectural integrity and spatial arrangement, including its agricultural setting with intact pastureland, as well as the setting of the connected structure closer to the road edge, as would have been common with this type of building construction (Hubka 1984). The property retains integrity of setting, location, design, feeling, and association and overall retains sufficient integrity to convey its significance. The proposed period of significance is c. 1840-1968.

Appendix Map Number 20

The farmstead (**ID-969**) is composed of several contiguous parcels currently owned by the same individual; these are located at 513 and 520 Davis Road, and 602 Bailey Hill Road east of the town of Farmington (**ID-970 through ID-975**). These properties are situated in an area of Farmington known as Bailey Hill, which is associated with Oliver Bailey, an early settler in Farmington. Bailey played a prominent part in the development of Farmington during its early years after he settled there in 1788. He was appointed one of ten surveyors of highway for the town at the first town meeting on April 7, 1794, which would be the first of many roles he would fill (Butler 1885: 45, 69. Bailey was part of the group that was responsible for establishing the first religious structure in town after the turn of the nineteenth century, which served the numerous religious denominations that were represented in the community. Bailey himself contributed \$90.00 for pew No. 5, on the broad aisle (Butler 1885:80-81). He is also listed as a donor to the Farmington Academy, and was a member of the Board of Trustees for the school from 1814 to 1829, when he passed away (Butler 1885:101). Other roles that Bailey filled for the community were as a Lieutenant Colonel in the Militia of the Commonwealth of Massachusetts, Town Moderator in 1809, and president of the Trustees of the Farmington Ministerial and School Funds beginning in 1811, which was a group that administered land set aside for religious and school development. Bailey also served as one of three Town Selectmen from 1806 to 1811, and in 1814 (Butler 1885: 114, 138, 329, 332).

The historic-age buildings associated with 513-520 Davis Road are an early nineteenth century farmhouse (**ID-970**), a mid-twentieth century silo (**ID-971**), and early twentieth-century haybarn with a twenty-first century addition (**ID-972**). There is also one modern hay barn, one modern dairy barn and milk house, and one modern cow shed. To the southeast, on an adjacent property, is a mid-nineteenth-century vernacular farmhouse (**ID-974**), a mid-nineteenth century mixed-use barn in poor condition (**ID-975**), and a partially collapsed late-twentieth century metal Quonset building. The 1820 farmhouse on the Davis Road property is a vernacular one-and-a-half story vernacular residence with both a side and rear-ell. The main portion of the house has a steep pitch side gable roof with enclosed eaves. The side-ell, on the eastern elevation of the house, has an extremely low pitch shed roof, while the rear-ell has a steeply

pitch front gable roof. The entire roof is clad in asphalt shingles. There are three chimneys present; a brick chimney is on the ridgeline of the main section of the home, a parged chimney is on the eastern elevation between the main section and the side-ell, and another parged chimney on the ridgeline of the rear-ell. The gable ends of the home are clad in vertical wood boards, while the other surfaces are clad in wide aluminum or vinyl siding. The foundation type is obscured and cannot be discerned. The windows are replacement six-over-six vinyl single-hung sash units with decorative shutters, a large fixed window, one-over-one aluminum single-hung sash units, and a two-over-two wood double-hung sash unit. The south-facing primary façade has five bays. The centered front entrance is sheltered under the eaves of the house; the door type is obscured by a modern storm door and is flanked by sidelights with two windows to either side. A second entrance is located on the eastern elevation of the rear-ell but the type cannot be seen due to the angle of available photography, and a vertical wood board door is on the north elevation of the rear-ell with simple wood steps. Southeast of the farmhouse is a three-story concrete silo with a metal dome roof, constructed circa 1940. Immediately north of the silo is a one-story detached vernacular hay barn with clapboard siding. The moderate pitch side-gable roof is clad in metal and the foundation type is obscured from view. The two-section outbuilding immediately adjacent its north elevation was constructed in two separate episodes during 2003 and 2005, respectively. The farmhouse associated with 602 Bailey Hill Road is a one-and-a-half story vernacular residence, constructed in 1857, with two side-ells and an irregular plan. The main portion of the home has a moderate pitch front gable roof with a full-width porch. The porch roof is supported by turned wood columns with lace-like brackets, reminiscent of the Queen Anne style, that rest on a wood porch deck with latticework obscuring the material of the piers. A wood screen door obscures the front door. The side-ell on the east elevation of the farmhouse has a low-pitch shed roof with an inset secondary porch with two bays. The porch roof is supported by a single square wood column, and wood steps lead up to the wood porch deck. A secondary entrance, a metal panel door with a divided nine-pane light, opens into the side-ell. A side-ell with a side-gable roof is on the west elevation; this replaced a flat roof single car garage that can be seen on 2011 Google Street View imagery, and was completed prior to May 2016 (John E. O'Donnell & Associates, Inc. 2016). There is a third porch and entrance on the north elevation of the modern addition; it is a low pitch shed roof that shelters a metal panel door with a divided nine-pane light and a window unit. All of the windows on the house appear to be six-over-six vinyl single-hung sash units with decorative shutters; the exceptions are two small two-over-one wood double-hung sash units in the gable of the primary façade. Directly north of the farmhouse is the two-story detached mixed-use barn, built with a New England plan. It has a moderate pitch side gable roof clad in metal, with clapboard siding on the exterior walls.

These farmsteads are eligible under Criterion A in the area of Agriculture/Farming and the Settlement and development of the area; Criterion B: Person for association with Oliver Bailey, an early settler and prominent resident in the Farmington area; and Criterion C: Architecture as they are examples of early and mid-nineteenth century farms in the Farmington area. While the farmhouses have numerous material alterations, the farmsteads retain their historic agricultural landscapes, surrounded by open pasture. The properties retain their integrity of

setting, location, design, feeling, and association. The proposed period of significance is c. 1820-1968.

The Bailey Hill Dairy Farm (ID-1518) at 639 Bailey Hill Road also includes the parcel at 389 Davis Road and is recommended eligible for NRHP listing under criteria A: Agriculture/Farming, B: Person and C: Architecture. 639 Bailey Hill Road consists of a farmhouse (**ID-976**) on the south side of the road and associated two-story detached barn (**ID-977**) constructed ca. 1940 to 1950. The farmhouse is a one-story Greek Revival building, constructed ca. 1790 to 1820, with three bays on its primary, north-facing façade. The building's cross gable roof is clad with asphalt shingles and features a brick chimney on its interior slope. The exterior walls are clad with clapboard siding. The building's windows are wood two-over-two, double-hung sashes without ornamentation. The barn's exterior walls are clad in vinyl and vertical board siding. The arched roof is clad with metal, and a large addition is located on the building's east-facing façade. The parcel at 389 Bailey Hill Road is on the east side of the road and includes a house (**ID-956**) constructed ca. 1910-1930 on 217 acres. The house is set far back on the parcel and is a single story, side gable with a hipped roof addition centered on the west side (front) and shed roofed addition on the south side. It is 4 bays wide with wood shingle siding, metal roof and shed dormers on the front and back. A dirt access road runs from the center of the Davis Road parcel north then northeast to the Bailey Hill Road parcel. The farmstead is recommended eligible under Criteria A for agriculture/farming and C for Architecture at the local level of significance as an intact example of late eighteenth- to mid-twentieth-century still active farm in Farmington, Maine. The farmhouse and detached barn appear to retain integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is c. 1790-1968.

These properties are also eligible under Criterion B for person: the parcels are situated in an area of Farmington known as Bailey Hill, which is associated with Oliver Bailey, an early settler in Farmington. Bailey played a prominent part in the development of Farmington during its early years after he settled there in 1788. He was appointed one of ten surveyors of highway for the town at the first town meeting on April 7, 1794, which would be the first of many roles he would fill (Butler 1885: 45, 69. Bailey was part of the group that was responsible for establishing the first religious structure in town after the turn of the nineteenth century, which served the numerous religious denominations that were represented in the community. Bailey himself contributed \$90.00 for pew No. 5, on the broad aisle (Butler 1885:80-81). He is also listed as a donor to the Farmington Academy, and was a member of the Board of Trustees for the school from 1814 to 1829, when he passed away (Butler 1885:101). Other roles that Bailey filled for the community were as a Lieutenant Colonel in the Militia of the Commonwealth of Massachusetts, Town Moderator in 1809, and president of the Trustees of the Farmington Ministerial and School Funds beginning in 1811, which was a group that administered land set aside for religious and school development. Bailey also served as one of three Town Selectmen from 1806 to 1811, and in 1814 (Butler 1885: 114, 138, 329, 332).

Appendix Map Number 21

The **Moses Chandler House / The Farmington Conference Center (ID-904)**, located at 216 Whittier Road in Farmington, is situated on the north side of the road. The property is located on the west side of the Sandy River. The two-and-a-half story vernacular farmhouse with Gothic Revival elements has a connected barn, a detached barn, and a general store that was converted into a chapel. The property currently serves as the Farmington Conference Center. The house itself was constructed ca. 1790, with the second story and added ca. 1840. The steeply pitched side gable roof has steep one-bay cross gables, a hallmark of the Gothic Revival architectural style, on both the south and north elevations and is clad with asphalt shingles. A brick chimney is centered on the ridgeline of the home. The exterior of the house is clad in clapboard siding. There are five bays on its primary, south-facing façade, with a small addition on the northwest corner of the building that has and two bays also facing the south. The windows on the primary façade are all six-over-six, wood double-hung sash units without ornamentation. The main entrance is a wood panel door with a half-light, flanked by sidelights. The entrance is sheltered under a second-story, flat-roofed sleeping porch which is supported by square wood posts. Three adjacent wood windows are on the primary façade and side elevations of the porch. The home is supported by a granite foundation. The house is eligible under Criterion A for Community Development, Criterion B for its association with Moses Chandler, an early settler of Farmington, and Criterion C Architecture on the local level as an intact example of late-eighteenth to mid-nineteenth-century agricultural architecture in Farmington, Maine. Moses Chandler played a prominent role in the development of the town of Farmington in the late eighteenth to early nineteenth century. He arrived in Farmington in the winter of 1785 and established his home on the west bank of the Sandy River. He was appointed one of two tithingmen for the town at its first meeting on April 7, 1794, and this was just the first of many roles he would fill for the community (Butler 1885:43, 69). Over the years Chandler served on a committee to choose the location and plan for a town meeting house, served in a group to define the boundaries of new school districts in and around town, helped to establish and donated to the Farmington Academy (Butler 1885: 78, 93, 96-99). He also served on a board that answered to the Trustees of the Farmington Ministerial and School Funds, which administered lands that the town had set aside for religious use and schools. Chandler also served as the 1806 representative to the Massachusetts Legislature when Maine was a part of the Commonwealth of Massachusetts (Butler 1885: 138, 335). Aside from the second-story addition in the mid-nineteenth-century, there appears to have been minimal alterations to the home. The farmhouse and connected barn appear to retain integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is c. 1790-1968.

The farmhouse **(ID-927)** located at 372 Farmington Falls Rd in Farmington, was constructed ca. 1820 to 1860, and features a rear-ell, a detached barn, and a garage on the property. The farmhouse turned business is located south of the town of Farmington and is east of the Sandy River. A sign along Farmington Falls Road indicates that the house has functioned as a business, Good Times Unlimited RV Sales & Service, since 1978. The northernmost rear-ell was constructed between 1980 per the county tax assessor data and coincides with the conversion of the farmstead to a commercial property (John E. O'Donnell & Associates, Inc 2018). The residence is eligible for listing in the National Register under Criterion A in the area of

Community Development for its evolution from its original function as a farmhouse to that of one used for modern commercial use, and Criterion C Architecture as an intact example of a circa 1830s side hall connected farmhouse. The connected farmhouse is an architectural form distinct to New England that relied on the connection of a larger house, a small house, and agricultural barns through direct additions and a series of ells. The continuous form represented both a practical use for protection from the elements, as well a symbolic function of the progression of agricultural improvement (Hubka 1984).

Located on the north side of Farmington Falls Road, the one-and-a-half story Greek Revival-influenced farmhouse has an irregular plan and three bays on its primary, south-facing façade. The steeply pitched front gable roof is clad in metal and has moderate overhanging enclosed eaves with cornice returns on the primary façade; the rear-ell does not appear to have cornice returns present, only simple overhanging enclosed eaves. The front section of the residence has a higher roofline than the section behind it and the rear-ell. There are three interior square brick chimneys present on the structure; the chimney in the main portion of the house is centered on the ridge-line, the second is on the ridgeline and centered between the first and second of the single dormers, while the third is on the slope of the west elevation between the second and third single dormers. There is a single flat-roof dormer near the back of the front section of the house on the west elevation, with what appears to be a slider unit. On the central section, there are three flat roof dormers with single window units on the east elevation, and a longer flat roof dormer on the west elevation with two paired window units. There are two small, one-story low profile shed roof additions on the west elevation of the main portion of the house. There is also a very low pitch hipped roof sleeping room on the east elevation of the main portion of the house. The exterior of the house is clad in a combination of asbestos and aluminum/vinyl siding on various sections of the house. Very little of the foundation is visible, but what can be seen indicates that it may be supported by a granite foundation. On the primary façade, the front entrance is a wood panel door with a simple entablature and abbreviated lights consisting of divided pane sidelights. There is no porch or roof sheltering the entrance, just a simple granite slab stoop. All four windows on the primary façade have decorative crowns that flare slightly outward. There appears to be a variety of windows present: two-over-two, wood double-hung sash units on the first floor of the primary façade; both single and paired one-over-one, vinyl single-hung sash units at various locations; vinyl or aluminum slider units; and fixed wood units, or “cottage windows” with a ribbon of five small divided panes above two larger vertically oriented panes. The fixed units are located on the sleeping room and are paired, with each set separated by square classical columns; the exception are two single units with a ribbon of three small panes over a single vertical pane that flank the side entrance, which is obscured by vegetation. These windows span approximately the upper three-fourths of the sleeping room walls, with horizontal wood panels underneath. The sleeping room is elevated approximately one to two feet, with lattice obscuring the material type of the piers. A second side entrance is on the east elevation of the central portion of the house and is sheltered under a simple triangular pediment. A third entrance is on the east elevation of the rear-ell addition, but the type of door is unknown. A fourth entrance, a modern glass sliding door, is present on the western elevation between the two shed roof additions. Although the house’s integrity of materials has been diminished by various changes

through the years, and the addition of the rear-ell in the late twentieth-century changed the design, the farmhouse still retains its overall integrity of location, setting, workmanship, feeling, and association. The proposed period of significance is c. 1820-1968.

The **Farmington Fairgrounds (ID-948)** are located at 292 High Street in the town of Farmington, in the southern portion of town. The fairgrounds are associated with the Franklin County Agricultural Society, which was established through a charter granted by the Legislature in 1840. The bylaws for the society were adopted at their first meeting in May 1840, and the organization became effective on June 10, 1840. Early on, the society had the support of not only the farmers, but the local residents as well. The first cattle show and fair were held in October 1840 at the Center Village, and the fairs have been held ever since (Butler 1885:181). The current fairgrounds and several structures are visible as early as 1924 on available topographic maps. Within the APE, there are two historic age structures along the fairground's western boundary with High Street, both of which are present on 1924 topographic imagery. These are the grandstand, and a large outbuilding. Several other stables, a tower, and small outbuildings are present, but are not visible on the 1965 aerial imagery nor the 1972 topographic map. The grandstand is approximately three stories tall, with a low pitch side gable roof clad in metal. The gable ends are clad in clapboard siding. The roof is supported by square wood posts with square wood brackets at the top that extend to the left, right, and towards the interior of the roof. The ends of the grandstands are also clad in clapboard siding, while the rear, or west elevation, is clad in wooden shingle siding. Eight doors are present on the grandstand; some are solid wood doors or modern panel doors, but most are vertical wood doors. There are also 18 window openings, but these are covered with full length vertical wood shutters that open in one direction. There are two small horizontal fixed wood windows with three divided panes on the west elevation towards the southern end. There is a small one-room low pitch shed roof addition on the west elevation as well as one on the southern elevation. Both have metal roofs and wide clapboard siding. The eastern elevation, which faces the racetrack, has five seating sections. An announcement room is situated in the center, and is directly above the roof, extending out over the seating. The foundation of the grandstand could not be discerned from the public right of way. A large rectangular building is immediately south of the grandstands. It has a steep pitch side gable roof clad in metal with a steeply pitched overhang that was added to the east elevation. The overhand is supported by square posts, material unknown. The entire building appears to be clad in drop wood siding. There are several window openings on the structure; most have been filled in with wood, but three still retain their original fixed wood windows with six-panes. Five doors are visible and appear to be either vertical wood or solid wood units. The foundation of the building is unknown. The Farmington Fairgrounds are eligible for the National Register under Criterion A in the areas of Community Development, Social History, and Entertainment/Recreation, and Criterion C in the area of Design/Construction. With small exceptions, these two structures appear to be minimally altered, and retain integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is 1840-1968.

Appendix Map Number 21a

The farmstead (**ID-1520**) located at 293 Farmington Falls Rd in Farmington, on the southern outskirts of the town of Farmington, is part of Sandy River Farms, a local agricultural business established in 1961 that is composed of fifteen individual farms (Sandy River Farms 2018). Several modern structures are present on the farmstead: six silos, one pole barn, and two mobile home units. The historic structures on the complex are the mid-nineteenth century farmhouse (**ID-918**), a late-nineteenth century detached hay barn (**ID-920**), a mid-twentieth century detached mixed-use barn (**ID-921**), and an early twentieth-century dairy barn (**ID-922**). The a one-and-a-half story vernacular farmhouse with Greek Revival elements, constructed ca. 1840 to 1860, has an irregular plan with a side-ell that serves as the southeast-facing primary elevation with five bays. The building's front-gable roof has a moderate pitch and is clad in asphalt shingles, with slightly overhanging enclosed eaves with cornice returns. A single pediment dormer is centered on the northeast elevation. In addition to an enclosed sleeping porch on the east corner of the house, there is also as shed roof addition on the southwest elevation. Two brick chimneys are present: the first is on the south slope of the primary façade side-ell, while the second is on the ridgeline of the rear section of the house. The primary façade is clad with clapboard siding, while the front-gable portion of the east elevation and the entirety of the north elevation are clad in wide aluminum or vinyl siding. The residence has a granite foundation. On the primary façade, a series of wood steps with a simple wood banister lead up to the home's main entrance, a partially-glazed wood panel door slightly obscured by a storm or screen door, which opens into the enclosed sleeping porch. On the first and second stories of the front-gables of the home are single or paired two-over-two, wood double-hung sash units with simple, rectangular entablatures. A series of closely placed two-over-one, wood double-hung sash units are on the exterior of the sleeping porch and wrap around the side of the southeast elevation onto the northeast elevation. The windows span the upper three-fourths of the sleeping porch's walls with horizontal wood paneling underneath. The sleeping porch is elevated approximately two feet, with lattice obscuring the material type of the piers. Windows on the northwest elevation consist of another two-over-two wood double-hung sash unit with a simple rectangular entablature, two pairs of wooden casement windows with horizontal muntins, and two small fixed single pane wood windows just under the roofline. A secondary entrance is on the northwest elevation of the shed addition, a simple unglazed wood panel door, along with a single two-over-two wood double-hung sash unit. The hay barn, mixed-use barn, and the dairy barn are all located southeast of the farmhouse. All three outbuildings are clad in clapboard siding and appear to have minimal alterations. The hay barn has a gable front roof clad in metal with cornice returns, an offset brick chimney on the ridgeline, and a parged foundation. The mix-use barn has an arched-roof clad in metal, with parged walls up to the beginning of the roof and the clapboard siding above, on the arch ends. It has a concrete foundation. The dairy barn also has a moderate pitch front gable roof clad in metal with a concrete block foundation. The farmstead is eligible under Criterion A in the area of Agriculture/Farming and retains its historic landscape with its pastures behind it to the west, and Criterion C for Architecture as an intact example of mid-nineteenth to mid-twentieth century agricultural architecture in Farmington, Maine. The buildings appear to be minimally altered, and retain integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is 1840-1968.

Appendix Map Number 21b

The farmstead (**ID-1524**), located at 414 Farmington Falls Road, is likely eligible for listing in the National Register under Criterion A in the area of Agriculture/Farming and Criterion C for Architecture as an intact local example of a connected early nineteenth-century farmstead. Constructed between 1830 and 1900, the connected farmhouse is an architectural form distinct to New England that relied on the connection of a larger house, a small house, and agricultural barns through direct additions and a series of ells. The continuous form represented a practical use for protection from the elements, as well a symbolic function of the progression of agricultural improvement (Hubka 1984). Positioned on the northeast side of Farmington Falls Road, the current configuration consists of a one-and-one-half-story house (**ID-931**) connected to a one-story house to the northeast façade, both constructed in a local wood-framed vernacular tradition. A storage barn and a dairy barn (**ID-932 and ID-919**) are connected to the northeastern façade of the smaller house, completing the connected complex. An unattached vernacular residence is located to the north (**ID-930**). The farmstead retains its historic agriculture landscape, including open pastureland to the northeast of the connected structure. Minor material alterations to the connected residential structure and barn complex include replacement roofing and windows. However, the farmstead retains a high degree of architectural integrity and spatial arrangement, including its agricultural setting with intact pastureland, as well as the setting of the connected structure closer to the road edge, as would have been common with this type of building construction (Hubka 1984). The property retains integrity of setting, location, design, feeling, and association, and is an example of a local resource useful for interpreting the development of agrarian society in New England. The proposed period of significance is 1830-1968.

Appendix Map Number 22

Two-story bank barn (ID-874) at 348 McCrillis Corner Rd in Wilton is recommended eligible for NRHP listing under Criterion A for Agriculture, Settlement/Development and under Criterion C for Architecture as a representative local example of a late-nineteenth century bank barn. The bank barn has a front gable roof clad in metal roof, concrete foundation, and corrugated metal siding over clapboards. The barn is two bays wide by seven bays long with a one-story ell addition on a concrete block foundation. Windows throughout have rectangular openings, with six-light hopper window on upper story and a mix of multi-light sliding windows and fixed windows on the first story. The roof has a small cupola with wood louvers and a wood shingled pyramidal roof topped with small weather vane. The barn retains high integrity in all aspects and is able to convey its significance under Criteria A and C. The proposed period of significance is the late nineteenth century through 1968.

Appendix Map Number 23

The **residence (ID-870)** at 481 McCrillis Corner Road in Wilton is recommended eligible for NRHP listing under Criterion A for Community Development, and Criterion C for Architecture as a significant local example of Greek Revival-inspired vernacular architecture in Wilton. Constructed circa 1840-1880, the residence has a northeast facing original block with a front gable roof and two rear ell additions. The main block has a side hall plan with a primary entrance offset to the north side of the primary façade. The entrance has sidelights and a

transom and is slightly recessed from the main façade. The entryway is surrounded by stylized pilasters and an entablature with dentils. The corners of the façade are marked by stylized pilasters. Windows throughout the main block have simplified, Greek Revival-inspired wood surrounds. The windows throughout the main block appear to be replacement vinyl windows with four-light, wood frame storm windows. The main block has a central interior chimney on the southeast roof slope and a shed roof dormer on the northwest facing slope. The first rear addition is also one-and-a-half stories but with a reduced roof height. The addition has an interior chimney centered on the ridge of the addition. On the southeast facing roof slope are two gable roof dormers. The second rear addition is one-story and appears to have minimal fenestration. A door is located on the northwest façade. The foundations of former outbuildings, most notably two to three large barns, are discernable on aerial photographs. The replacement of original windows with vinyl windows has impacted the property's integrity of materials, design, and workmanship. However, the retention of other stylistic details and features somewhat mitigates that impact. The property retains integrity of location, but its integrity of setting and feeling have been impacted by the demolition of outbuildings historically associated with the residence. Overall, the property retains sufficient integrity to convey its significance as a local example of a Greek Revival-inspired vernacular style house. The proposed period of significance is 1840-1968.

Appendix Map Number 25

The **connected farmhouse (ID-846, ID-847)** at 104 Belanger Road in Jay, Franklin County is recommended eligible for NRHP listing for significance under Criterion C Architecture as an example of a late nineteenth century vernacular connected farmhouse. Constructed circa 1860-1880, the residence (**ID-846**) is two stories with a rectangular plan and the primary façade faces south. The design of the original block has stylistic features of several mid- to late nineteenth century revival styles, including a jerkinhead roof, bay windows flanking the primary entrance, paired windows, a wide entablature along the eaves, and classically-inspired window and door surrounds. The residence is clad in weatherboard and the roof is clad in asphalt shingles. The connecting addition extends to the west from the original block to the barn and is one-and-a-half stories. The south façade of the addition has a full-width porch on the first story and two shed wall dormers on the upper half story. The connected barn (**ID-847**) is one-and-a-half stories with a rectangular plan. The stylistic features of the main block carry through from the residence to the barn, a character-defining feature of the connected farmhouse. The barn also has a jerkinhead roof and classically-inspired window and door surrounds. Overall, the property retains sufficient integrity to convey its architectural significance. The integrity of materials, location, feeling, setting, and association all remain high. The main alteration to the residence is the addition in the early 2000s of the front porch on the connecting addition. This change has impacted the property's integrity of design and workmanship, but not sufficiently to render it unable to convey its significance. The proposed period of significance is 1860-1968.

Appendix Map Number 26b

The **farmstead (ID-1565)**, at 65 E Jay Road in Jay, was constructed between 1861 and 1880, as the farmstead does not appear on an 1861 map of Franklin County (Walling 1861). The farmstead is significant under Criterion A for Agriculture and Settlement as a representative

example of a late nineteenth century dairy farm in Franklin County, and its contributions toward establishing and developing the community over time; and under Criterion C for Architecture. The property includes a farmhouse (**ID-840**), a dairy barn (**ID-841**), and a barn (**ID-842**) all constructed circa 1861-1880, and a 1960s utility shed (**ID-843**). The residence (**ID-840**) has a rectangular, one-and-a-half story main block with a side gable roof and two rear ell additions. The west-facing primary façade is mostly obscured by a three-quarter width shed roof enclosed porch. The main block is clad in weatherboard siding and the roof is clad in standing seam metal. Two interior chimneys are on either end, just below the ridge. The larger rear addition is two-story and connects to the main block with a cross gable roof. The fenestration of the rear addition includes three windows on the second-story of the west façade above a single door entrance sheltered by a shed roof porch. The second rear addition is a one-story with gable roof extending north from the first addition. The second rear addition was not visible from the right-of-way. The dairy barn (**ID-841**) is approximately 200 feet northeast of the rear of the residence. It has a rectangular plan, one-and-a-half stories, and a front gable roof. There is a small gable roof equipment shed on the south corner of the west façade. The barn is clad in wood shingles and has a corrugated metal roof. Along the west façade are six 6-light windows. The north, south, and east facades are not visible from the right-of-way. The second barn (**ID-842**) is approximately 75 feet north of the residence. It has a rectangular plan, is two-stories, and a front gable roof. It is clad in wood shingles and has a standing seam metal roof. The west facing façade has a ground-level entrance that is not visible from the right-of-way and three windows in the gable end. Openings on the north façade have mostly been covered over with plywood. A circa 1960s equipment shed (**ID-843**) is off the northwest corner of the barn and appears to be attached based on aerial photography. It is likewise clad in wood shingles, but has a corrugated metal roof and a single window in the west gable end. The residence and barns are minimally altered, except for the enclosed porch added at an unknown date and the rear additions to the residence, all of which are more than 50 years old. Accordingly, the integrity of materials, design, and workmanship all remain high. The setting and feeling have been slightly impacted by the addition to the historic layout of the circa 1960s equipment shed. Overall, the property retains sufficient significance to convey its significance under Criterion A and is therefore recommended eligible for NRHP listing. The proposed period of significance is the mid nineteenth century through 1968.

Appendix Map Number 27

The **farmstead (ID-1604) located at 50 Jones Road** in Livermore Falls is composed of a mid- to late nineteenth farmhouse (**ID-807**), a late nineteenth to early twentieth century connected vernacular hay barn (**ID-808**), and a late nineteenth to early twentieth century detached barn that has partially collapsed (**ID-809**). The farmstead is recommended eligible for listing in the National Register under Criterion A for associations with Agriculture and Settlement/Development and under Criterion C for Architecture as a representative example of a mid- to late-nineteenth century connected farmhouse. The two-and-a-half story vernacular farmhouse with Greek Revival elements, constructed between 1860 and 1900, has an irregular plan with a one-and-a-half story rear-ell, and a south-facing primary façade with five bays. On the primary façade, the frieze and architrave are very wide and prominent, and at each corner of the home and rear-ell is woodwork that mimics square vernacular Doric columns; this detail

is also present on the connected barn, a character-defining feature of the New England connected farmhouse. Two interior brick chimneys are present on the main house. These are located on the front slope of the roof and divide the roof visually into thirds. A third interior brick chimney with a metal liner and cap is located on the western side of the rear-ell's roof. The exterior of the home is clad in clapboard siding, and the residence has a concrete foundation with a cellar. On the primary façade, a set of simple concrete steps lead up to the front door, which is obscured by a wood screen door. The entrance is sheltered by a simple flat roof wood awning that is supported by plain angled wood braces and decorative brackets. All of the windows are the original wood units. A single two-over-two double-hung sash window is directly above the main entrance. Both the second story centered window and entrance are flanked by paired narrow one-over-one double-hung sash windows. The windows on the west and north elevations of the main house are two-over-two double-hung sash windows, as are the first-floor windows on the west elevation of the rear-ell. The second story windows on the rear-ell are small, square three-over-three double-hung sash units with vertical muntins. A secondary entrance, a vertical board wood door, is on the western elevation of the rear-ell. The window units on the primary façade and western elevation all have simple rectangular entablatures, as well as the secondary entrance on the rear-ell; the other windows all have simple trim. Both the one-story backhouse and the two-and-a-half story mixed-use hay barn, constructed between 1890 and 1930, have moderately pitched roofs clad in metal, and as previously mentioned, the barn has cornice returns and the faux-Doric columns at the corners of the structure on its primary elevation. The exterior walls of both structures are clad in clapboard siding, and they are built of stud construction with obscured foundations. Visible windows on the barn and rear elevation of the back house are two-over-two double-hung sash units. The primary façade of the back house is open, while a barn door with diagonal boards is on the first floor of the barn, with a set of simple vertical board doors on the second story. The detached vernacular barn is just east of the farmhouse and connected barn and was also constructed between 1890 and 1930. The barn is partially collapsed. It has a steeply pitched side gable metal roof and appears to have vertical wood boards on the gable end elevations and wood shingle siding on at least the south elevation. Like the connected barn, its frame is stud construction and the foundation type is unknown.

The connected farmhouse is an architectural form distinct to New England that relied on the connection of a larger house, a small house, and agricultural barns through direct additions and a series of ells. The continuous form represented both a practical use for protection from the elements, as well a symbolic function of the progression of agricultural improvement (Hubka 1984). The farmstead retains its historic agricultural landscape as it is situated on 40 acres of land with pasture to the south and east of the complex. The property retains its integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is c. 1860-1968.

Appendix Map Number 27a

The **Souther Family Farm (ID-1515)** is located on the western side of Souther Road, approximately 0.3 miles north of its intersection with Fayette Road. The farmstead includes a farmhouse (**ID-788**) and six detached barns (**ID-789 to ID-794**). The farmstead is recommended

eligible for listing in the NRHP under Criterion A in the area of Agriculture/Farming and Criterion C Architecture as an intact local example of a mid-nineteenth century farmstead. The one-and-a-half story vernacular farmhouse, constructed between 1860 and 1870, has a hall and parlor plan with a series of two staggered side-ells. The east-facing primary façade features five bays on the main house and a total of five bays on the side-ells. The entire residence has a moderately pitched side-gable roof with shallow projecting eaves; the main portion of the home and the first side-ell roofs are clad in metal, while the north side-ell's roof is clad in asphalt shingles. The is a two-bay dormer with a shed roof directly above the main entrance to the home. Three interior brick chimneys are visible; two are on the front slope of the main house roof at either end, while the third is centered on the front slope of the first side-ell's roof just off the ridgeline. The exterior walls of the main house and the small shed roof addition on its north elevation in front of the first side-ell are clad in aluminum or vinyl siding; both side-ells are clad in shingle siding. The window units are one-over-one double-hung wood sash units except for the two windows in the dormer and a single fixed six-pane wood unit with functioning shutters on the northernmost side-ell. The dormer windows are six-over-six window units, but the material and sash type cannot be determined due to dark window screens. Non-functional decorative shutters flank most of the window units. The home does not have a porch, just a simple stoop in front of the main entrance. The front door is a modern panel door with two vertical lights flanked by two sidelights that mirror the door. The northernmost side-ell has a secondary entrance, obscured due to vegetation, and a single-car garage. The foundation type cannot be determined from the public right-of-way. A mixed-use vernacular barn (**ID-789**) is directly north of the farmhouse across a gravel driveway. It has a steeply pitched side-gable roof clad in metal and has a New England Plan. The exterior walls are clad in clapboard siding. A small fixed window is on the north elevation in the gable, and there is a large sliding barn door on the primary façade facing Souther Road. Directly behind, or west, of this barn is a second mixed-use vernacular barn (**ID-790**). It has a very long rectangular New England plan, with an attached silo on the north elevation. While it is difficult to see all of the details from the public-right-of-way, it appears to have a moderately pitched metal clad roof and clapboard clad walls. Multi-pane and single pane fixed windows can be seen on the east and north elevation, as well as the hardware for a sliding barn door. A third mixed-use vernacular barn (**ID-791**), most likely originally a stable, is directly west of the farmhouse. It has a low pitch front gable roof clad in metal, with wood shingle siding. There are at least 18 bays on the south elevation, the only one visible from the road. There are five sets of fixed six-pane square wood windows adjacent to closed shutters on the western half of the elevation, and two sets of six-over-six double-hung wood sash units flanking a fixed six-pane square wood window as well as a set of paired six-over-six double-hung wood sash units on the eastern half of the elevation. The final three mixed-use vernacular barns (**ID-792 to 794**) are along a fence line, just south of the house and other three barns. All three of these barns are identical in plan, with moderately pitched front gable roofs and wide overhanging eaves. The northern halves of the barns are slightly longer than the southern halves, giving their northern elevations staggered appearances. The two barns to the east have new metal roofs, while the westernmost barn still retains an older metal roof. The eastern-most barn has been updated with a fresh coat paint, or recommended new siding, and has slightly a different fenestration pattern with no windows on the east elevation, and only two doors and a single window on the north elevation. The center

barn has three wood windows on the east elevation, two doors on the north elevation, and a single six-over-six double-hug wood sash window on the east elevation of the staggered section of the barn. Although it is not clear due to the distance from the road, the west barn's fenestration pattern appears to mirror that of the center one. All of the barns were constructed between 1870 to 1880 and are one-story in height.

The farmstead retains its historic agricultural landscape, surrounded by pastureland in all directions. Material alterations to the farmhouse includes replacement roofing, new siding on the main house, a new front door, and decorative shutters, but the rest of the farm seems relatively unaltered with the exception of one of the barns. These alterations have impacted the farmstead's integrity of materials and workmanship, but design, setting, and feeling all remain high as the spatial arrangement of buildings relative to one another is unchanged, as is the close proximity to the road, as was common with this type of building construction (Hubka 1984). It also retains integrity of location and association and overall retains sufficient integrity to convey its significance under Criteria A and C. The proposed period of significance is c. 1860-1968.

Appendix Map Number 28

The **residence at 810 Park Street (ID-738)** in Livermore Falls is a late-nineteenth to early-twentieth century Queen Anne with Free Classic detailing and is recommended eligible for listing in the NRHP under Criterion C Architecture at the local level as an excellent example of the Queen Anne Style in Livermore Falls. The two-and-a-half story home has a west-facing primary façade that features five bays and has an irregular plan with a one-story rear-ell. It has a steeply pitched hipped roof with a slightly lower front facing cross gable, while the rear-ell has a moderately pitched front gable roof. Both roofs are clad in asphalt shingles and have slightly overhanging enclosed eaves. Directly below the roofline, the cornice is lined with dentils before the transition to the frieze and architrave. There is a single brick chimney offset on the front slope of the roof, near the intersection of the main roof and the front facing cross gable roof. The front gable projects out beyond the elevation and is enclosed by a pent roof with wood shingles; there is a small rectangular fixed window with stained glass detailing and decorative diagonal woodwork within the gable itself. This diagonal woodwork is mirrored on the front gable's first floor bay window, and possibly the projecting bay window on the south elevation. A band of decorative trim defines the break between the first and second floor on the front gable's primary elevation. The exterior walls are clad in clapboard siding. All windows on the house are wood. Those on the main portion of the home have rectangular entablatures as well as the front door; the single visible window and vertical board door on the west elevation do not. Most of the windows are two-over-two, double-hung sash units. Two double-hung sash windows on the west elevation have a narrow six-pane upper sash over a taller two-pane lower sash with a vertical muntin, two windows on the first floor of the façade under the porch roof have top double-hung wood sashes with divided rectangular panes around a centered square pane over a single-pane bottom sash, and the windows on the front gable projection including the bay window and the second bay window on the east elevation all have slightly narrower one-over-one double-hung sash units. Most of the two-over-two and one-over-one windows have original wood frame storm windows mirroring their pane divisions. The primary elevation

has a partial width, engaged porch with a low pitch roof. The roof is supported by three turned wood columns that sit on a wood deck supported by a granite foundation, as does the rest of the house. Two granite steps lead up to the porch. The porch features a spindlework frieze, and the front entrance is comprised of a set of narrow outward swinging unglazed vertical board doors. The house The property retains a high degree of its integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is the late nineteenth century through 1968.

Appendix Map Number 28b

Haines Corner Cemetery (ID-736) located on Park Street/Rte. 133 in Livermore Falls approximately 150 feet north of Haines Corner Road. Recommended eligible for NRHP listing under Criteria A: Settlement Patterns; and C: Design. Established circa 1830s, Haines Corner Cemetery is enclosed along the east side (Park Street) by a fieldstone wall topped with a wrought iron fence and by woods along the west and north sides. The cemetery retains most aspects of integrity and its rural setting. **Haines Corner Cemetery (ID-736)** may be historically significant for its association with the early settlement of Livermore Falls. The proposed period of significance is c. 1830s-1968.

Appendix Map Number 30

The residence at **197 Campbell Road (ID-686)** is a one-and-a-half story cape-shaped plan with a rear addition set on a continuous granite foundation. The structure is five bays wide and is clad with brick. The side-gable roof is clad with metal roofing and features an interior brick chimney that rises through the center of gable. Constructed in the late nineteenth/early twentieth century, structure is clad in vertical wood and features a gambrel roof with replacement metal siding. Six-over-six single-hung wood sash windows are balanced within the bays on the primary (west) façade. The entry way features a slightly, recessed paneled wooden door with some elements of mid-nineteenth century Greek Revival detailing. The resource is recommended eligible Criterion C in the area of architecture an intact local example of cape-style construction and Greek Revival detailing. During the further intensive survey, no additional information was located in identifying the resources as prevalent in the development of the local area and therefore it is not recommended eligible under Criterion A. The residence is recommended NRHP eligible for architecture, and the suggested period of significance is the mid-nineteenth century through 1968.

The residence (**ID-692**) and the barn (**ID-693**) located at 19 Dawns Way at its intersection with State Road 106 are part of an unnamed farming complex that contains four additional non-historic structure located to the east. The single-family residential structure (**ID-692**) is constructed in the vernacular tradition and is two-and-a-half stories and five bays wide by two bays deep. The side-gable roof is clad with metal roofing and features two interior-end chimneys located at the extremes of the north and south of the gable ridgeline. Constructed in the late nineteenth/early twentieth century, structure is clad with replacement vinyl siding and features replacement metal-sash, one-over-one-single hung windows. The windows are balanced within the bays on the primary (west) façade and the entry way features a paneled wooden door. The barn (**ID-693**) is located to the south of the residential structure across the

adjacent driveway. Also, constructed in the vernacular traditions, the one-story detached barn is rectangular in plan and set on concrete foundation. The exterior of the building is clad with wood siding, while the gable roof is cover with metal sheathing. The barn appears to be also used a storage garage and two roll-up garage door punctuate the northern façade, providing access to the structure.

The farmstead retains its historic agriculture landscape including open pastureland to the south and west of the primary structure. Minor material alterations to the residential structure and barn include replacement roofing and windows. However, the farmstead retains a high degree of architectural integrity and spatial arrangement including its agricultural setting with intact pasture land as well as the setting of the structure itself (Hubka 1984). The property retains integrity of setting, location, design, feeling, and association and is an example of a local resource useful for interpreting the development of agrarian society in New England and is therefore recommended eligible for listing in the National Register under Criterion A Agriculture/Farming for its association with farming in the nineteenth and twentieth centuries. The proposed period of significance is the late nineteenth century through 1968.

The farmhouse (ID-704) and barn (ID-705) at 201 Strickland Loop Road in Livermore Falls, is immediately west of Scott Brook, a tributary of the Androscoggin River which is approximately 550 feet north. There are remnants of a mill on Scott Brook just northeast of the house. The buildings are recommended eligible for listing in the NRHP under Criterion A in the area of Industry at the local level and under Criterion C for Architecture as an example of a late-nineteenth to early-twentieth century residence and barn complex. According to a biographical sketch, Lieutenant Samuel Benjamin bought land on the east side of the Androscoggin River in the late 1700ss, and in 1811 built a saw mill on a brook just north of Strickland's Ferry, which later became known as Norris' Mill. In the 1890 Annual Register of Maine, a T.D. Norris of Livermore Falls is noted as a manufacturer of lumber. The bridge crossing Scott Brook just south of the former mill is named Norris Bridge, so it is likely this was a saw mill operated by T.D. Norris. The house and barn were constructed between 1890 and 1900. The house was originally at-grade and connected to the barn with a side-ell per available street imagery. At the time of the field survey, the house had been carefully detached from the side-ell and moved in front of it and the barn to rest on cribbing. A basement has been dug slightly north of the original site of the house; concrete walls show that the house will be elevated two to three feet above its original at-grade elevation once it is moved onto the new foundation. The two-and-a-half story vernacular farmhouse has an unknown interior plan and has three bays on its primary, south facing façade. The building's steeply pitched side gable roof has moderately extended enclosed eaves with return cornices and is clad in asphalt shingles. The brick chimney was removed prior to moving the house, but street view imagery shows that it is on the rear slope of the house, offset from the ridgeline towards the north end of the house. A second brick chimney is centered on the ridgeline of the side-ell. The exterior walls of the house and side-ell are clad in clapboard siding. The windows are all wood units; most are two-over-two double hung sash units, either single or paired. There is also a pair of six-over-six double-hung sash units on the second floor of the east façade, as well as a diamond-shaped stained-glass window on the second story centered over the main entrance. The full-width attached front

porch was removed prior to the house's relocation; it had a low pitch roof supported by turned wood columns that rested on a concrete foundation. The main door to the home is a partially glazed wood panel door. The entrance to the side-ell is open on the street imagery and cannot be seen. The barn is a mixed-use dairy barn with a New England plan and was originally in line with the side-ell. It has a steeply pitched front gable roof that is clad in asphalt shingles; the walls are clad in clapboard siding on the primary façade and south elevation, and shingle siding is present on the north elevation. The foundation is obscured and cannot be seen. The primary façade of the barn is currently behind the relocated farmhouse, but street imagery shows that it had two small fixed diamond windows in an inset entrance beside the side-ell, as well as two-over-two double hung sash units. A series of small fixed single pane windows are on the south elevation along with an open entrance on the second story and a vertical board wood door on the first. The property retains its historic location beside Scott Brook, with pasture to its east across Strickland Loop Road. As of the field survey, material alterations had been minimal and the house and barn retain a high degree of architectural integrity and spatial arrangement, including the close proximity to the road, as was common with this type of building construction (Hubka 1984). While the basement addition and raising of the home will change the vertical design of the home, and it will most likely not be reconnected to the side-ell and barn, it retains integrity of location, setting, materials, workmanship, feeling, and association, and is an excellent example of a local resource useful for interpreting the early mill industry of the East Livermore area.

Appendix Map Number 30a

The Barker Farm (**ID-1516**) located on Barker Road in the town in Leeds is recommended eligible for listing in the National Register of Historic Places under Criterion A in the area of Agriculture/Farming. Positioned on the both the north and south sides of Barker Road and to the east of State Road 106, the farmstead complex is comprised of a detached, mixed-use barn (**ID-694**), a utility building (**ID-695**), a cowshed (**ID-696**), and two dairy barns (**ID-697** and **ID-698**). Several other non-historic age outbuildings and barns to the south and west are part of the complex as well. A non-historic residential building is located to the west closer to State Road 106 and along the south side of Barker Road. The mixed-use barn (**ID-694**) is located on the south side of Barker Road and was constructed between 1940 and 1960. The one-and-a-half-story barn features a front gable roof clad in metal. The structure is wood-framed and set atop a concrete foundation. The exterior is clad in clapboard siding and shed roof additions are attached to both the north and the south facades of the primary structure. Nine-over-nine, double hung, wood frame windows punctuate the west and east façades and the gable-roof dormer on the north façade. A roll-up garage door provided access along the south façade. Located to the southwest is utility building (**ID-695**). It has a front-gable roof clad in metal and features an interior set brick chimney that rises through the southern portion of the roof line. The building is rectangular in plan and foundation is obscured, but it is likely a poured concrete foundation. The exterior walls are clad in vertical wood siding and one-over-one single-hung, metal sash window, several fixed light windows, and two metal awning windows punctuate the façades. Shed roof additions are attached to the east and west facades. Located to the east of **ID-695** and to the south of **ID-694**, is a cowshed (**ID-696**). Constructed in the vernacular tradition, the cowshed is a single-story detached structure. The building features a side-gable

roof clad in metal. The building is generally rectangular in plan and the foundation material is obscured due to vegetation growth. The exterior is clad in vertical wood siding and there are no visible windows. However, a sliding barn door is located along the west façade which provides access to the structure. A dairy barn (ID-697) is located to the south of the cowshed. The dairy barn (ID-697) was constructed in the vernacular tradition and is a single-story detached structure. The building features a side-gable roof clad in metal. The building is generally rectangular in plan and the foundation material is obscured due to vegetation growth. The exterior is clad in vertical wood siding and there are no visible windows. However, a sliding barn door is located along the west façade which provides access to the structure. Two additions are attached to the east façade of the structure, elongating the rectangular plan of the entire building. Lastly, an additional dairy barn (ID-698) is located along the north side of Barker Road and fronts the other agricultural buildings associated with the property. The dairy barn is one-and-a-half-stories and is constructed in the vernacular tradition. The barn features a front-gable roof and is clad in metal sheathing. The building is a T-shaped plan with an addition to the south façade that appears to serve as office space, while the remainder of the building functions as a dairy barn. The primary barn is clad in vertical wood siding and is set on an obscured foundation which is likely poured concrete. Fixed-light windows punctuate the three bays of the southernmost portion of the building, while traditional agricultural open-air bays dominate the northern portion of building. A sliding barn door provided access to the dairy area via the south façade. The office addition to the south façade is a side-gabled structure, clad in vinyl siding, and set on a continued concrete block foundation. An interior brick chimney rises through the metal-covered roof and metal, sliding windows punctuate the facades.

The farmstead retains its historic agricultural landscape including open pastureland to the north and south of the structures. Minor material alterations to the agricultural structures include replacement roofing and windows in some of the structures. These alterations have impacted the integrity of materials and workmanship on the main residence but the spatial arrangement relative to one another is unchanged, as is the close proximity to the road, as was common with this type of agricultural building construction and layout (Hubka, 1984). The property retains integrity of setting, location, design, feeling, and association and is an example of a local resource useful for interpreting the development of agrarian society in New England. The proposed period of significance is c. 1940-1968.

The Maine Central Railroad – Rumford Branch (ID-699) segment MP 0 to MP 20.1 in Leeds near Route 106 and Barker Road, is adjacent to the project area north of the town. This line of the Maine Central Railroad (MEC) is now identified as the Rumford Branch, and covers 47.2 miles with mileposts at Leeds Junction (0), Leeds Center (7.3), Livermore Falls (20.1), Riley's (24.8), Canton (31.1), Rumford (47.2). A point observation was previously surveyed and evaluated. The earlier evaluation point was at Milepost (MP) 26.1 in East Livermore. The segment ID-699 has not been previously recorded and runs from Leeds Junction to Livermore Falls, which is 20.1 miles of the Rumford Branch's 47.2 mile length. This route includes the previously recorded observation point located at East Livermore, MP 26.1 (ID-715/MHPC #249-0045) [Note: MP 26.1 was the marker on the old Farmington Branch, East Livermore is not identified with an MP on its current Rumford Branch]. This segment is within ½ mile of the

project area over much of its length, and includes an area where the line is within 45-feet of the project area and an area where it crosses directly through the project area. The segment beginning and end points are representative of the first phase of construction on the Androscoggin Railroad, which later became part of the MEC. The Androscoggin Railroad was chartered in 1848 and segment **ID-699** from Leeds Junction to Livermore Falls was completed in 1852. Construction continued and connected to Farmington in 1859. It was later extended south to Brunswick to connect with the Kennebec and Portland Railroad in 1861. The line was originally Portland gauge, but was converted to standard gauge in 1861 when it made its connection with the Kennebec and Portland. The MEC leased the line from the Androscoggin Railroad beginning in 1871. The line later became known as the Farmington Branch and connected Crowley's Junction to Farmington, covering a distance of 47.8 miles. The Rumford Branch is now operated by Pan Am Railways. The section south of Leeds Junction to Crowley's Junction was removed in 1938, and the section from Livermore Falls to Farmington is not part of the operation of the current Rumford Line. The railroad is significant under Criterion A for Transportation as it represents a significant early transportation route in southern Maine. The railways primarily transported agricultural and timber, but also provided passenger service. Although the crossing and tracks have likely undergone maintenance and upgrades over the years, the Maine Central Railroad – Rumford Branch MP-0 to MP 20.1 (**ID-699**) retains integrity of design, feeling, association, and location. It is eligible under Criterion A Transportation, for its association with the railroad and developing economy in Maine in the late nineteenth through mid-twentieth centuries. Due to its continuous use, its period of significance is 1852-1968.

Appendix Map Number 31

The unnamed farmstead (**ID-1514**) located at 129 Fish Street in Leeds is recommended eligible for listing in the National Register of Historic Places under Criterion A for Agriculture/Farming and Criterion C for Architecture as a good example of a Federal Style influenced residence. Positioned on the western side of Fish Street, the farmstead includes a single-family residence (**ID-665**) and a detached dairy barn (**ID-666**). The two-story vernacular farmhouse (**ID-665**), constructed between 1780 and 1820, has a central hall plan, with a rear addition. The residence has a moderately pitched side-gable roof with shallow projecting eaves; the main portion of the home and the rear-ell roofs are clad in asphalt shingles. Two interior brick chimneys are visible, centered on the roof ridge inset from the gable ends of the roof. The exterior walls of the main house and the rear-ell are clad in clapboard siding. The symmetrical five-bay front façade and the side facades of the main house feature two-over-two double-hung wood sash windows. There are no visible windows on the rear-ell. The front door is centered in the third bay and is obscured by a modern aluminum screen door. Fixed-pane 4-lite vertical sidelights flank either side of the door surround. Above the door, a fanlight transom window with modern replacement glass exists. The front door is accessed by two concrete steps leading to a small concrete stoop. The rear-ell features a one-story porch that has been enclosed with pairs of two-over-two double-hung wood sash windows which are covered by screens. A wood door with fixed-pane divided lite window above a wood panel provides access to the enclosed porch. The main house foundation is made of granite, while the foundation of the rear-ell is obscured from view. A mixed-use vernacular barn (**ID-666**) is located to the west of the residence. It has a steeply pitched front-gable roof covered with a standing-seam metal roof and has a New

England Plan. The exterior walls are clad in wood shingles. There is a large sliding barn door on the primary façade facing Fish Street. A small fixed-pane 8-lite wood window is located on the left side of the front façade. A double-hung wood window once existed above the sliding barn door but only the single-pane bottom sash remains in place. The farmstead retains its historic agriculture landscape including open pastureland to the north and south of the structures. Minor material alterations to the residential structure include a replacement fanlight window above the door, the enclosure of the rear-ell porch, and a new roof. These alterations have impacted the integrity of materials and workmanship on the main residence but the spatial arrangement relative to one another is unchanged, as is the close proximity to the road, as was common with this type of building construction (Hubka, 1984). The property retains integrity of setting, location, design, feeling, and association and is an example of a local resource useful for interpreting the development of agrarian society in New England. The proposed period of significance is c. 1780-1968.

The detached garage (**ID-677**) is a newly recorded structure on the western side of Campbell Road, just north of the intersection of Campbell Road and Route 291 in the town of Leeds. Constructed c. 1880-1900, this garage is reported to have been constructed as a one-room school house and later converted to use as a garage and is recommended eligible for the National Register of Historic Places under Criterion A for Early Settlement and Development, and Education. The resource is one-and-a-half stories with a moderately-pitched front gable roof with shallow projecting eaves, clad with standing-seam metal. The exterior walls are clad in wood clapboard. The eastern facing front façade features a five-panel wood door with a three-lite transom window above the door in the left bay. To the right of the door, patching in the wood clapboards indicates a window once existed but has been removed and/or covered. A six-over-six double-hung wood sash window is located in the gable end but is in very poor condition. Along the south façade, three six-over-six double-hung wood sash windows are centered on the wall. A modern metal garage door has been inserted to the left of the windows. Major material alterations to the structure include the insertion of a large modern garage door and the removal or covering of historic openings. Neglect has caused many historic elements to be lost or severely deteriorated. These alterations have impacted the integrity of materials, workmanship, and feeling on the main residence and therefore, this resource is not eligible for the National Register under Criterion C for architecture. However, the property does retain integrity of setting, location, design, association and is an example of a local resource useful for interpreting the early settlement and development, and the educational systems establish, in New England. The proposed period of significance is c. 1880-1968.

Appendix Map Number 32

Fairview Farm (ID-1513) is located at 530 Fish Street (30 Grant Rd) in Leeds and includes a single-family residence (**ID-659**) and a dairy barn (**ID-660**). The farmstead located at 530 Fish Street is recommended eligible for listing in the National Register under Criterion A in the area of Agriculture/Farming. Constructed between 1820 and 1860, the connected farmstead is an architectural form distinct to New England that relied on the connection of a larger house, a small house, and agricultural barns through direct additions and a series of ells. The continuous form represented both a practical use for protection from the elements as well a symbolic

function of the progression of agricultural improvement (Hubka 1984). Positioned on the east side of Fish Street (on Grant Road), the current configuration consists of a two-and-a-half-story house (**ID-659**) connected to a one-story addition to the east facade, both constructed in a local wood-framed vernacular tradition. A storage/dairy barn is connected the east façade of the smaller house via an ell completing the connected complex. The two-and-a-half story vernacular farmhouse (**ID-659**), constructed between 1860 and 1870, features wood frame construction and is generally rectangular in plan being five bays wide on the front (western) façade by two bays deep. The building features a side-gabled roof clad in asphalt shingles and features a single interior brick chimney set on the ridge. A full-width, one-story porch is attached to the front façade and the main entry is not visible under the porch. The exterior is covered with wooden clapboard and wood-sash windows are spaced within the bays. Attached to the rear ells is the larger storage/dairy barn (**ID-660**). The barn (**ID-660**) is directly east the farmhouse and was constructed in the vernacular tradition. It has a steeply pitched side-gable roof clad in metal and the exterior walls are clad in clapboard siding. Several small, fixed windows punctuate the north and south facades and there is a large sliding barn door on the primary façade western façade.

The farmstead retains its historic agricultural landscape including open pastureland to the northeast of the connected structure. Minor material alterations to the connected residential structure and barn complex include replacement roofing and windows. However, the farmstead retains a high degree of architectural integrity and spatial arrangement including its agricultural setting with intact pasture land as well as the setting of the connected structure itself (Hubka 1984). The property retains integrity of setting, location, design, feeling, and association and is an example of a local resource useful for interpreting the development of agrarian society in New England and is therefore recommended eligible for listing in the National Register. The proposed period of significance is c. 1820-1968.

Appendix Map Number 33

The **Benjamin Allen Farmstead (ID-1511)** at 102 North Mountain Road includes a farmhouse (**ID-617**) located east of North Mountain Road, one connected barn (**ID-618**), one detached wagon shed (**ID-619**), one detached barn (**ID-620**), and one garage (**ID-621**). The farmhouse, constructed ca. 1830 to 1850, is a two-story vernacular building with five bays on its primary, northwest-facing façade. The building's side gable roof is clad with metal and features a brick chimney located centrally on the ridge. The exterior walls are clad with clapboard siding. A connected barn is located on the farmhouse's northwest-facing façade. The wagon shed, detached barn, and garage are located southeast of the ca. 1830 to 1850 farmhouse. The farmstead is recommended eligible under Criterion A for Agriculture/Farming and Criterion C Architecture, at the local level, as an intact example of mid-nineteenth-century agricultural architecture in Greene, Maine. Benjamin Allen (1797-1884) was the son of John Allen, an early settler in Greene, Maine. The John Allen House (**ID-615**) is approximately ½ mile south of this farmstead. Benjamin Allen purchased the property from his uncle Jarius Phillips, sometime between 1820 and 1837. Research shows the property was a dairy farm under O.C. Wight's ownership in the early twentieth century (Mower 1938), but the agricultural outbuildings were constructed prior to that period and do not have a design or features related to dairy use.

Overall, the buildings appear minimally altered. The farmhouse has replaced windows throughout and a skylight added on the west-facing roof slope. These alterations have impacted its integrity of materials and workmanship, but it retains high integrity in all other aspects. The connected barn, wagon shed, and detached barn are all in poor to fair condition with plywood in-filled doors and replacement siding in places impacting the integrity of materials and design. The outbuildings appear to retain integrity of location, setting, workmanship, feeling, and association. Overall, the property retains sufficient historic integrity to convey its significance. The proposed period of significance is c. 1830-1968.

The farmstead (**ID-629/MCHP No. 234-0013hfs**) located at 6 Addition Road in the southwestern corner of the town of Leeds, is located 0.2 miles east of the direct APE, within the indirect APE and approximately 0.31 miles from the eastern edge of the indirect APE boundary. The complex is comprised of a connected vernacular farmhouse (**ID-631**), one detached dairy barn (**ID-627**), a silo (**ID-628**), two hay barns (**ID-630** and **ID-632**), and a storage barn (**ID-633**). Resources **IDs 629-632** were all previously determined eligible for listing in the National Register of Historic Places by the MHPC on October 29, 2014. Resource **ID-633** is a newly recorded structure located within the boundaries of the Addition Road farmstead. The storage barn (**ID-633**) is a one-story, rectangular plan, frame vernacular structure. The exterior is clad in weatherboard and the front gable roof is covered by a replacement metal sheathing. Spaces for windows and a garage-type entry door punctuate the facades, however, the building lacks both windows and an exterior entry door. Based on MHPC's previous determination for the farmstead that it is recommended eligible under Criterion A in the area of agriculture and Criterion C at the local level as an intact example of late nineteenth-century agricultural architecture, SEARCH recommends that resource **ID-633** also be considered eligible for listing in the NRHP as it contributes to the setting and architecture of the farmstead under both Criterion A and Criterion C. The resource appears to retain integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is the late nineteenth century through 1968.

Appendix Map Number 34

The **John Allen House, 196 North Mountain Road (ID-615)**, is recommended eligible under Criterion A for Early Settlement and Development and Criterion C Architecture as an example of the Greek Revival style. The house is one-story with three bays and has a central hall plan. The building has brick walls and clapboard siding on the gable ends. The front door with sidelights and simple window crowns are the only stylistic details present, both associated with the Greek Revival Style. The residence was likely constructed ca. 1795 by John Allen, a Revolutionary War veteran and one of the early settlers in Greene (Mower 1900). The house retains high levels of integrity of location, setting, feeling, association, and design. Integrity of materials and workmanship has been impacted by some replacement windows or storm windows and new roofing material. Overall, the house retains sufficient historic integrity to convey its significance. The proposed period of significance is c. 1795-1968.

Appendix Map Number 36

Pan Am Freight Main Line (ID-487) crosses the project area at Merrill Road in Lewiston and runs between Mattawamkeag, ME and NH. Recommended eligible for NRHP listing under criterion A: Transportation. The Pan Am Freight Railroad crosses the project area at multiple locations. This segment that crosses at Merrill Road was formerly part of Maine Central Railroad and provided an efficient and effective means for transporting goods allowing for commercial and industrial development which spurred growth and settlement of the area. According to historic topographic maps this crossing has existed since at least 1908 (<https://www.historicaerials.com>). Although the crossing and tracks have likely undergone maintenance and upgrades over the years, the **Pan Am Freight Main Line (ID-487)** retains integrity of design, feeling, association, and location and would be a contributing resource to a recommended NRHP eligible non-contiguous railroad historic district. The proposed period of significance is the early twentieth century through 1968.

Pan Am Freight Railroad Line – culvert (ID-488) located approximately 10 feet east-northeast of the Pan Am Freight Railroad Line Merrill Road crossing in Lewiston. Recommended eligible for NRHP listing under criterion A: Transportation. The granite block culvert is approximately 24 feet long and runs under the railroad bed. Railroad ties frame the top of the culvert on the southerly side of the tracks. This is a very good example of an intact and well-maintained granite culvert. The **Pan Am Freight Main Line - culvert (ID-488)** retains integrity of materials, workmanship, design, feeling, association, and location and would be a contributing feature in the recommended NRHP eligible Pan Am Freight Line railroad corridor. The proposed period of significance is the early twentieth century through 1968.

Appendix Map Number 36a

The farmhouse and barn (**ID-543 and ID-544**), located at River Road in Greene, are both recommended eligible for NRHP listing under Criterion A Agriculture/Farming for associations with farming in Greene. The connected farmhouse is an indigenous form to New England from the early nineteenth century through the early twentieth century. One hallmark of the connected farmhouse is a shared design and style among the farmhouse, connecting backhouse or hyphen, and barn, which is evident at this property. The c. 1908 farmhouse has minimal alterations, including some replacement windows on the main block and connecting hyphen and replacement siding on the house. The c. 1908 barn has some alterations, most notably the main barn doors appear to have been modified from a round arch style to rectangular doors and the arch filled in with plywood and fixed pane windows. The property retains high integrity of location, setting, feeling, and association. Integrity in the aspects of design, materials, and workmanship have been impacted by the replacement windows and barn door alterations, but each of these aspects retains integrity sufficient to convey the property's architectural significance. Overall, the farmhouse retains sufficient integrity to convey its significance as an early twentieth century connected farmhouse. The proposed period of significance is c. 1908-1968.

Appendix Map Number 40

Stukas Farms (ID-1530), located at 144 Ferry Road in Lewiston, is recommended eligible for listing in the National Register under Criterion A for Agricultural/Farming as a late-eighteenth

century farmstead with orchards and under Criterion C for Architecture as a collection of intact agricultural buildings. The period of significance covers the historic period during which the property was used for agricultural purposes, 1791-1968. The property includes a house (**ID-338**), garage (**ID-337**), barn (**ID-336**), and outbuilding (**ID-335**), which are clustered together on the east side of Ferry Road. The property currently operates as an orchard, and groves of trees are located to the north, east, and south of the buildings. The Lewiston assessing office lists a construction date of 1791 for the house, while the book *Historic Lewiston: Its Architectural Heritage* notes a construction date of 1798. The book categorizes the architecture of the house as a noteworthy design that demonstrates the “practicality of early Maine farmers who adapted their buildings to climate and function, using the cheap, plentiful wood from their surrounding land.” It notes that the Stukas Farm was originally the “Litchfield place,” and that the location on Ferry Road was advantageous as it was once an important link for transporting produce to the Garcelon Ferry which crossed the Androscoggin River. The house faces west toward Ferry Road. It has a T-shaped plan with a two and a half story front portion with side-gable asphalt shingle roof. The rear portion is capped with a metal gable roof. The rear portion is only one-story and appears to have a utilitarian, rather than residential, function. The house (**ID-338**) has replacement synthetic siding and replacement windows. The porch may be a later addition. The barn (**ID-337**) sits directly behind the house and is separated by a driveway. It is three stories in height and has a front-gable roof over the primary section, with shed roof secondary areas on the north and south elevations. The barn is clad in wood-shingle siding and features decorative molding on door and window surrounds. There is a cupola centered on the gable roofline. The garage (**ID-336**) is a small front-gable roof building with a rectangular footprint. It faces north toward the house, rests on a stone foundation, and has wood shingle siding and an asphalt shingle roof. The remaining outbuilding (**ID-335**) is a small agricultural building with a shed roof. It sits southeast of the barn and has a rectangular footprint and wood-shingle siding. Aerial imagery shows three additional buildings on the property that were not visible during field survey. At least one of the buildings was added to the site after 1953 (per aerial imagery available at www.historicaerials.com), but the other two may contribute to the significance of the site. The orchards to the north and south of the house also appear in the 1953 aerial image, while the orchard to the east did not contain trees at the time. The Stukas Farms property is a significant example of a continuously operating agricultural property in Lewiston. Although there are some physical integrity concerns with the house, the layout and massing of the buildings remains intact and the Stukas family continues to own a large parcel with agricultural use. The property retains sufficient integrity to convey its significance for agriculture under Criterion A. Despite the integrity concerns of the house, the buildings also comprise an architecturally significant farmstead under Criterion C for architecture.

Appendix Map Number 40a

Maine Central Railroad - Lewiston Branch (ID-1528) is located south of Old Lisbon Road in Lewiston and runs between Lewiston and Brunswick, ME. The railroad is recommended eligible for NRHP listing under criterion A: Transportation. The Maine Central Railroad crosses the project area at multiple locations. This segment of the railroad in South Lewiston was previously surveyed and MHPC made no determination of eligibility due to lack of information in February 2013 (MHPC ID #236-1036). Maine Central Railroad provided an efficient and

effective means for transporting goods allowing for commercial and industrial development which spurred growth and settlement of the area. This segment in Lewiston was established initially as the Androscoggin railroad in the mid-1800s before being leased by Maine Central in 1871. According to historic topographic maps this segment through South Lewiston was not altered for construction of the Maine turnpike. Although the tracks have likely undergone maintenance and upgrades over the years, the **Maine Central Railroad - Lewiston Branch (ID-1528)** retains integrity of design, feeling, association, and location and is recommended eligible for NRHP listing. The proposed period of significance is the mid-nineteenth century through 1968.

Appendix Map Numbers 40 and 40b

The **Clough Cemetery (ID-352)** is located between Lisbon Street/ME-196 and South Lisbon Road in Lewiston. Established in the early 1800s, Clough Cemetery is located in South Lewiston, and is immediately across the street from the NRHP-listed Clough Meeting House (**ID-356**). The oldest portion of the cemetery is located on the north end, off of South Lisbon Road. This original portion of the cemetery is enclosed by mature trees, while more modern burials are located to the south beyond the trees. The cemetery's date of establishment and association with the Clough Meeting House connects it to early area settlers. Although there has been significant development along ME-196, the mature trees around cemetery help to maintain integrity of setting, feeling and association as an early pastoral cemetery. It is recommended eligible for the NRHP under Criterion A at the local level for associations with Early Settlement and Development, Criterion C for Architecture and Design for the decorative memorials. The proposed period of significance is the early nineteenth century through 1968.

Lewiston Grange #2 (ID-373), is located at 2 Crowley Road in Lewiston. The Lewiston Grange was among the founding local Granges in Maine, and the building is recommended eligible for NRHP listing under Criterion A for Social History and Civic Affairs, and C: Architecture at the local level. The period of significance is 1902-1968, representing the years during which the building was actively used by the Grange in its current location. The Grange's first meeting was held in 1874 (Hodgkin 2003). Initially the Grange met in the Clough School House at 15 Crowley Road, as well as in homes of the members. The current building replaced those temporary spaces in May of 1874, when they held the first meeting in this building. The building has been moved twice, once in 1885, and again in 1902. The original 1874 building had a rectangular footprint, but after it was moved to its final location in 1902 a stable was added to the north side creating an L-shaped footprint. The building contained a dining hall, kitchen, and stable on the lower level, and a meeting hall, anterooms, and exhibition hall on the second level. The building was remodeled in 1931-32, at which point the interior was completely reconfigured, and a porch was added at the primary entrance (Hodgkin, 2003). The L-shaped building currently has a cross-gable roof and wood siding. Detailing is limited to decorative moldings at the corners and roofline. The Grange sold the building in 1989, and by 1994 the Lewiston Grange organization had dissolved. It has most recently functioned as a rental facility. The building maintains the footprint and massing from the 1931-32 remodel. The porch has been infilled and the building has experienced some material changes, including window and door replacements. Despite diminished integrity of materials and workmanship, the building retains

sufficient integrity to convey its significance under Criterion A as the meeting place of one of Maine's earliest and most influential Granges. The proposed period of significance is c. 1874-1968.

Appendix Map Number 41a

The farmstead (**ID-1529**) located at 117 Royalsborough Road in Durham, includes a farmhouse located west of Royalsborough Road (**ID-320**); a two-story detached poultry barn (**ID-318**) constructed ca. 1880 to 1920; a second two-story detached barn (**ID-319**) constructed between ca. 1840 and 1860; a small two-and-a-half story detached barn (**ID-321**) constructed between ca. 1900 and 1920; and small one story coop (**ID-322**) constructed between ca. 1900 and 1920. It is situated between Lewistown, to the north, and Durham, to the south, on the west bank of the Androscoggin River. The farmhouse, constructed ca. 1820 to 1850, is a one-and-a-half story vernacular residence with a rear-ell, built in a Cape plan with five bays on its primary, east-facing façade. The building's side-gable and rear-ell's cross-gable roof has a moderate slope and is clad with asphalt shingles. It features an off-centered brick chimney on the backslope of the roof of the side-gable section and a second chimney on the ridge line of the rear-ell. The windows are single and paired one-over-one, single hung sash vinyl replacement units, and fixed window units flanked by units that either slide or swing out. The house does not have a front porch, just a stoop leading to the main entrance. The front door appears to be a replacement panel unit, and a modern storm door has been added. A second entrance is on the south elevation of the home and also appears to be a replacement. The home has a continuous brick foundation. All of the outbuildings have gable front roofs with exterior walls clad in wood shingles and are situated southeast of the farmhouse. The poultry barn has a moderate pitch roof clad in metal and a granite foundation. The second barn has a moderate pitch roof clad in asphalt shingles and a granite foundation. The two-and-a-half story barn has a moderate pitch roof clad in metal and a concrete foundation. The coop has a low pitch roof clad in metal; the foundation material could not be discerned from the public right-of-way.

The farmstead is eligible under Criterion A for in the area of Agriculture/Farming and Criterion C for Architecture as an intact local example of a connected early nineteenth-century farmstead. While the farmhouse has had numerous material alterations, the farmstead retains its historic agricultural landscape, with open pasture to the north of the complex, as well as the setting of the connected residence close to the road, which is typical of this type of building construction (Hubka 1984). The property retains integrity of setting, location, design, feeling, and association, and is an example of a local resource useful for interpreting the development of agrarian society in rural New England. The proposed period of significance is c. 1820-1968.

Appendix Map Number 41b

The farmstead (**ID-1527**) at 19 Stackpole Road in Durham, constructed ca. 1790 to 1830, includes a farmhouse (**ID-314**), two connected barns (**ID-312 and ID-313**), a detached barn (**ID-311**), and a small detached storage building (**ID-315**). It is situated between Lewistown, to the north, and Durham, to the south, on the west bank of the Androscoggin River. This farmstead is eligible for listing in the National Register under Criterion A in the area of Agriculture/Farming

and Criterion C for Architecture as an intact local example of a connected late eighteenth to early nineteenth-century farmstead. The connected farmhouse is an architectural form distinct to New England that relied on the connection of a larger house, a small house, and agricultural barns through direct additions and a series of ells. The continuous form represented both a practical use for protection from the elements, as well a symbolic function of the progression of agricultural improvement (Hubka 1984). Located on the west side of Stackpole Road, the one-and-a-half story vernacular farmhouse has a Cape plan and five bays on its primary, south-facing façade. The building's side gable moderate pitch roof is clad with asphalt shingles and features two interior end chimneys in the main portion of the house. Two dormers with hipped roofs are on the primary facade. There is a side-ell addition on the west elevation of the main house, with a centered brick chimney on the ridge line. There are five bays on the main section of the home's primary façade, while the side-ell's primary façade features three bays. The exterior walls are clad in vinyl siding. The window units are all one-over-one vinyl replacement units. The house does not have a front porch, just a simple stoop. The main entrance to the house is centered on the south façade and features an infilled Palladian window with sidelights flanking the door. The door to the home appears to have been removed and replaced with a solid piece of wood. A one-story vernacular barn, constructed ca. 1800 to 1830, is connected to the west side of the side-ell addition. The barn is constructed of sawn heavy timber, has a gable front roof clad in metal, exterior walls clad in clapboard, and a granite foundation. The second connected vernacular barn, constructed ca. 1830 to 1860, is located to the west of the first connected barn. The one-story barn is also constructed of sawn heavy timbers, and has exterior walls clad in clapboard. The gable front roof is clad in metal, and the barn has a fieldstone foundation. A detached two-story barn is located to the west of a long drive leading back to the northwest of the farmstead. This barn was constructed ca. 1900 and has a sawn heavy timber structural system. It has a gable front roof that is clad in metal, walls are clad in vertical boards, and a fieldstone foundation. The one-story detached vernacular storage building is also located to the west of the long drive. It was constructed in the early twentieth century, and has one bay on its primary façade, which faces east. The gable-front roof is clad in metal, and the exterior walls are clad in clapboard. The foundation system for the storage building is pier and beam. The farmstead retains its historic agricultural landscape, with pastureland to the west of the complex. Material alterations to the farmstead include replacement roofing, siding, windows, and missing front door. However, the farmstead retains a high degree of architectural integrity and spatial arrangement, including the close proximity to the road, as was common with this type of building construction (Hubka 1984). The property retains integrity of setting, location, design, feeling, and association, and is an example of a local resource useful for interpreting the development of agrarian society in New England. The proposed period of significance is c. 1800-1968.

Appendix Map Number 43

The farmstead (**ID-1509**) at 291 Durham Road is on the Durham/Pownal town line and includes a farmhouse located south of Durham Road (**ID-291**) and three detached barns (**ID-292, ID-293, and ID-294**). This farmstead is eligible for listing in the National Register under Criterion A in the area of Agriculture/Farming and Criterion C for Architecture. The farmhouse, constructed ca. 1880, is a two-story vernacular building with five bays on its primary, southeast-facing

façade. The building's side gable roof is clad with asphalt shingles and features a brick chimney located on its central ridge. The exterior walls are clad with clapboard siding and include an attached partial-width porch on the primary façade. Windows on the building's first floor are wood one-over-one, double-hung sashes without ornamentation. Windows on the building's second floor are wood six-over-six, double-hung sashes without ornamentation. A small side addition is located on the building's southwest-facing façade. Three detached clapboard siding-clad barns are located southwest of the ca. 1880 farmhouse. The barns present on the farmstead facilitated livery and farming of the site. The farmstead is recommended eligible under Criterion C at the local level as an intact example of late nineteenth-century agricultural architecture in Durham, Maine. The buildings appear minimally altered. The farmstead appears to retain integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is c. 1880-1968.

The farmstead (**ID-1510**) at 31 Auburn Pownal Road in Durham includes a farmhouse located west of Auburn Pownal Road (**ID-299**) and two detached barns (**ID-300 and ID-301**). The farmhouse, constructed ca. 1880, is a one-story vernacular building with five bays on its primary, north-facing façade. The building's side gable roof is clad with metal sheeting and features a brick chimney located on its interior slope. The exterior walls are clad with clapboard siding. Two detached clapboard siding-clad barns are located to the west of the ca. 1880 farmhouse. The farmstead is recommended eligible under Criterion A for associations with the development of Agriculture and Farming in Durham, and Criterion C for Architecture at the local level as an intact example of late nineteenth-century agricultural architecture in Durham, Maine. The buildings appear minimally altered. The farmstead appears to retain integrity of location, design, setting, materials, workmanship, feeling, and association. The proposed period of significance is c. 1880-1968.

Appendix Map Number 44

The connected farmhouse located on Auburn Road in Pownal, is an example of a nineteenth century farmhouse with connected barn. The farmhouse (**ID-249/MHPC ID #358-0023**) is a Greek Revival vernacular cape with ell connecting to the gable front barn (**ID-250/MHPC ID#358-0023a**). The farmhouse and barn were previously surveyed in 2013, but MHPC did not make a determination of eligibility upon their review in 2014. According to the previous survey, the farmhouse dates to ca. 1820 and the barn was constructed ca. 1860-18800. The farmhouse sits on a granite block foundation, has wood clapboard siding, a side gable roof, and a connecting ell with side porch. Classic Greek Revival features include gable returns, cornerboards, and a Greek entablature surrounding the main, centered entrance, with sidelights. The barn is also on a granite block foundation and has wood clapboard siding. The gable front barn also features cornerboards, gable returns, and triangular pediments over the first story windows. The entrance to the barn is centered on the west façade beneath a pent roof. The double sliding barn doors do not appear to be original. Likewise, a cupola centered on the roof ridge is likely a late-nineteenth or early-twentieth century addition. The farmhouse is situated on the west side of Auburn Road, and features rolling topography, mature trees, and former pastureland.

The farmhouse and connected barn are eligible for listing in the National Register under Criterion C for Architecture. The recommended period of significance is 1820-1968. The connected farmhouse is a classic example of mid-nineteenth century vernacular farmhouse architecture. While the resource has not operated as a working farm within the last 50 years, the connected farmhouse still reads as mid-nineteenth century farmhouse and retains a high degree of integrity. The farmhouse retains integrity of design, materials, and workmanship, as alterations such as the cupola and added ell were all made during the period of significance. In addition, the farmhouse retains integrity of location, feeling, and location. The farmstead retains sufficient architectural integrity to convey its significance as a mid-nineteenth century farmstead under Criterion C. The proposed period of significance is c. 1820-1968.

Appendix Map Number 44a

North Pownal Village Historic District (ID-1594) North Pownal Village has not been surveyed as a historic district, but the majority of the resources within the area were previously surveyed in 2009. MHPC has not made a determination of eligibility for these resources. Field survey by SEARCH in 2018 identified the cluster of buildings associated with the village at the intersection of Lawrence Road, Fickett Road, and Auburn Road as a historic district and determined the boundary extends east and west along Fickett Road, and south on Auburn Road to the intersection with Poland Range Road. There are twenty-three buildings located within the proposed **North Pownal Village Historic District (ID-1594, containing ID-252 through ID-275)**. Overall, the buildings date from the early nineteenth century through the mid-twentieth century. Architectural styles include Greek Revival, Italianate, Colonial Revival, and vernacular. The buildings overall retain most aspects of integrity. Modern alterations such as additions, replacement windows, and vinyl siding have made some buildings ineligible for individual NRHP listing. As a whole, however, the buildings constitute a nineteenth century rural village and retain integrity of feeling, location, association, and setting.

North Pownal is one of three villages that make up the Town of Pownal. The Pownal area originally was part of the older towns of Freeport and North Yarmouth. In 1808, residents separated to form the new town of Pownal, named to honor the mid-eighteenth century Governor of Massachusetts, Thomas Pownall. The area was settled in the first half of the eighteenth century. Many of the early settlers came from coastal Maine. By 1800, the area that became Pownal had a mill, a school house, and a church (Chadbourn 1957:35-36). As settlement continued in Pownal, the town was divided into three villages: Pownal Center (often referred to as Pownal), North Pownal, and West Pownal (Boyles et. al 2008:5-8).

Located four miles north of Pownal Center where roads from Durham, Auburn, and New Gloucester met, North Pownal was settled in the last quarter of the eighteenth century. About 1800, settler Jacob Randall built a saw and grist mill in North Pownal (Boyles et. al 2008:8). Near the mill, another settler, Jonathan Newbegin, started a blacksmith shop (Clayton 1881:351). Joseph Luftkin settled in North Pownal in 1818. He established a general store, the first of its kind in North Pownal, at the crossroads. Benjamin Randall opened a store in 1826 that sold dry goods, groceries, hats, boots, hardware, and livestock (Boyles et. al 1977).

The **North Pownal General Store (ID-266/MHPC ID# 358-0017)**, located at the intersection of Fickett and Lawrence Roads, reportedly opened in the nineteenth century. The owner from 1900 through 1919 was William J. Sawyer. The store sold groceries, dried fish, tinware, clothing, sewing supplies, tobacco, candy, and other goods. Until 1907, the building also served as the post office. The store had numerous owners through the twentieth century. Roland and Joyce Salisbury owned the store, which included a gas station and auto repair shop, from 1978 until 1996 (Boyles et. al 2008:164-167).

In the late nineteenth century, North Pownal had thirteen dwellings, a store owned by James Rice, a blacksmith shop, a harness shop, Methodist and Episcopal churches, and a school house. The main industry of the area at the time was raising hay and apples and providing milk for the Portsmouth market (Clayton 1881:351).

North Pownal United Methodist Church (ID-254/MHPC ID #358-0004), a prominent landmark in the village, was founded in 1844 and is one of the oldest buildings in the area. The church stands on the corner of Lawrence and Poland Range Roads. In 1908, the congregation added a steeple and a vestry. Membership declined through the Great Depression along with the general drop in population in the area. The church resurged after World War II and added electrical lighting, a new organ, and a furnace in the 1950s and 1960s. In 1992, the congregation adjoined a historic (1894) one-room **school house (ID-253/MHPC ID# 258-0003)** to the church (Boyles etl. al 2008:276-282).

The roads of Pownal have been important to its history as connections for local and regional commerce. Farmers and other labors built the early roads with rock, gravel, sand, and clay. These narrow paths evolved in terms of material, width, and configuration over time. Beginning in 1871, the Town of Pownal took over maintenance of all of the present-day town-managed roads. Into the early twentieth century, local tax revenue and some state aid supported Pownal's roads. By the 1930s, many residents owned automobiles and they had grown weary of the rough, winding roads of the town. The Works Progress Administration assisted with funding and labor in this period to improve the road from Pownal to Freeport, now known as Elmwood Road (Boyles et. al 2008:209-213).

The district embodies the characteristics and feel of a nineteenth-century village. The buildings include connected farmhouses, blacksmith shop, general store, the North Pownal School, Methodist Church, and fire station. The village was also the location of the Portland Cheese Factory until it burned in 1890 (MHPC Inventory #357-0007). Overall, the buildings retain a modest degree of integrity, and the district does not have any visible modern intrusions. The village is historically significant under Criterion A for its association with the development of North Pownal. The village is also significant under Criterion C for architecture, as many of the buildings are excellent examples of various architectural styles from the nineteenth century such as Greek Revival, Italianate, Colonial Revival, and vernacular. SEARCH contends the **North Pownal Village Historic District (ID-1594 containing ID-252 through ID-275)** is NRHP eligible under Criterion A and C, and its period of significance is ca. 1830-1968.

Appendix Map Number 45a

York Bridge #3249 (ID-1304) carries S. Belfast Road over the West Branch of the Sheepscot River, in Windsor. This slab style bridge is recommended eligible for NRHP listing under Criteria A: Transportation and C: Engineering. The bridge has a concrete slab girder supported on two concrete piers with concrete abutments and wingwalls. The deck is a paved asphalt road between concrete curbs topped with a metal guardrail. According to MaineDOT Bridge Maintenance's bridge inventory, this 86-foot long slab bridge was constructed in 1936 using prestressed concrete, which makes it an early example of prestressed concrete bridge construction. The bridge is a representative example of a simple prestressed concrete slab bridge. Period of significance is 1936, date of construction to the 50-year cutoff, 1968.

Appendix Map Numbers 47 and 47a

St. Denis Historic District (ID-1595) includes the NRHP-listed St. Denis Church (**ID-1368**) and associated rectory, parish center, churchyard cemetery, and Calvary Cemetery (**ID-1366, ID-1367 and ID-1369 through ID-1371**). Located on Grand Army Road/Route 126 at intersection with Cooper Road, where name of Route 126 changes to Gardiner Road. The historic district is recommended eligible for NRHP listing under Criterion A: Settlement, Social History, and Religion for associations with settlement in Whitefield, Irish immigration, and the spread of Catholicism; the churchyard burial ground contains the remains of the earliest settlers in area Criterion B: Person, for association with Father Dennis Ryan, instrumental in drawing Irish immigrants to the area and the growth of the Catholic Church in New England; and C: Architecture, as an example of transitional nineteenth-century architectural styles. Period of significance 1813-1930, the formation of the cemetery through the alteration of the parish hall

According to the NRHP form for St. Denis Catholic Church (**ID-1368/NRHP #76000102**), it is the second oldest Catholic church in Maine. The original church, built of wood in 1818, was established by Father Dennis Patrick Ryan, who was the first priest to be ordained in New England. Maine was still a province and was under the Archdioceses of Boston at that time. He chose the church's location based on the existing Irish population and the availability of land to entice new settlers (St. Michael Catholic Parish website, viewed 08/15/2018: <https://stmichaelmaine.org/history-st-denis>). Father Ryan was also the catalyst for development of the surrounding area as he recruited more Irish immigrants to expand the farming community. In addition to St. Denis, Father Ryan ministered to several mission churches in Maine which were established primarily by Irish immigrants. When construction of the brick church was completed, it was the largest catholic church in Maine

The current church was built in 1833 with bricks supplied by the parishioners; the Italianate bell tower was added in 1861. The stone rectory (**ID-1370**) located behind the church was built in 1851, along with the carriage house/barn (**ID-1371**). The brick church was a simple Greek Revival influenced building, reminiscent of the New England meeting houses, until the campanile style bell tower was added, giving it more character. The Parish Center (**ID-1367**) was built in 1871 as an orphanage and convent, which was run by the Sisters of Mercy. It also served as a school until 1888. The Italianate influenced building had a third story that was removed after a fire in 1922 (<https://stmichaelmaine.org/history-st-denis>). The adjacent

churchyard (**ID-1369**) was established in 1813 and was active until 1913. The Calvary Cemetery (**ID-1366**), approximately a ¼-mile to the east was established in 1844 and is still active today. The buildings and cemeteries are in a pastoral setting reflecting their rural roots and maintain their historic setting at a country crossroads.

Appendix Map Number 48

House (ID-1385) located on Townhouse Road just south of the intersection with Merigold Farm Lane in Whitefield. The circa 1850-1860 Gothic Revival style house is recommended eligible for NRHP listing under criteria A: Agriculture, Settlement/Development; C: Architecture as a good example of an intact transitional Gothic Revival and Italianate rural farmhouse. The side gable with centered cross gable steeply pitched roof is typical of the Gothic Revival style. The symmetrical 3 bay wide façade consists of a centered entry with simple surround and transom window with typical Italianate style bay windows on each side of the entrance. The windows on the secondary façades are topped with hood moldings with dentils. There are wide frieze boards topped by cornices with dentil molding on the front (east) and side façades (north and south). A double ell addition extends from the north side of the house. The house has clapboard siding, a standing seam metal roof, and primarily 2/2 double hung windows. The **House (ID-1385)** is located in an intact rural setting and retains all aspects of integrity: location, setting, design, workmanship, materials, feeling and association. The proposed period of significance is c. 1850-1968.

Appendix Map Number 49

Albee Bridge #3831 (ID-1408), E. River Road over Sheepscot River, Whitefield. This concrete T-beam bridge, built in 1946, is recommended eligible for NRHP listing under criterion A: Transportation. It is two concrete T-beams spanning 94 feet over the Sheepscot River with a concrete pier, and concrete abutments and wingwalls. The deck carries an asphalt paved road between concrete curbs with concrete guardrails. Recommended NRHP eligible as a good example of T-beam bridge, typical of mid-twentieth century bridge construction. Albee Bridge is an early post World War II construction. Period of significance is 1946, date of construction, to the 50-year cutoff, 1968.

Appendix Map Number 49a

House (ID-1398), located at 14 Pittston Road in Whitefield. A prior survey completed in November 2008, but no determination of eligibility was made by MHPC. The late 18th to early 19th century two story, double pile house is recommended eligible for NRHP listing under criteria A: Community Development and C: Architecture. The clapboard sided house is a 5-bay wide side gable with asphalt roof, two brick chimneys and a granite foundation. The evenly spaced windows are 2/2 and the central front entry has a simple, plain surround. There is a frieze board under the roof overhang, and the chimney have simple brick corbelling. The house sits on a rise back from the road with a narrow sidewalk leading from the road to the granite steps and landing at the front door. It is a prominent early home located near the central crossroad of Whitefield and is a good example of simple Georgian style influenced residence. The proposed period of significance is the late eighteenth century through 1968.

Appendix Map Number 53

Greenlawn Cemetery (ID-1457) in Wiscasset was established in the early nineteenth century. A modern section of the cemetery was added to the south between 1983 and 1997 (historicaerials.com), and is known as Greenlawn Memorial Garden. The north and south sections of the cemetery are separated by a stone wall. A white picket fence separates the cemetery from Rummerill Road to the west, and stonewalls mark the cemetery boundaries on the north, south, and east. The historic (northern) portion of the cemetery features a gravel drive that bisects the cemetery, running west to east, and gravel drives along the north, south, and east boundaries. The historic section consists mainly of marble and granite gravestones and obelisks that are aligned in rows with the cemetery's slightly rolling topography. This section is divided by uniformly-sized plots in a grid pattern. Plots are marked by small granite stones. The southern (non-historic) section of the cemetery features a gravel rectangular drive that circumnavigates the cemetery, with gravel drives extending south to areas of the cemetery that are yet to be utilized. The modern section of the cemetery consists primarily of granite gravestones. Both the historic and modern portions of the cemetery feature shrubs and mature trees. The cemetery contains over 2100 burials (findagrave.com).

The cemetery retains most aspects of integrity and a bucolic setting. It is set back from the east side of Rummerill Road; the west side of Rummerill Road is thickly forested. The modern section does not detract from the historical section to the north, and together they represent the growth and continuity of use over time. Greenlawn Cemetery retains integrity of design, materials, workmanship, setting, feeling, location, and association. It is historically significant under Criterion A Settlement for its association with the early settlement of Wiscasset. Its continued use into the present day represents the growing needs of Wiscasset. Greenlawn Cemetery is also significant under Criterion C Design as an example of an intact rural cemetery that retains its rural setting and design. Its proposed period of significance is ca. 1800-1968.

Appendix Map Number 55

The Maine Central Railroad - Rockland Branch (ID-1478) crosses at Two Bridge Road, Wiscasset approximately 0.32 miles (0.52 km) east of the existing transmission line. The Rockland Branch also crosses the direct APE of the project area in Wiscasset. The Maine Central Railroad crosses the project area at multiple locations, and sections of the railroad have previously been surveyed in other projects. The Rockland Branch segment of the Maine Central Railroad in Wiscasset has not previously been recorded. The railroad is significant under Criterion A for its association with transportation. Maine Central Railroad provided an efficient and effective means for transporting goods allowing for commercial and industrial development which spurred growth and settlement of the area in the late nineteenth and early twentieth centuries. Initially established as the Knox and Lincoln Railroad in 1871, the Rockland Branch became part of the Maine Central Railroad in 1891. The Rockland Branch extended from Brunswick to Rockland, a distance of 56 miles, and serviced the towns of Bath, Woolrich, Wiscasset, Newcastle, Nobleboro, Waldoboro, Warren, and Thomaston (abandonedrails.com). Passenger service along the Rockland Branch was discontinued in 1958 due to the increase in automobile traffic, and this line is currently owned and operated by the Central Maine and Quebec Railroad. Although the crossing and tracks have likely undergone maintenance and upgrades

over the years, the Maine Central Railroad - Rockland Branch Crossing (**ID-1478**) retains integrity of design, feeling, association, and location. It is eligible under Criterion A Transportation, for its association with the railroad and developing economy in Maine in the late nineteenth through mid-twentieth centuries. Its period of significance is 1871-1958.

4.0 FINDING OF EFFECTS

In order to evaluate the project-related effects posed by the undertaking on eligible and listed historic properties, SEARCH applied the criteria of adverse effects, as described in 36 CFR 800.5. An adverse effect occurs when an undertaking may directly or indirectly alter any of the characteristics of a historic property that make it eligible for listing in the NRHP, particularly when the alteration would diminish the integrity of the historic property's location, design, setting, materials, workmanship, feeling, or association. Examples of adverse effects on historic properties may include, but not be limited to, physical destruction of or damage to all or part of the property; alterations to a property, including restoration, rehabilitation, repair, maintenance, stabilization, hazardous material remediation, and provision of handicap access, that are not consistent with the Secretary of the Interior's Standards for the treatment of historic property; relocation of a property; change of the character of the property's use or of physical features within the property's setting that contributes to its historic significance; introduction of visual, atmospheric, or audible elements that diminish the integrity of the property's significant historic features; neglect of a property which causes its deterioration; and/or transfer, lease, or sale of a property out of Federal ownership or control without adequate and legally enforceable restrictions or conditions to ensure long-term preservation of the property's historic significance (NPS 36 CFR 800.5 (a)(1)). A finding of no adverse effect is applied when the undertaking's effects do not meet the criteria mentioned above, or the undertaking is modified or conditions are imposed to ensure consistency with the Secretary of the Interior's Standards for the treatment of historic properties (36 CFR part 68). .

Importing publicly available parcel data into the Project GIS, parcels with above ground historic properties were analyzed for potential affect by the Project. For example, a resource that was on a parcel intersecting the NECEC direct APE was considered directly affected by the Project. A resource on a parcel intersecting the land cover viewshed was considered indirectly affected because the Project may be visible from one or more locations on a parcel. Utilizing the parcel data and Project GIS, effects determinations were made for the 419 historic resources:

- Finding of Effects recommendation for the 419 historic resources:
 - 88 historic resources have will be directly and indirectly affected
 - 69 historic resources will not be adversely affected;
 - 19 historic resources which compose four properties will be adversely affected
 - One property has been determined eligible and three are recommended eligible
- 331 historic resources will be indirectly affected; none of these effects will be adverse

The finding of effects discussion is organized by Direct Effects (**Section 4.1**) and Indirect Effects (**Section 4.2**). Each of the three effects analysis sections is further organized by Appendix Map Number, at the request of MHPC, and then grouped by Adverse Effect or No Adverse Effect for the Direct and Indirect Effects. Photo simulations of project impacts provided by the client are included in **Appendix D**.

4.1 DIRECT EFFECTS

Adverse Effect

Appendix Map Number 14

The farmstead (**ID-1603**) with connected farmhouse and barn (**ID-1125, ID-1126, and ID-1127**) at 23 Horseback Road in Anson, is located on the north side of the road on a small hill overlooking a pond. It is recommended eligible for NRHP listing under criteria A: Agriculture/farming development and C: Architecture. There is pastureland and agricultural fields to the east and west and woods to the north. The structures are within the indirect APE and have mature trees and plantings which partially obstruct the view of the direct APE located approximately 300 feet to the east. The entire eastern property boundary is adjacent to the Project with about 650 feet of the corridor clearly visible from the pastureland. Otherwise, the farmstead retains its rural setting, as well as feeling and association of a late nineteenth century rural Maine agricultural resource. Although there is an existing transmission line in the direct APE, the Project proposes a new transmission line with 100-foot tall towers, substantially larger than the existing 45-foot towers and the tree line, changing the current rural landscape. As a result, the Project will detract from the farmstead's rural setting and character thus creating an adverse effect on the property.

Appendix Map Number 15a

The E. Gray Farm (ID-1028), is located at 1294 Anson Road/RTE 43 in Starks and includes a total of ten historic buildings or structures on the west side of the road (**ID-1022-1027 and ID-1029-1032**) and one on the east side (**ID-1033**). It is recommended eligible for NRHP listing under criteria A: agriculture and settlement; and C: architecture. The cluster of buildings that comprise **ID-1028** is approximately 210 feet from the project area. There are clear views between the project area and the resource. The Project will have a visual effect on the resource as the parcel borders the existing utility corridor. The proposed improvements to the corridor include clearing a 75-foot wide path within the existing right of way for a new transmission line with proposed 100-foot tall transmission towers adjacent to the existing 45-foot towers in this area, which will have a significant visual effect on the resource. The viewshed of the resources has included a utility line since at least 1953 (per an aerial image available on www.historicaerials.com), which dates to within the period of significance. Improvements from this project will substantially alter the existing visual conditions of the otherwise rural farmstead and negatively impact the setting, a character defining feature of the E. Gray Farm; Therefore, the project will have an adverse effect on **ID-1028, ID-1022, ID-1023, ID-1024, ID-1025, ID-1026, ID-1027, ID-1029, ID-1030, ID-1031, ID-1032, and ID-1033**.

Appendix Map Number 20

The Bailey Hill Road parcel is comprised of a farmhouse (**ID-974**) and detached barn (**ID-975**), and immediately south and adjacent to the direct APE, which runs NE-SW across the parcel. While the Bailey Hill Road farm's integrity of feeling and association will not be compromised by the Project, the visual setting will be impacted. The existing transmission line behind the house and barn has been present since the 1950s and is about 200 feet away. The existing transmission towers are roughly as tall as the existing mature trees surrounding the farmstead and although close, are not overly prominent due to the existing trees. The Project calls for a new utility line installed on 100 foot transmission towers adjacent on the northerly side of the existing line, significantly altering the primarily rural setting. As a result, the Project detracts from the setting and feeling of the farmhouse and will create an adverse effect on the property.

Appendix Map Number 26c

The barn (**ID-795/MHPC# 249-0033a**) located at 40 Turmel Road in Livermore Falls is situated on the eastern side of the road and was determined to be eligible for the NRHP by the MHPC in November 2009 under criteria A for agriculture and C for architecture. While the barn itself is within the indirect APE and faces away from the Project, it is a mere 80 feet west of the direct APE and approximately 130 feet from one of the existing transmission lines. There are no trees or topography that shield the structure from the visual impacts of the existing transmission line or the proposed Project. Although there are existing transmission lines present, they are the same scale as the surrounding trees and not visually intrusive. The Project calls for the addition of a new line with new 100-foot tall towers and the height difference will affect the setting, feeling, and association of the barn due to the difference in scale to the surroundings. As such, the Project will have an adverse effect on the agricultural building and its primarily rural setting located at 40 Turmel Road in Livermore Falls.

No Adverse Effect

Appendix Map Number 1

Lost Camp (ID-1600) is a log driver's cabin located off of Lost Camp Road, Moxie Gore. Recommended eligible for NRHP listing under criteria A: Agriculture; and C: Architecture. Located in the direct APE, the cabin will not be physically impacted by the project. There will be an approximately 75-foot by 75-foot clearing in the area for a geotechnical bore. The power lines will make the river crossing underground, with exit and entry points approximately 1,000 feet from the river. Based on this, the project would only have temporary visual effects and would be difficult to see from the cabin. The clearing of trees would bring the cabin back to its historical setting, as the existing surrounding trees are new growth. The proposed Project will only be partially visible from this cabin and will not detract from the cabin's associations with logging and log drives; therefore, there will be no adverse effect on this resource.

Appendix Map Number 6

Currently, the **Appalachian Trail (ID-66)** crosses the direct APE three times just south of Lake Moxie in Bald Mountain Township. It first crosses the existing transmission line approximately 500 feet (152.4 m) west of Troutdale Road, where there are twelve existing transmission line

structures visible in the 150-foot (45.72 m)-wide cleared corridor. The Appalachian Trail then parallels Troutdale Road for approximately 900 feet (274.32 m) to the south, then crosses Baker Stream and continues east. The existing transmission line corridor is visible for approximately 400 feet (121.92 m) from the Appalachian Trail along Troutdale Road, where there are seven existing transmission line towers visible. The Appalachian Trail then crosses the direct APE a final time approximately 1,400 feet (426.72 m) east of Baker Stream, where there are 15 existing transmission line structures visible (TJD&A, 2017).

The existing Appalachian Trail route that crosses the direct APE is not original, as it was previously rerouted during the construction of the existing transmission line in the 1950s. The Appalachian Trail has been continuously rerouted. The National Park Service's *Appalachian National Scenic Trail Resource Management Plan* (National Park Service 2008) states that few sections of the trail are on the original route as land ownership has changed over time, noting that most sections of the current trail that are on Appalachian Trail Park Office lands were constructed in the 20 years prior to 2008. The integrity of location as it relates to the significance of the Appalachian Trail is not a prioritized aspect, particularly in sections of previous reroutes. Similarly, the integrity of design, materials, and workmanship are also not of paramount concern, except in sections with notable, historic constructed features. The setting of the Appalachian Trail varies considerably over its overall length and within Maine. The trail has secluded wilderness sections, ones with sweeping scenic vistas, and also portions in developed areas. The setting in this area would be classified as developed, with the trail paralleling a road for part of the section and several houses in the vicinity. The Appalachian Trail has crossed the existing transmission line since its construction in the 1950s, and the transmission line is a landmark noted in Trail Guides (TJD&A, 2017). In addition, hikers' experiences and continued use of the trail should not be negatively impacted. Overall, the integrity of feeling and association will remain high as related to the trail's significance for outdoor recreation. For these reasons, SEARCH recommends a finding of no adverse effect of the direct effects the proposed project will have on the Appalachian Trail. (See Section 4.2 for assessment of Indirect Effects).

Bakers Station Work Crew Housing (ID-68) is on Troutdale Road in Bald Mountain Township.. The house is approximately 7.75 miles south of the Lake Moxie Road intersection in The Forks Plantation. The house is about 560 feet west of the proposed project area with Baker Stream just to the east and dense woodlands east of the stream. The house faces west away from the proposed project area. The reconnaissance survey of this area was performed in late April, during leaf-off conditions, and the existing transmission line had some very limited visibility from Troutdale Road at this location. The modifications to the existing transmission corridor may be minimally visible above the tree line as one views this house from public right-of-way. However, it will not alter the current setting of the house, nor its associations with the former Somerset Railroad and outdoor recreation under NRHP Criterion A or the character defining features of the house under Criterion C. Therefore, SEARCH recommends a finding of no adverse effect to **Bakers Station Work Crew Housing (ID-68)**.

Bakers Station (ID-69) is on Troutdale Road in Bald Mountain Township.. The former station is approximately 7.75 miles south of the Lake Moxie Road intersection in The Forks Plantation. It is about 560 feet west of the proposed project area with Baker Stream just to the east and dense woodlands east of the stream. The station faces west away from the proposed project area. The reconnaissance survey of this area was performed in late April, during leaf-off conditions, and the existing transmission line had some very limited visibility from Troutdale Road at this location. The modifications to the existing transmission corridor may be minimally visible above the tree line as one views this house. However, it will not alter the current setting of Bakers Station, nor its associations with the former Somerset Railroad and outdoor recreation under NRHP Criterion A or the character defining features of the house under Criterion C. Therefore, SEARCH recommends a finding of no adverse effect to **Bakers Station (ID-69)**.

Appendix Map Number 7

Over-the-Horizon-Backscatter Radar Transmitter Site (ID-71, MHPC# 293-0062), Northern Terminus of Stream Road, Moscow. The former Moscow Air Force Station consisted of approximately 460 acres and the existing transmission corridor runs across the southern quarter of the property. Based on aerial images from 1956 and 1997 (<https://www.historicaerials.com/viewer>) the transmission corridor was rerouted to accommodate installation of the transmitter facility. The corridor runs adjacent to the north and then turns souths along the west side of a large open field, which formerly contained antenna arrays. Built circa 1960s, the current transmission corridor was present before the transmitter facility was constructed and is part of its historic setting.; the proposed project will minimally alter the appearance of the transmission corridor and will not adversely impact the setting of the transmitter site. In addition, the OTH-B is significant for its association with criteria A: Military history and C: Engineering and the project will not alter any character-defining features of the site nor impact the site's integrity of location, feeling, association, materials, workmanship or design. Therefore, SEARCH recommends a finding of no adverse effect on the **Over-the-Horizon-Backscatter Radar Transmitter Site**.

Appendix Map Number 9

The Wyman Hydro Project/Wyman Station, Wyman Hydroelectric Station (ID-1286), and Wyman Dam (ID-1287) is on Station Road in Moscow. The dam was constructed 1928-1931 for the purpose of generating electricity and is eligible for NRHP listing under criteria A: Community Planning/Development and C: Engineering, architecture. There is an electrical substation associated with the hydroelectric project located on the south side of the earthen dam. The proposed project calls for delivering hydroelectric power from Canada to Massachusetts utilizing existing utility corridors. The introduction of new or modified transmission poles along the existing line running adjacent to the dam or to the existing power substation will not directly impact the existing hydro power plant or dam. Nor will it significantly alter the existing setting of the hydroelectric station. Therefore, SEARCH recommends a finding of no adverse effect on the **Wyman Hydro Project/Wyman Station, Wyman Hydroelectric Station (ID-1286), and Wyman Dam (ID-1287)**.

Arnold Trail to Quebec at the Wyman Hydro Project/Wyman Dam; Bingham Dam (ID-1288) is located near Station Road and the Kennebec River at south end of Wyman Dam. The Arnold Trail to Quebec runs approximately 194 miles through Maine, and where it crosses at Wyman Lake has been significantly altered from its original appearance by construction of the Wyman Dam. However, the trail was listed in the NRHP in 1969, under Criterion A: Military history and Transportation, after construction of the dam and reservoir indicating their presence did not preclude NRHP listing of the trail. The proposed project will not significantly alter the current appearance of either the substation or the overall setting of the crossing of the Arnold Trail at Wyman Dam. Therefore, SEARCH recommends a finding of no adverse effect on the **Arnold Trail to Quebec at the Wyman Hydro Project/Wyman Dam; Bingham Dam (ID-1288)**.

The Arnold Quebec Trail (ID-1596/MHPC# 69000018) was listed in the NRHP in 1969 under Criterion A: Military history and Transportation. The trail represents a route along the Kennebec River followed by Benedict Arnold and an army of 1,050 men in the summer of 1775. Arnold's route from Popham Beach to Quebec Province generally followed the Kennebec and Dead Rivers, and the chain of ponds into Quebec. The route was largely along the east bank of the Kennebec River coming up from Popham Beach, but near Wyman Lake the expedition turned northwest toward the Dead River and Flagstaff Lake. It is at this location, in the vicinity of the present-day Wyman Dam, that the route crosses into the project area near the town of Bingham. The NRHP nomination for this resource lists key points on the route, which are largely based on written accounts of the expedition. Rather than identifying physical remnants of a trail, the nomination highlighted known features of the landscape, towns, and a select few buildings that were part of the setting in 1775. The 1969 nomination noted that the Kennebec River did not resemble the "quick flowing, shallow and treacherous Kennebec that the batteaux [sic] men knew," but noted that the Kennebec and Dead Rivers are still present, thus the alignment of the route could be generally understood. The nomination noted that the later construction of dams at 10-15-mile intervals slowed the flow of the river and altered a key aspect of the setting. The dams and associated power facilities, including a substation at Bingham and the utility corridor, were present and acknowledged when this resource was listed. The trail possesses integrity of location due to the fact that it can be traced with existing landmarks cross-referenced with historic documentation. The presumed route of Arnold and his men crosses the utility corridor near Bingham and Wyman Lake, but there are no known physical remnants to be affected by the project and its integrity of location will not be affected by the proposed improvements to the corridor. The proposed project will have no adverse effect on **The Arnold Quebec Trail (ID-1596/MHPC# 69000018)**.

Appendix Map Number 14

The **Madison Branch of the Maine Central Railroad (ID-1146)** enters the Project area in the northern outskirts of Anson and crosses the indirect and direct APE twice before exiting just north of the village of North Anson. The railroad is recommended eligible for NRHP listing under criterion A: Transportation. While the Project intersects with the historic railroad corridor, it will not affect its setting, feeling or association due to the presence of the existing transmission line and the industrial nature of the railroad; therefore, the Project will have no adverse effect on the Madison Branch of the Maine Central Railroad.

Appendix Map Number 15b

The B. F. Hilton Farm (ID-1020), occupies two legal parcels on both the east and west sides of Anson Road in Starks. The parcel to the east of the road is in the indirect effects APE and contains a connected farmhouse (**ID-1017 and 1018**) and sheep barn (**ID-1019**). The parcel to the west of the road is in the direct effects APE and contains a barn complex including a primary barn (**ID-1016**), milk house (**ID-1015**), and later barn addition (**ID-1014**). It is recommended eligible for NRHP listing under criteria A: agriculture and settlement; and C: architecture. Effects to the overall resource are evaluated as direct because the utility corridor borders the northwest corner of the west parcel. This area is in a thick stand of trees .80 miles west of the cluster of buildings and is not visible to or from the buildings. However, the utility corridor crosses Anson Road approximately 1,800 feet north of the buildings, and there is a substation in the field north of the property (not visible from the property). The parcel on the west side of the road has a tree line along its northern border, and part of its eastern border, which obscures the views to and from the project area. However, there are open fields on the east side of the road and the connected farmhouse and sheep barn have clear views to the project area, and the current towers are visible from this position. The Project calls for clearing vegetation along the north side of this portion of the exiting corridor for the addition of a new transmission line with 100-foot tall towers adjacent to the existing line. At an overall distance of over 1,800 feet the improvements to the utility corridor are expected to be minimally visible, and will not significantly impact the current viewshed; thus, the project will have no adverse effect on the setting or any character defining features of **ID-1020, ID-1014, ID-1015, ID-1016, ID-1017, ID-1018, and ID-1019**.

Appendix Map Number 23

The residence at **481 McCrillis Corner Road (ID-870)** in Wilton is recommended eligible under Criterion C as a significant local example of Greek Revival-inspired vernacular architecture. The project corridor runs directly behind the residence, with the existing transmission lines approximately 300 feet from the residence. The existing lines run through an open field and are visible behind the house when viewing from the street. While upgrades to the existing lines would be visible to and from the property, the changes would represent a minimal change from the existing conditions. Since the property is significant for its architecture, its integrity of materials, design, workmanship, and association are prioritized and none would be reduced by any minimal visual changes from the project. Furthermore, the integrity of feeling and setting have been impacted more by the demolition of associated outbuildings than the existing transmission corridor running through the northwest corner of the property. The minimal visual effects from the project would not impact the property's historic integrity nor any features that make it eligible for NRHP listing. Therefore, SEARCH recommends the project would have no adverse effect on 481 McCrillis Corner Road (**ID-870**).

Appendix Map Number 26b

The farmstead at **65 E Jay Road (ID-1565 and IDs 840-843)** is approximately 1,000 feet east of the project corridor. Looking east along E Jay Road toward the project corridor, the existing transmission line is only visible where it crosses the road before disappearing behind forest

again. The project at this location consists of upgrades to the existing infrastructure. Although the project corridor is visible to and from this property, at a distance of 1,000 feet any visible changes from the existing conditions would be minimal. This resource is recommended eligible for NRHP listing under criterion A: agriculture and settlement/development. The Project will not detract from the setting, feeling or association of this resource; therefore, SEARCH finds the project will have no adverse effect on this property.

Appendix Map 27

The **farmstead at 50 Jones Road (ID-1604)** in Livermore Falls is located at the end of a no outlet road. It is comprised of a vernacular farmhouse with Greek Revival elements (**ID-807**), one connected barn (**ID-808**), and a detached barn (**ID-809**). The farmstead is recommended eligible for NRHP listing under criteria A: agriculture/farming; C: architecture. While the structures are approximately 0.25 miles west of the direct APE and entirely within the indirect APE, the entire eastern legal boundary coincides with the western legal boundary of the Project right-of-way. Potential views of the Project from the structures should be shielded by the angles of the existing tree lines and the rolling topography of the area. The Project will not affect the setting, feeling, and association of the complex, therefore there will be no adverse effects from the Project on the farmstead located at 50 Jones Road.

Treat Cemetery (ID-781/MHPC# 249-0025) is located on Fayette Road approximately 900 feet east of its intersection with Pomeroy Hill Road in Livermore Falls. The cemetery was determined to be eligible for the NRHP by the MHPC in June 2009 under criteria A: Settlement, Development and C: Architecture, Design. It is situated entirely within the indirect APE but is immediately adjacent to the Project's direct APE. The current transmission line is shielded from view by a buffer of trees, which will continue to shield the cemetery from any visual changes in the Project corridor. The Project calls for clearing vegetation along the west side of the existing corridor and installing a new line with 100-foot tall towers, which may be partially visible above the tree line from areas within the cemetery. The proposed undertaking will not detract from the cemetery's association with settlement and development; nor will it detract from the cemetery's design; therefore, the Project will not affect the setting, feeling, and association of the complex and will have no adverse effects to the Treat Cemetery.

Appendix Map Number 29

Bowman Airfield (ID-719/MHPC# 249-0031) is located on River Road in Livermore Falls, approximately 0.25 miles south of its intersection with Park Street and is situated between River Road to the west and the Maine Central Railroad to the east. Structures at the circa 1960 airfield consist of four hangars ranging in age from the 1960s to the 1990s, as well as a 1960s-1970s clubhouse. The airfield was determined eligible for the NRHP by the MHPC in June 2009 under Criterion A for transportation. While the structures on the airfield are in the indirect APE, the direct APE and existing transmission lines currently pass immediately west of the airfield along the western property line. The buildings face away from the transmission lines, to the north or southeast, and the transmission lines are partially screened from view by a row of trees along the western side of River Road. There is a clear view of the transmission corridor along a 500-foot portion of the western border before it becomes buffered by a wooded area.

The proposed project calls for the addition of a new transmission line with 100-foot tall towers adjacent to the west of the existing lines, which requires clearing a 75-foot wide buffer within the existing right of way. The Project will be at least partially visible while looking south from most of the parcel. Due to the presence of the railroad corridor and existing transmission corridor, the Project will not significantly alter the current setting of the airfield. Although the new line will be taller and more visible than the existing lines, it will not detract from the airfield's association with transportation nor any of the other characteristics that make it historically significant; therefore, the Project will have no adverse effect on the Bowman Airfield (**ID-719/MHPC# 249-0031**).

Appendix Map Number 30a

The Maine Central Railroad – Rumford Branch (ID-699 and ID-715/MHPC #249-0045) has two identified segments within the APE. The segment from MP 0-MP 20.1 (**ID-699**) runs from Leeds Junction to Livermore Falls, and an observation point at MP 26.1 (**ID-715/MHPC# 249-0045**) was previously recorded at East Livermore. [Note: MP 26.1 was the marker on the old Farmington Branch, East Livermore is not identified with an MP on its current Rumford Branch]. The longer **ID-699** segment includes the area where the observation point (**ID-715**) was previously recorded. Due to the overlap of ID-699 and ID-715, the effects assessment has been combined. The railroad is significant under Criterion A for Transportation. The existing utility corridor is visible from various locations of the Rumford Branch Railroad and the proposed undertaking will also be visible. The vast majority of the views between the corridor and the railroad will be obscured by foliage, but there are two areas of note. North of the town of Leeds the railroad comes within 45 feet of the existing utility corridor and views will be clear in that location. Additionally, approximately 650 yards north of the **ID-715** observation point, the railroad directly crosses the utility corridor. Due to the industrial nature of the railroad the visual effects of the project will not detract from any character defining features of the railroad, nor its association with transportation. Where the railroad will cross the direct APE of the project area, the line has already been disturbed during the previous construction of the existing transmission line. Therefore, integrity of design, materials, and workmanship have likely already been lost in these small segments due to previous construction and reconstruction. The alterations to these small segments of the Rumford Branch railroad do not detract from the overall integrity of the railroad, nor its eligibility under Criterion A. Therefore, SEARCH recommends the project will have no adverse effect on the Rumford Branch Railroad (**ID-699 and ID-715**).

Appendix Map Number 36

Pan Am Freight Main Line (ID-487) railroad crosses the project area in Lewiston adjacent to the southeast side of the Merrill Road HDVC converter station. The railroad is recommended eligible for NRHP listing under criterion A: Transportation. The proposed project utilizes the existing utility corridor and calls for the addition of a line with 95-foot tall transmission towers adjacent to the existing 45-foot and 75-foot towers in the right of way, and requires an 85-foot wide area to be cleared. Due to the industrial nature of the railroad and the presence of the existing transmission lines, the proposed project will not detract from the railroad's association with transportation, nor alter the integrity of the railroad's location, design, feeling, or

association. Therefore, the Project will have no adverse effect on the **Pan Am Freight Main Line (ID-487)**.

Jackson's Pine Cone Cabins/Maine Motel and Cabins (ID-520) property sits on an irregular parcel at 1101 Main Street and generally faces west (though the individual cabins and motel buildings also face north and south). The property contains 15 individual buildings and is eligible for listing in the NRHP under criteria A for tourism in the 20th century, and C for architecture as still extant roadside cabins. The property is both visually and physically separated from the project area. There is a large substation associated with the utility corridor approximately 160 yards east of the property. Existing power lines go into and out of the substation. The setting at the motel includes power lines on both its north and west sides. To the east end of the property there is a thick stand of deciduous trees. The survey was completed during leaf-off conditions and the substation area and existing corridor is partially visible from the rear of the motel property. The visual impact of proposed improvements to the corridor and substation are expected to be minimal. The proposed additional line will be partially visible from the rear of the property. Due to the overall distance and presence of existing lines and vegetation in the area, the proposed project is not expected to noticeably alter the current setting of this resource and will have no adverse effect on **Jackson's Pine Cone Cabins/Maine Motel and Cabins (ID-520)**.

Appendix Map Number 40

The Stukas Farms property (ID-1530) is on a large parcel that is bisected by the existing utility corridor (angling to the northeast through the property). The property includes four historic buildings (**IDs-335-338**), all of which are clustered near Ferry Road on the east edge of the east parcel. Stukas Farms is recommended eligible for listing in the NRHP under criteria A: Agriculture/farming and C: Architecture. The existing utility corridor, where the work is proposed, is owned by the Central Maine Power Company. The project effects on **ID-1530** and associated resources is considered direct because the corridor cuts through the Stukas property; however, work will occur on land currently owned by the utility company and effects to the resource would be visual in nature. Historic topographical maps show a utility line in this location as far back as 1942, thus it was present during the property's period of significance. The barn (**ID-336**) is the closest building to the utility area, and the ground distance between the two is approximately 285 yards. There is a line of trees and an orchard in the intervening space, which obscures views of the corridor. Due to the presence of vegetation and overall distance, the existing towers are not visible from the location of the buildings, but there is a clear view along the northeast portion of the parcel where the existing corridor bisects the parcel. The proposed improvements to the corridor include clearing vegetation to the west of the existing lines, and adding 100-foot tall towers for a new line. The taller towers may be partially visible above the tree line from portions of the parcel, and will be clearly visible on the northeast portion. Overall, due to the existing trees, the Project will not substantially change the current setting of the resource and the project will not detract from the farm's association with agriculture or the buildings' architecture; therefore, the project will have no adverse effect on **ID-1530, ID-335, ID-336, ID-337, and ID-338**.

Appendix Map Number 40a

Maine Central Railroad - Lewiston Branch (ID-1528) is located south of Old Lisbon Road in Lewiston and is recommended eligible for NRHP listing under criterion A: Transportation. The railroad crosses the project area between Gould and Old Lisbon roads. The proposed project utilizes the existing utility corridor and calls for the addition of a line with 80-foot tall transmission towers adjacent to the existing 45-foot and 75-foot towers in the right of way, and requires an 85-foot wide area to be cleared. Due to the industrial nature of the railroad, the proposed project will not detract from the railroad's association with transportation nor alter the integrity of the railroad's location, design, feeling, or association. Therefore, the Project will have no adverse effect on **Maine Central Railroad – Lewiston Branch (ID-1528)**.

Appendix Map Number 41a

The farmstead (**ID-1529**) located at 117 Royalsborough Road, northeast of Durham, is within the indirect APE, and approximately 0.25 miles east of the direct APE. It is recommended eligible for listing in the NRHP under criteria A for associations with agriculture/farming and C for architecture. The farmstead consists of the farmhouse (**ID-320**), a poultry barn (**ID-318**), two detached barns (**ID-319 and ID-321**), and a coop (**ID-322**). The farmhouse faces away from the Project, to the northeast. A large wooded area located east between the farmstead and the Project largely screens the existing transmission line, but it is barely visible to the northwest of the farmstead where it crosses Royalsborough Road and the Androscoggin River, approximately 0.35 miles away. The Project calls for the addition of a new transmission line with taller towers; however, because of the distance between the farmstead and the Project, there will be no effect on its integrity of setting, feeling and association. Therefore, there will be no adverse effects of the Project on the farmstead located at 177 Royalsborough Road.

Appendix Map Number 41b

The farmstead (**ID-1527**) located at 19 Stackpole Road and northeast of Durham, is on the eastern edge of the indirect APE, and approximately 0.5 miles east of the direct APE. It is recommended eligible for listing on the NRHP under criteria A for associations with agriculture/farming and C for architecture. The farm complex is comprised of a connected vernacular farmhouse (**ID-314**), one detached barn (**ID-311**), two connected barns (**ID-312 and ID-313**), and a detached storage building (**ID-315**). Because of the distance between the farmstead and the Project, in combination with a large wooded area, open pasture, and the area's rolling topography, the Project will not affect the setting, feeling and association of the complex. Therefore, there will be no adverse effects of the Project on the farmstead located at 19 Stackpole Road.

Appendix Map Number 43

The farmstead (**ID-1509**) located at 28 Durham Road in Durham is adjacent to the east of the Project. The farmstead is recommended eligible for listing on the NRHP under criteria A for associations with agriculture/farming and C for architecture. The farmstead consists of a vernacular farmhouse (**ID-291**), and three detached barns (**ID-292, ID-293, and ID-294**). The barns located closest to the Project are 150 feet east of the direct APE, while the farmhouse faces southeast and away from the existing transmission line. The utility corridor has three

existing lines: two have 45-foot tall H-frame style towers; one has 95-foot tall towers. The proposed Project calls for replacing the existing 45-foot H-frame towers with new smaller profile 80-foot single pole towers in this section, and placing them closer together. Due to the existing transmission lines and the fact that the farmhouse faces away from the existing corridor, the proposed smaller profile towers, although taller, will not significantly alter the current setting or affect the feeling or association of the farmstead. Therefore, there will be no adverse effects of the Project on the farmstead located at 28 Durham Road.

Appendix Map Number 48

House, Townhouse Rd (ID-1385) located on Townhouse Road just south of Merigold Farm Lane intersection, Whitefield. The circa 1850-1860 Gothic Revival style house is recommended eligible for NRHP listing under A: Agriculture, Settlement/development; C: Architecture. The proposed Project abuts the northwest boundary of this parcel and is located approximately 950 feet west of the house. The current transmission lines are not visible from the house due to intervening vegetation and topography. The proposed undertaking calls for the addition of a new line with 85-foot tall transmission towers adjacent to the existing 85-foot and 75-foot tall towers within the right of way; no additional clearing of vegetation is proposed for this portion of the project area. The reconnaissance survey was performed during leaf off conditions and the existing transmission line and towers were not visible; therefore, the proposed undertaking will likely only be minimally visible and will have no adverse effect on this resource.

Appendix Map Number 55

The Rockland Branch of the Maine Central Railroad (ID-1478) crosses both the indirect and direct APE of the project area in Wiscasset. The resource is eligible for NRHP listing under criterion A: Transportation. The existing utility corridor is visible from various locations of the Rockland Branch Railroad and the proposed undertaking will also be visible; however, due to the industrial nature of the railroad crossing the project will not detract from any character defining features of the railroad crossing or its association with transportation. Where the railroad will cross the direct APE of the project area, the line has already been disturbed during the previous construction of the existing transmission line. Therefore, integrity of design, materials, and workmanship have likely already been lost in these small segments due to previous construction and reconstruction. The alterations to these small segments of the Rockland Branch railroad do not detract from the overall integrity of the railroad, nor its eligibility under Criterion A. Therefore, SEARCH recommends the project will have no adverse effect on the **Rockland Branch Railroad (ID-1478)**.

Appendix Map Number 55e

The White Family Farm (**ID-1547/MHPC# 491-0069hfs**) is located at 495 Birch Creek Road in Wiscasset, Lincoln County, approximately 0.47 miles north of its intersection with Old Ferry Road. The property straddles Birch Creek Road, with the ca. 1795 vernacular farmhouse (**ID-1494**) and connected barn (**ID-1495**), small outbuilding (**ID-1496**), and dairy barn (**ID-1497**) on the west side of Birch Creek Road while the rest of the agricultural outbuildings (**ID-1498 to ID-1501**) are on the east side. The farm was determined to be eligible for the NRHP by the MHPC in January 2011 and is noted as listed on the MHPC survey form. The White Family Farm is

eligible under criteria A: Agriculture/farming, Settlement and C: Architecture. The buildings are located approximately 200 feet southwest of the direct APE, which is adjacent to the easternmost boundary of the property on the northwest side of Birch Creek Road and also the easternmost boundary of the property on the southeast side of Birch Creek Road. The existing utility corridor contains three transmission lines with 125-foot and 75-foot tall towers, which were present prior to the farms NRHP listing. The Project calls for new lines on the existing towers and will not noticeably alter the current appearance of the existing transmission lines. Any impacts that the Project could have recommended had on the White Family Farm have already been made by the existing lines, and will not affect the setting, feeling, and association of the farmstead. As such, there will be no adverse effects from the Project on the NRHP-listed White Family Farm located at 495 Birch Creek Road in Wiscasset.

4.2 INDIRECT EFFECTS

No Adverse Effects

Appendix Map Number 2b

Lake Moxie Camp (ID-24 through ID-31), located on Troutdale Road in the Forks Plantation in central Somerset County, is eligible for NRHP listing under Criterion A for community planning and development and recreation. The camp consists of a series of cabins or camps located along the northwestern shore of Lake Moxie. The property retains integrity of setting, location, design, feeling, and association, and is an example of a local resource representing the development of recreational society coupled with northward expansion in northern New England. The period of significance for Lake Moxie Camp is 1920 through 1969, the date of the earliest cabins through the 50-year age requirement for NRHP eligibility. The proposed Project is approximately 150 feet west of Lake Moxie Camps at its closest point. The reconnaissance survey of this area was performed in late April, during leaf-off conditions, and the existing transmission line was not visible from this camp area. The proposed project calls for clearing of trees within the existing right of way for installation of new 100-foot AGL transmission towers, which may be minimally visible above the tree line from limited areas at the eastern edge of the camp. The modifications to the existing transmission corridor will not significantly alter the current setting of **Lake Moxie Camp (ID-24 through ID-31)**, nor its significant association with outdoor recreation under NRHP Criterion A. In addition, the primary viewshed from the camp is overlooking Lake Moxie to the east, facing away from the Project. Therefore, SEARCH recommends a finding of no adverse effect

Appendix Map Number 4

The **Lake Moxie/Troutdale/Baker's Station Historic District (LTBHD) (ID-1593)**, located on Lake Moxie, is a linear district that runs north/south beginning at the Moxie Dam (**ID-18**) and ending at Baker's Station (**ID-69**) to the south. The east and west boundaries are delineated by the property lines adjacent to the west side of Lake Moxie and Troutdale roads and Lake Moxie to the east. The proposed Project runs primarily west of Lake Moxie and Troutdale roads, crossing

over Troutdale Road just north of Baker's Station and continuing south. The district is defined by Moxie Pond and several streams and brooks, and characterized by dense woodlands interspersed with small seasonal residences and camps. The reconnaissance survey of this area was performed in late April, during leaf-off conditions, and the existing transmission line had very limited visibility from Troutdale Road, the primary access road, throughout most of the district. The proposed project calls for clearing of trees within the existing right of way for installation of new 100-foot above ground level (AGL) transmission towers, which will be partially visible above the tree line from limited areas. The modifications to the existing transmission corridor will not significantly alter the current setting of the historic district, nor its association with outdoor recreation under NRHP Criterion A. Therefore, SEARCH recommends a finding of no adverse effect to **Lake Moxie/Troutdale/Baker's Station Historic District (ID-1593)**.

Troutdale Station (Mosquito Station) (ID-57) on Troutdale Road in The Forks Plantation. The former train station is approximately 4.25 miles south of the Lake Moxie Road intersection; and it is about 300 feet east of the transmission corridor with dense woodlands in between. The station faces east away from the proposed project area. The reconnaissance survey of this area was performed in late April, during leaf-off conditions, and the existing transmission line was not visible from Troutdale Road at this location. The modifications to the existing transmission corridor will not significantly alter the current setting of Troutdale Station, nor its associations with the former Somerset Railroad and outdoor recreation under NRHP Criterion A or the character defining features of the station under Criterion C. Therefore, SEARCH recommends a finding of no adverse effect to **Troutdale Station/Mosquito Station (ID-57)**.

Appendix Map Number 6

The **Appalachian Trail (ID-66)** crosses the direct APE three times just south of Lake Moxie in the Town of Bald Mountain. The existing transmission line is minimally visible from various locations along the indirect APE due to the close proximity of the transmission line and dense surrounding vegetation. The Project proposes to install transmission towers that will be 100 feet (30.48 m) in height along existing transmission lines that are 45 feet (13.72 m) in height. Approximately 80 feet (24.38 m) of vegetation is proposed to be cleared along the existing transmission corridor in the segment for the installation of the new towers. Despite these alterations, viewshed data provided by TJD&A show that within the 0.5 mile (0.8 km) indirect APE, there will be no new visual impact of the project along the Appalachian Trail (See **Appendix A, Map 6**). The only new visual disturbances will be within the direct APE, as discussed in Section 4.1. The Appalachian Trail in the Lake Moxie region is a largely undeveloped landscape that features lakes, streams, mountains, and camps that have long been utilized for the enjoyment of the outdoors. The Appalachian Trail has had a visual of the existing transmission line since its construction in the 1950s, and the transmission line is a landmark noted in Trail Guides (TJD&A, 2017). The proposed project will likely not result a negative experience on the hikers that utilize this recreational corridor, as it will not be visible from any new vantage points within the indirect APE. Thus it will not have a negative effect on the Appalachian Trail's integrity of setting, feeling, or association. For these reasons, SEARCH

recommends a finding of no adverse effect of the proposed project on the Appalachian Trail. (See Section 4.1 for assessment of Direct Effects.)

Appendix Map Number 9

Culvert (ID-1289) located on Station Road west of Route 201 and south of Wyman Dam in Moscow is recommended eligible for NRHP listing under criteria A: Transportation; and C: Design. The proposed project area is approximately 500 feet west of the culvert. The culvert is located in a wooded area which screens the existing power lines from view. The proposed undertaking will likely not be visible from this location and will therefore have no adverse effect on this resource.

Appendix Map Numbers 9, 10, 10a-b, 10d-e

Bingham Village Historic District (ID-1592) includes previously surveyed resources **ID 112-135, 137-147, 149-180, 228 and 1546** and determined NRHP eligible by MHPC; and results of the 2018 survey by SEARCH to include resources **ID 181-227, and ID 229-238**. The district embodies the characteristics and feeling of a nineteenth-century industrial village. Many buildings within the district retain a high degree of architectural integrity, and as a whole, very little modern intrusions are visible. The village is historically significant under Criterion A for its commercial and industrial role in the development of Bingham in the late nineteenth to early twentieth centuries. The Project is located on the west side of the Kennebec River approximately 1,000 feet from the western boundary of the district at its closest point. There is a densely wooded buffer along the east side of the proposed project area that screens the existing transmission lines from view within the district. The proposed undertaking calls for the addition of a new transmission line with 100-foot AGL towers and the clearing of 75 feet of vegetation within the existing right of way. Based on the intervening trees and topography separating the distance, the modification to the existing utility corridor may be minimally visible above the tree line from limited areas within the district. These views would be on the periphery and not part of any of the primary viewshed within the district and will not detract from any of the character defining features of the district nor noticeably alter the setting. Therefore, the Project will have no adverse effect on **Bingham Village Historic District (ID-1592, ID 181-227, and ID 229-238)**.

The residence at 18 Rollins Street, Bingham (**ID-139 / MHPC Inventory No. 042-0070**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE adjacent to its eastern boundary on the north side of Rollins Street and is approximately 0.49 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 18 Rollins Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 15 Rollins Street, Bingham (**ID-140 / MHPC Inventory No. 042-0071**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the

indirect APE adjacent to its eastern boundary on the south side of Rollins Street and is approximately 0.48 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 15 Rollins Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 29 Owens Street, Bingham (**ID-160 / MHPC Inventory No. 042-0063**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE adjacent to its eastern boundary on the south side of Owens Street and is approximately 0.47 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 29 Owens Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

Appendix Map Number 10

The Garfield School, on Kennebec River Road approximately 600 feet north of its intersection with Jackson Pond (**ID-1269/MHPC# 534-0007**) faces west and is located within the indirect APE, approximately 0.25 miles west of the direct APE. This mid-nineteenth-century schoolhouse was determined to be eligible for listing in the NRHP in October 2013 by the MHPC under criteria A: Education and C: Architecture. Potential views from the school house are thoroughly shielded by the woods that stretch from Kennebec River Road to the existing transmission line. The schoolhouse will retain its the setting, feeling, and association of late nineteenth- to early twentieth-century rural educational development and will not be affected by the Project. Therefore, there will be no adverse effects of the Project on the Garfield School on Kennebec River Road.

Appendix Map Number 10a

The residence at 31 Baker Street, Bingham (**ID-112 / MHPC Inventory No. 042-0156**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE along its eastern boundary on the north side of Baker Street and is approximately 0.49 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 31 Baker Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 35 Baker Street, Bingham (**ID-113 / MHPC Inventory No. 042-0157**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE along its eastern boundary on the north side of Baker Street and is approximately

0.48 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 35 Baker Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 37 Baker Street, Bingham (**ID-114 / MHPC Inventory No. 042-0158**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE along its eastern boundary on the north side of Baker Street and is approximately 0.48 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 37 Baker Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 36 Baker Street, Bingham (**ID-115 / MHPC Inventory No. 042-0159**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE along its eastern boundary on the south side of Baker Street and is approximately 0.47 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 36 Baker Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 34 Baker Street, Bingham (**ID-116 / MHPC Inventory No. 042-0160**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE along its eastern boundary on the south side of Baker Street and is approximately 0.49 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 34 Baker Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 17 River Street, Bingham (**ID-117 / MHPC Inventory No. 042-0122**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE along its eastern boundary on the north side of River Street and is approximately 0.49 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 17 River Street due to the distance between it and the rolling topography of the area. Therefore,

the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 19 River Street, Bingham (**ID-118 / MHPC Inventory No. 042-0121**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the north side of River Street and is approximately 0.47 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 19 River Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 21 River Street, Bingham (**ID-119 / MHPC Inventory No. 042-0120**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the north side of River Street and is approximately 0.45 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 21 River Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 27 River Street, Bingham (**ID-120 / MHPC Inventory No. 042-0119**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the north side of River Street and is approximately 0.44 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 27 River Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 28 River Street, Bingham (**ID-121 / MHPC Inventory No. 042-0118**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the south side of River Street and is approximately 0.41 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 28 River Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 30 River Street, Bingham (**ID-122 / MHPC Inventory No. 042-0117**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the south side of River Street and is approximately 0.43 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 30 River Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 20 River Street, Bingham (**ID-123 / MHPC Inventory No. 042-0116**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the south side of River Street and is approximately 0.45 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 20 River Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 18 River Street, Bingham (**ID-124 / MHPC Inventory No. 042-0115**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE along its eastern boundary on the south side of River Street and is approximately 0.47 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 18 River Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 14 River Street, Bingham (**ID-125 / MHPC Inventory No. 042-0114**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE along its eastern boundary on the south side of River Street and is approximately 0.49 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 14 River Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

Appendix Map Number 10b

The residence and connected barn (**ID-126 / MHPC Inventory No. 042-0082 and ID-127 / MHPC Inventory No. 042-0082a**) located at 300 Main Street / Route 201 in Bingham faces east, away from the Project. The structures are contributing elements to the NRHP-eligible Bingham Village

Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE along its eastern boundary on the west side of Main Street / Route 201 and are approximately 0.49 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 300 Main Street / Route 201 due to the distance between them and the rolling topography of the area. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence at 17 Dinsmore Street, Bingham (**ID-128 / MHPC Inventory No. 042-0081**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the north side of Dinsmore Street and is approximately 0.42 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 17 Dinsmore Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 23 Dinsmore Street, Bingham (**ID-129 / MHPC Inventory No. 042-0080**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the north side of Dinsmore Street and is approximately 0.40 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 23 Dinsmore Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 25 Dinsmore Street, Bingham (**ID-130 / MHPC Inventory No. 042-0079**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the north side of Dinsmore Street and is approximately 0.38 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 25 Dinsmore Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 20 Dinsmore Street, Bingham (**ID-131 / MHPC Inventory No. 042-0078**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the south side of Dinsmore Street and is approximately 0.37 miles northeast of the Project's direct APE, which is on the west side of the

Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 20 Dinsmore Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 18 Dinsmore Street, Bingham (**ID-132 / MHPC Inventory No. 042-0077**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the south side of Dinsmore Street and is approximately 0.42 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 18 Dinsmore Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The Bingham Union Library (**ID-133 / MHPC Inventory No. 042-0075**) located at 297 Main Street / Route 201 in Bingham, faces west. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE along its eastern boundary on the south side of Dinsmore Street and is approximately 0.49 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 297 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence and connected barn (**ID-134 / MHPC Inventory No. 042-0074 and ID-180 / MHPC Inventory No. 042-0074a**) located at 295 Main Street / Route 201 in Bingham faces west. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE near its eastern boundary on the east side of Main Street / Route 201 and are approximately 0.47 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 295 Main Street / Route 201 due to the distance between them and the rolling topography of the area. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence and connected barn (**ID-135 / MHPC Inventory No. 042-0073 and ID-179 / MHPC Inventory No. 042-0073a**) located at 291 Main Street / Route 201 in Bingham faces west. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE near its eastern boundary on the east side of Main Street / Route 201 and are approximately 0.46 miles northeast of the Project's direct APE, which is on the west side of the

Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 291 Main Street / Route 201 due to the distance between them and the rolling topography of the area. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence at 289 Main Street / Route 201, Bingham (**ID-137 / MHPC Inventory No. 042-0072**) faces west. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the northeast corner of Main Street / Route 201 and Rollins Street and is approximately 0.44 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 289 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 286 Main Street / Route 201, Bingham (**ID-138 / MHPC Inventory No. 042-0076**) faces east. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the west side of Main Street / Route 201 is approximately 0.43 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 286 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 279 Main Street / Route 201, Bingham (**ID-141 / MHPC Inventory No. 042-0054**) faces west. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the southeast corner of Main Street / Route 201 and Rollins Street and is approximately 0.43 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 279 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence and connected barn (**ID-178 / MHPC Inventory No. 042-0055 and ID-142 / MHPC Inventory No. 042-0055a**) located at 277 Main Street / Route 201 in Bingham faces west. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE near its eastern boundary on the east side of Main Street / Route 201 and are

approximately 0.43 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 277 Main Street / Route 201 due to the distance between them and the rolling topography of the area. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence at 136 Lander Street, Bingham (**ID-143 / MHPC Inventory No. 042-0053**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the north side of Lander Street and is approximately 0.36 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 136 Lander Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 114-116 Lander Street, Bingham (**ID-144 / MHPC Inventory No. 042-0052**) faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the south side of Lander Street and is approximately 0.35 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 114-116 Lander Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence and connected barn (**ID-146 / MHPC Inventory No. 042-0050 and ID-173 / MHPC Inventory No. 042-0050a**) located at 268 Main Street / Route 201 in Bingham faces east. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE near its eastern boundary on the west side of Main Street / Route 201 and are approximately 0.37 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 268 Main Street / Route 201 due to the distance between them and the rolling topography of the area. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

Appendix Map Number 10d

The residence at 269 Main Street / Route 201, Bingham (**ID-145 / MHPC Inventory No. 042-0056**) faces west. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the east side of Main Street / Route 201 and is

approximately 0.40 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 269 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 266 Main Street / Route 201, Bingham (**ID-147 / MHPC Inventory No. 042-0049**) faces east. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the west side of Main Street / Route 201 and is approximately 0.37 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 266 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence and connected barn (**ID-174 / MHPC Inventory No. 042-0048 and ID-149 / MHPC Inventory No. 042-0048a**) located at 262 Main Street / Route 201 in Bingham faces east. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE near its eastern boundary on the west side of Main Street / Route 201 and are approximately 0.36 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 262 Main Street / Route 201 due to the distance between them and the rolling topography of the area. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence and connected barn (**ID-175 / MHPC Inventory No. 042-0047 and ID-150 / MHPC Inventory No. 042-0047a**) located at 258 Main Street / Route 201 in Bingham faces east. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE near its eastern boundary on the west side of Main Street / Route 201 and are approximately 0.35 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 258 Main Street / Route 201 due to the distance between them and the rolling topography of the area. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence and connected barn (**ID-176 / MHPC Inventory No. 042-0046 and ID-151 / MHPC Inventory No. 042-0046a**) located at 256 Main Street / Route 201 in Bingham faces east. The

structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE near its eastern boundary on the west side of Main Street / Route 201 and are approximately 0.35 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 256 Main Street / Route 201 due to the distance between them and the rolling topography of the area. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence at 252 Main Street / Route 201, Bingham **(ID-152 / MHPC Inventory No. 042-0045)** faces east. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the west side of Main Street / Route 201 and is approximately 0.35 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 252 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 261 Main Street / Route 201, Bingham **(ID-153 / MHPC Inventory No. 042-0057)** faces west. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the east side of Main Street / Route 201 and is approximately 0.39 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 261 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 259 Main Street / Route 201, Bingham **(ID-154 / MHPC Inventory No. 042-0058)** faces west. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the northeast corner of Main Street / Route 201 and Owens Street and is approximately 0.39 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 259 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 6 Owens Street, Bingham (**ID-155 / MHPC Inventory No. 042-0059**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the north side of Owens Street and is approximately 0.40 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 6 Owens Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence and connected barn (**ID-157 / MHPC Inventory No. 042-0060 and ID-156 / MHPC Inventory No. 042-0060a**) at 10 Owens Street, Bingham faces south. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE near its eastern boundary on the north side of Owens Street and is approximately 0.42 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 10 Owens Street due to the distance between them and the rolling topography of the area. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence at 16 Owens Street, Bingham (**ID-158 / MHPC Inventory No. 042-0061**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the north side of Owens Street and is approximately 0.44 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 16 Owens Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 20 Owens Street, Bingham (**ID-159 / MHPC Inventory No. 042-0062**) faces south. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the north side of Owens Street and is approximately 0.46 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 20 Owens Street due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 251 Main Street / Route 201, Bingham (**ID-161 / MHPC Inventory No. 042-0044**) faces west. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the southeast corner of Main Street / Route 201 and Owens Street and is approximately 0.38 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 251 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence at 249 Main Street / Route 201, Bingham (**ID-162 / MHPC Inventory No. 042-0043**) faces west. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE near its eastern boundary on the east side of Main Street / Route 201 and is approximately 0.37 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 249 Main Street / Route 201 due to the distance between it and the rolling topography of the area. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

Appendix Map Number 10e

The residence and connected barn (**ID-177 / MHPC Inventory No. 042-0042 and ID-163 / MHPC Inventory No. 042-0042a**) at 244 Main Street / Route 201 in Bingham faces east. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE on the west side of Main Street / Route 201 and are approximately 0.32 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 244 Main Street / Route 201 due to the distance between them and the rolling topography of the area. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The Bingham Free Meeting House (**ID-164 / MHPC Inventory No. 042-0018 / NRHP Reference No. 76000113**) is located on Old Church Road on the northwest corner of where it meets Main Street / Route 201 in Bingham and faces south. It is individually listed on the National Register of Historic Places in 1976 under criteria A for associations with religion and C architecture; and is a contributing element to the NRHP-eligible Bingham Village Historic District. It is situated within the indirect APE, approximately 0.30 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from the NRHP-listed Bingham Free Meeting House due to the distance between them and the rolling topography of the area. Therefore, the Project would

have no adverse effect on the NHRP-listed property located at the intersection of Old Church Road and Main Street / Route 201.

The residence and connected barn (**ID-165 / MHPC Inventory No. 042-0041 and ID-166 / MHPC Inventory No. 042-0041a**) at 9 Old Church Road in Bingham is situated on the north side of the road and faces south. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE on the west side of Main Street / Route 201 and are approximately 0.28 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 9 Old Church Road due to the distance between it, the rolling topography of the area, and the trees that line the banks of the river naturally blocking the view of the other side. Therefore, the Project would have no adverse effect on these contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence at 16 Old Church Road (**ID-167 / MHPC Inventory No. 042-0018**) at 9 Old Church Road in Bingham is situated on the south side of the road where it turns north and faces north. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. It is within the indirect APE on the west side of Main Street / Route 201 and is adjacent to the Kennebec River. The residence is approximately 0.25 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 16 Old Church Road due to the distance between it, the rolling topography of the area, and the trees that line the banks of the river naturally blocking the view of the other side. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence and connected barn (**ID-168 / MHPC Inventory No. 042-0008 and ID-169 / MHPC Inventory No. 042-0008a**) at 227 River Road / Route 201 in Bingham is situated on the east side of the road and faces west. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE on the west side of Main Street / Route 201 and are approximately 0.32 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 227 River Road / Route 201 due to the distance between them, the rolling topography of the area, and the trees that line the banks of the river naturally blocking the view of the other side. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence at 223 Main Street / Route 201, Bingham (**ID-170 / MHPC Inventory No. 042-0203**) faces west. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE on the east side of Main Street / Route 201 and is approximately 0.31 miles

northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 223 Main Street / Route 201 due to the distance between them, the rolling topography of the area, and the trees that line the banks of the river naturally blocking the view of the other side. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

The residence and connected barn (**ID-172 / MHPC Inventory No. 042-0202 and ID-171 / MHPC Inventory No. 042-0202a**) at 219 Main Street / Route 201 in Bingham is situated on the east side of the road and facing west. The structures are contributing elements to the NRHP-eligible Bingham Village Historic District and were determined to be individually eligible by the MHPC in 2013. They are within the indirect APE on the west side of Main Street / Route 201 and are approximately 0.31 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 219 Main Street / Route 201 due to the distance between them, the rolling topography of the area, and the trees that line the banks of the river naturally blocking the view of the other side. Therefore, the Project would have no adverse effect on these resources either individually or as contributing elements to the NRHP-eligible Bingham Village Historic District.

The residence at 226 Main Street / Route 201, Bingham (**ID-1546 / MHPC Inventory No. 042-0201**) faces east. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE on the west side of Main Street / Route 201 and is approximately 0.29 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with woods acting as a buffer between it and the river. The Project will not be visible from 226 Main Street / Route 201 due to the distance between them, the rolling topography of the area, and the trees that line the banks of the river naturally blocking the view of the other side. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

Appendix Map Number 10f

The farmstead (**ID-1544/MHPC# 534-0012hfs**) located at 259 Kennebec River Road/Route 16 in Concord Township faces west and is within the indirect APE to the west of the direct APE. This connected house and barn complex (**ID-1279/MHPC# 534-0012, ID-1280/MHPC# 534-0013, and ID-1281/MHPC# 534-0012a**) was determined to be eligible for listing in the NRHP in October 2013 by the MHPC under criteria A: Agriculture/farming development and C: Architecture. Potential views from the farmstead will be screened by the residences across the street to the west, as well as mature trees currently blocking the view of the existing transmission line. The setting, feeling, and association of this late-nineteenth century farmstead will not be affected by the Project due to the limited views above the tree line (if visible). Therefore, there will be no adverse effects of the Project on the farmstead at 259 Kennebec River Road/Route 16.

Appendix Map Number 10g

The Riverside Inn, a former residence located at 172 River Road / Route 201 on the southern outskirts of Bingham (**ID-228 / MHPC Inventory No. 042-0016**) faces east. The structure is a contributing element to the NRHP-eligible Bingham Village Historic District and was determined to be individually eligible by the MHPC in 2013. It is within the indirect APE on the west side of Main Street / Route 201 immediately adjacent to the Kennebec River, and is approximately 0.28 miles northeast of the Project's direct APE, which is on the west side of the Kennebec River with trees along both banks of the river acting as a buffer between the resource and the Project. The Project will not be visible from 172 River Road / Route 201 due to the distance between them, the rolling topography of the area, and the trees that line the banks of the river naturally blocking the view of the other side. Therefore, the Project would have no adverse effect on this resource either individually or as a contributing element to the NRHP-eligible Bingham Village Historic District.

Appendix Map Number 11

Concord Haven (ID-1259/MHPC# 92001297), is a historic district that was listed in the NRHP in 1992. The property includes two contributing buildings and one contributing object. The property is listed under Criterion B for its association with Dr. Leon Williams, and Criterion C for its Colonial Revival architecture (designed by John Calvin Stevens and John Howard). The period of significance is 1915-1932. In addition to the house, the 50- acre property contains a carriage barn and a lily pond with a fountain and statue of Dr. Williams's daughter. Both the barn and pond are considered contributing elements to the property. The property sits on the east side of Kennebec River Road and the Kennebec River is the east boundary of the property. Kennebec River Road is approximately 420 yards east of the existing utility corridor, and there is dense foliage between the road and the corridor. The house and associated buildings are an additional 100 yards east of the road with more heavy foliage in between that completely obscures views toward the project area. The project area is not visible from the NRHP-listed Concord Haven Historic District (**ID-1259/MHPC #92001297**), and the proposed project will have no adverse effect on the property.

Appendix Map Number 12

The concrete over steel girder **Robert Garland Bridge (#2615), (ID-1174)** on N. Main Street over the Carrabassett River in Anson is eligible for NRHP listing under Criterion A for transportation development. The bridge is located approximately 0.47 miles west of the Project area, and the proposed undertaking will be visible from this location due to separating distance and intervening development. The resource will retain its integrity of setting, feeling, and association. Therefore, SEARCH recommends a finding of no adverse effect of the Project on the eligible resource.

327 Fahi Pond Road (ID-1251 and ID-1252), is an NRHP eligible farmstead located on the east side of Fahi Pond Road north of the town of North Anson. The property is eligible for inclusion in the NRHP under both Criterion A and C, and has high integrity under all seven aspects. In this area, the project will include improvements to the existing utility corridor, which has been

present since at least 1957. At its closest point, the utility corridor is located 300 yards east of the plowed fields associated with the house and barn. The barn is nearly 800 yards from the edge of the project area. There is heavy foliage in the 300 yards between the edge of the field and the extent of the project area, which blocks all views between the project area and resource. Due to obscured views and overall distance between the resource and the project area, the proposed project will have no adverse effect on **327 Fahi Pond Road (ID-1251 and ID-1252)**.

Appendix Map Number 12d

The **Temples Historic District (ID-1597/ NRHP# 83000474)** includes four NRHP-listed single-family residences in the Greek Revival style (**ID-1192/ NRHP# 83000474**, **ID-1205/ NRHP# 83000474**, **ID-1206/ NRHP# 83000474**, and **ID-1207 / NRHP# 83000474**), two detached barns (**ID-1203 /NRHP# 83000474** and **ID-1204 / NRHP# 83000474**), and one attached barn (**ID-1208 / NRHP# 83000474**), all located on Madison Street in Anson facing north. It is 0.50 miles west of the project area. It was determined eligible by MHPC in 1975 and listed in the NRHP in May 1983 under criterion C architecture. The contributing resources to the NRHP-listed district all face north, away from the Project. Due to separating distance the Project will be barely visible (if at all) as one looks west along Madison Street; therefore, the historic district will retain its integrity of setting, feeling and association. There will be no adverse effects of the Project on the NRHP-listed Temples Historic District.

Appendix Map Number 13/13a

The Cape Code residence with Greek Revival elements and vernacular barn (**ID-1159 and 1160**) located at 905 River Road in Anson sits on a hill with the Carrabassett River to its north and east, although the home itself faces south with River Road to its west. The property is recommended eligible for NRHP listing under criteria A: Agriculture/farming development; and C: Architecture. The structures are located within the indirect APE, approximately 0.36 miles west of the direct APE. Any potential visual impacts from the Project will be shielded by the trees between the home and the direct APE. Because of this, the Project will not affect the complex's setting, feeling or association; there will be no adverse effect to the property by the Project.

The residence at the corner of Union Street and River Road (**ID-1161**) in Anson is approximately 0.40 miles west of the direct APE, in the indirect APE near the western boundary. The property is recommended eligible for NRHP listing under criteria A: Agriculture/farming development; and C: Architecture. The resource faces south, away from the Project, and the property is surrounded by mature vegetation on the south and east further obscuring the project area from view. The resource will retain its integrity of setting, feeling and association. There will be no adverse effects of the Project on the eligible resource.

The single-family residence with a connected barn at 26 Union Street (**ID-1169 and ID-1170**) in Anson is approximately 0.50 miles west of the direct APE, in the indirect APE near the western boundary. The property is recommended eligible for NRHP listing under criteria A: Agriculture/farming development; and C: Architecture. The resource faces north, away from

the Project. Potential visual impacts from the Project will be screened by trees and intervening development. The eligible resource will retain its integrity of setting, feeling and association. Due to the separating distance and vegetative buffer, the Project will have no adverse effects on the eligible resources.

Appendix Map Number 14a

The farmhouse and connected barn (**ID-1119 and ID-1120**) located at the end of Ward Street on the northern outskirts of Anson is situated 0.25 miles west of the Kennebec River. The property is recommended eligible for NRHP listing under criteria A: Agriculture, settlement/development; and C: Architecture. It is with the indirect APE, approximately 0.11 miles east of the direct APE. Visual impacts will be reduced due to the distance between the farmhouse and the direct APE, the rolling topography of the area, and the fact that the complex faces away from the direct APE. The Project will not affect the complex's setting, feeling or association; there will be no adverse effect to the property by the Project.

Appendix Map Number 14b

The Queen Anne residence (**ID-1117**) located at 77 Preble Avenue in Anson is situated within the indirect APE, approximately 0.25 miles west of the direct APE. The property is recommended eligible for NRHP listing under criteria A: Community development; and C: Architecture. The Kennebec River is 0.16 miles to the east. Because of the distance between the direct APE and the residence in addition to the area's rolling topography and the curvature of the road, the Project will not be visible from the home and there will be no visual impacts. The Project will not affect the setting, feeling, and association of the Queen Anne at 77 Preble Avenue in Anson, hence there will be no adverse effects on the property.

Appendix Map Number 14g

Spencer's Service Station (ID-1060) located at 149 Main Street, Anson. Recommended eligible for NRHP listing under criteria A: Community development, Transportation; B: Person; and C: design/architecture. The proposed project area is located approximately 1,725 feet west of the station. Due to intervening trees and development combined with the separating distance, the existing utility corridor is not visible from this location. The proposed undertaking calls for the addition of 100-foot AGL transmission towers, which likely will not be visible from this location; if minimally visible the project will not detract from the service station's character defining features or associations with transportation and development and will have no adverse effect.

Appendix Map Number 15

The Athearn Cemetery (**ID-1034**) is located on the west side of Starks Road just north of the Anson – Starks Town Line in Somerset County, in the area known locally as Five Corners. The cemetery was included in a prior survey (Project ID 0901-11) that was completed in July 2011, but it has not been reviewed by the MHPC. Recommended eligible for NRHP listing under criteria A: Settlement; B: Person; and C: Architecture. The cemetery is within the indirect APE, approximately 0.15 miles north of the direct APE where is oriented northeast – southwest, and 0.08 miles west of the direct APE when it turns north after crossing Starks Road. Potential visual impacts from the Project to the south is buffered by an existing farmstead adjacent to the

cemetery and the fact that the existing transmission line sits lower than the cemetery due to the topography. Any visual impact to the east will be shielded from the existing wooded parcel on the other side of Starks Road. The Project will not affect the setting, feeling, and association of the Athearn Cemetery in Anson, and there will be no adverse effects on the property.

Mrs. Athearn's House (**ID-1035**) is a ca. 1860 vernacular residence with Greek Revival elements that is situated on the west side of Starks Road in the Five Corners area of Anson. It is immediately north of the Athearn Cemetery, also believed to be established around ca. 1860. The house was included in a prior survey (Project ID 0901-11) that was completed in July 2011, but it has not been reviewed by the MHPC. Recommended eligible for NRHP listing under criteria A: Settlement and C: Architecture, the house is within the indirect APE, approximately 0.29 miles north of the direct APE where it is oriented northeast – southwest, and 0.19 miles west of the direct APE when it turns north after crossing Starks Road. Potential visual impacts from the Project to the south is buffered by an existing farmstead adjacent to the cemetery and the fact that the existing transmission line sits lower than the cemetery due to the topography. Any visual impact to the east will be shielded from the existing wooded parcel on the other side of Starks Road. The Project will not affect the setting, feeling, and association of Mrs. Athearn's House in Anson, and there will be no adverse effects on the property.

Appendix Map Number 18

The **connected farmhouse on Shaw Hill Road (ID-1003/ID-1004)** in Industry is approximately 1,200 feet northwest of the project corridor. The property is recommended eligible for listing on the NRHP under criteria A: Agriculture, settlement/development; C: Architecture. The intervening distance includes Shaw Hill Road and dense hardwood forest. The Project at this location consists of upgrading existing infrastructure. The existing infrastructure is only minimally visible to or from the property and no other indirect effects are anticipated given the distance. Therefore, SEARCH recommends the project would have no adverse on the connected farmhouse on Shaw Hill Road (ID-1003/ID-1004).

Appendix Map Number 20

The **Bailey Hill Dairy Farm (ID-1518)** is located at 639 Bailey Hill Road and 389 Davis Road on the western fringes of Farmington and faces north. The property is recommended eligible for NRHP listing under criteria A: Agriculture/farming; B: Person; and C: Architecture. It is within the indirect APE and is approximately 0.23 miles due south of the direct APE on Bailey Hill road and 0.23 miles east of it on Davis Road. The farmstead is composed of the connected farmhouse (**ID-976**) and two detached barns (**ID-975 and ID-977**) on Bailey Hill Road and a house (**ID-956**) at 389 Davis Road. Mature trees and rolling terrain block the potential view of the Project from the late-eighteenth to mid-twentieth century farmstead, which allows it to retain its integrity of setting, feeling, and association. As such, there will be no adverse effects from the Project on the Bailey Hill Dairy Farm.

The farmstead (**ID-969**) located at 513-520 Davis Road and 602 Bailey Hill Road is located north of Bailey Hill Road looking south and is recommended eligible for NRHP listing under A: Agriculture/farming; B: Person; C: Architecture. Both parcels are currently under the same

ownership and are adjacent to each other. The Davis Road farm is comprised of the farmhouse (**ID-970**), a detached barn (**ID-971**), and a silo (**ID-972**). It is in the indirect APE, approximately 0.12 miles northwest of the direct APE. Potential views of the Project from the Davis Road farm will be screened by mature trees and the rolling topography of the area. The Project will not affect the Davis Road farm's setting, feeling, and association and will have no adverse effects on that portion of the farmstead.

Appendix Map Number 20a

The Henry Hardy Farm (ID-1517/MHPC# 154-0192hfs) is located at 360 Weeks Mills Road in Farmington facing south. It is 0.38 miles west of the direct APE, in the indirect APE near its western boundary. It was determined to be eligible for the NRHP by MHPC in 2015 under criteria A: Agriculture/farming; B: Person; and C: Architecture. The farmstead is comprised of the farmhouse (**ID-979**), three detached dairy barns (**ID-980/MHPC# 154-0192c**, **ID-981/MHPC# 154-0192b**, and **ID-982 / MHPC# 154-0192a**), a small detached outbuilding (**ID-983/MHPC# 154-0192d**), and a detached garage (**ID-984 / MHPC# 154-0193**). The farmhouse faces south, towards the Project which is blocked from view by a large swath of woods. The complex will retain its integrity of setting, feeling, and association. There will be no adverse effects of the Project on the NRHP-eligible Henry Hardy Farm.

Appendix Map Number 21

The Moses Chandler House/The Farmington Conference Center (ID-904) is located at 216 Whittier Road in Farmington, on the north side of the road, and faces south. It is on the western side of the Sandy River in the Project's indirect APE; the direct APE is approximately 0.25 miles southeast. It is significant under criteria A: Community development, B: Person with ties to early settler Moses Chandler, and C: Architecture as an intact example of late-eighteenth to mid-nineteenth century agricultural architecture. Potential views of the Project from the late-nineteenth century farmhouse are blocked by mature trees, the curvature of Whittier Road, and the gently rolling topography of the area. The Project will not impact the integrity of the farmhouse's setting, feeling, and association, and as such, there will be no adverse effects of the Project on the Farmington Fairgrounds.

Goodtimes Unlimited RV Sales and Service, an early to mid-nineteenth century side-hall farmhouse, (**ID-927**) is located at 372 Farmington Falls Road on the southern outskirts of Farmington and faces south. The property is recommended eligible for NRHP listing under criteria A: Community development and C: architecture. It is located directly adjacent to the direct APE but is fully within the indirect APE. A small number of mature trees will act as a buffer between the Project and the farmhouse close to the road. Because the property is significant for its transformation from a farmstead to modern commercial, the addition of the Project within the adjacent pre-existing utility corridor will not impact the integrity of the farmhouse's setting, feeling, and association. Therefore, there will be no adverse effects of the Project on the farmhouse that currently serves as the office of Goodtimes Unlimited RV Sales and Service at 372 Farmington Falls Road.

The **Farmington Fairgrounds (ID-948)** is located at 292 High Street in the town of Farmington. The southern portion of the fairgrounds are within the indirect APE, which puts the direct APE approximately 0.33 miles southeast of the fairgrounds. The fairgrounds are significant under criteria A: Community development and C: design/construction for their ties to the development of the community, social history, and entertainment/recreation as well as the design/construction of the historic-age structures. Any potential views of the Project from the fairgrounds are blocked by the Farmington Public Works and wooded areas. The Project will not impact the integrity of the farmhouse's setting, feeling, and association, and as such, there will be no adverse effects of the Project on the Farmington Fairgrounds.

Appendix Map Number 21a

The **farmstead at 293 Farmington Falls Road (ID-1520)** is located on the southern outskirts of Farmington faces northeast and is in the indirect APE; the direct APE is approximately 0.25 miles to the east. The complex is comprised of the Greek Revival farmhouse (**ID-918**), a detached barn (**ID-920**), a detached arched roof barn (**ID-921**), and a dairy barn (**ID-922**) and is recommended eligible for NRHP listing under criteria A: agriculture/farming and C: architecture. Potential views from the farmstead of the Project are blocked by mature trees and the curvature of Farmington Falls Road. The farmstead's integrity of setting, feeling, and association will not be affected by the Project. Therefore, there will be no adverse effects of the Project on the farmstead located at 293 Farmington Falls Road.

Appendix Map Number 21b

The **farmstead at 414 Farmington Falls Road (ID-1524)** is situated on the north side of the road and faces south. It is comprised of a detached small farmhouse (**ID-930**), a connected Gothic Revival farmhouse (**ID-931**), a connected farm (**ID-932**), and a connected dairy barn (**ID-919**) and is recommended eligible for NRHP listing under Criterion A in the area of agriculture and Criterion C for architecture as an intact local example of a connected early nineteenth-century farmstead. The farmstead is within the indirect APE and is approximately 0.25 miles southeast of the direct APE. Potential views of the Project from the farmstead are blocked by mature trees and the curvature of Farmington Falls Road. The Project will not impact the integrity of the farmhouse's setting, feeling, and association. Therefore, there will be no adverse effects of the Project on the farmstead at 414 Farmington Falls Road.

Appendix Map Number 22

348 McCrillis Corner Rd (ID-874), in Wilton is a barn located on the north side of McCrillis Corner Road approximately 0.45 miles east of the Project. It is recommended eligible for NRHP listing under Criterion A for Agriculture and under Criterion C as a representative local example of a bank barn. There is a wooded area between the barn and the existing utility corridor screening it from view. Due to separating distance and the intervening vegetative buffer, the proposed undertaking will not be visible from this resource; therefore, the Project will have no adverse effect on **348 McCrillis Corner Rd (ID-874)**.

Appendix Map Number 25

The **connected farmhouse at 104 Belanger Road (ID-846, ID-847)** in Jay, Franklin County is recommended eligible for NRHP listing for significance under Criterion C as an example of a late nineteenth century vernacular connected farmhouse. The Project is located approximately 1,780 feet west of the structures and is screened from view by dense woodlands. The existing transmission line is not visible from this location. The proposed project calls for the addition of a new transmission line with 100-foot tall towers adjacent to the west of the existing line, which has 45-foot tall towers. Although substantially taller towers are proposed, the Project will likely not be visible from this location due to separating distance and the large vegetative buffer. The Project will not detract from any of the resource's character defining features making it eligible for NRHP listing; therefore, there will be no adverse effect on the connected farmhouse **(ID-846, ID-847)**.

Appendix Map Number 27

Pleasant Hill Cemetery **(ID-779/MHPC# 249-0032)** is located at the intersection of Fayette Road and Pomeroy Hill Road in Livermore Falls. It is located within the indirect APE, approximately 600 feet west of the direct APE. The cemetery was determined to be eligible for the NRHP by the MHPC in June 2009 under criteria A: Settlement and Development and C; Architecture. Visual impacts of the Project on the cemetery will be shielded by trees, so there will be no visual effects on the cemetery by the Project. The Project will not affect the setting, feeling, and association of the complex, therefore there will be no adverse effects of the Project to the Pleasant Hill Cemetery.

Appendix Map Number 27b

The Souther Family Farm **(ID-1515)** is located in Livermore Falls, on Souther Road, approximately 0.25 miles north of its intersection with Fayette Road. The farmstead is situated along the eastern edge of the indirect APE, 0.45 miles west of the direct APE. The farmstead is recommended eligible for NRHP listing under criteria A: agriculture/farming; C: architecture. It is comprised of a vernacular farmhouse **(ID-788)** and six barns **(ID-789 to ID-794)**. Any visual impacts from the Project are shielded by the rolling topography of the region and approximately 0.25 miles of forested land. Because of the distance between the farmstead and the Project, there will be no effect on its integrity of setting, feeling and association. Therefore, there will be no adverse effect of the Project on the Souther Family Farm on Southern Road.

Appendix Map Number 28

The **residence at 810 Park Street (ID-738)** located in Livermore Falls is within the indirect APE, approximately 0.25 miles east of the direct APE. The residence is recommended eligible for NRHP listing under criterion C: architecture. Potential views of the Project from the late nineteenth century Queen Anne home are blocked by mature trees and the rolling topography of the area. The residence's integrity of setting, feeling, and association will not be affected by the Project. Therefore, there will be no adverse effects of the Project on the residence located at 810 Park Street.

Appendix Map Number 28b

Haines Corner Cemetery (ID-736) located on Park Street/Rte 133 in Livermore Falls approximately 150 feet north of Haines Corner Road. Recommended eligible for NRHP listing under Criteria A: Settlement patterns; and C: Design. The proposed undertaking is located approximately 1460 feet west of the cemetery. Due to intervening woodlands the proposed undertaking will not be visible from this location; therefore, the proposed project will have no adverse effects on this resource.

Appendix Map Number 29

The **New Norland Grange Hall #580 (ID-716/MHPC# 249-0044)** is located at the intersection of River Road and Androscoggin Bluff, in Livermore Falls, on the west side of River Road and south of Androscoggin Bluff. The building was determined to be eligible for the NRHP by the MHPC in April 2014 under criteria A: Social History and C: Architecture. The building is within the indirect APE, approximately 100 feet east of the direct APE. Despite this, visual impacts from the Project will be shielded by a buffer of trees. There will be no effect on its integrity of setting, feeling, and association. Therefore, there will be no adverse effects of the Project on the New Norland Grange Hall #580.

Appendix Map Number 30

The single-family residence at 197 Campbell Road (**ID-686**) located in Leeds is a newly recorded resource that has not been previously reviewed by the MCHP, but was recommended eligible by SEARCH during the current survey under criteria A: Early settlement and development; and C: Architecture. The resource is located 0.44 miles west of the direct APE, within the indirect APE and approximately 0.06 miles from the western edge of the indirect APE boundary. The resource faces southwest, away from the proposed project, and the property is surrounded by mature vegetation on all sides and further to the east beyond a pasture obscuring the project area from view. The eligible resource will retain its integrity of setting, feeling and association. There will be no adverse effects of the project on the eligible resource.

The single-family residence (**ID-692**) located on Dawns Way in Leeds is associated with Barker Farm and eligible for the National Register under Criterion A for agriculture and farming development. The resource is located approximately 0.57 miles east of the direct APE, within the indirect APE towards the eastern boundary, and faces west. To the west of the resource, residential and agricultural development and mature trees largely obscure the view to and from the project area in that direction. Therefore, the resource will retain its integrity of setting, feeling, and association and there will be no adverse effects of the Project on the eligible resource.

The barn (**ID-693**) located on Dawns Way in Leeds is associated with Barker Farm and is eligible for the National Register under Criterion A for agriculture and farming development. The resource is located approximately 0.59 miles east of the direct APE, within the indirect APE towards the eastern boundary, and faces east away from the Project area. To the west of the resource, residential and agricultural developments and mature trees further obscure the view to and from the project area in that direction. Therefore, the resource will retain its integrity of

setting, feeling, and association and there will be no adverse effects of the Project on the eligible resource

The **farmhouse and barn at 189 Strickland Loop (ID-704 and ID-705)** located in Livermore Falls, is west of the direct APE approximately 230 feet and is within the indirect APE. The complex consists of the vernacular farmhouse and barn and was a mill or similar industrial site in the past. The farmhouse faces south, with the existing transmission line to the east; Strickland Loop, a pasture, and a wooded area acts as a visual buffer between the complex and the transmission line. Although the proposed right-of-way will bring the new transmission line closer, the existing trees should continue to act as a buffer. The Project will not affect the setting, feeling, and association of the complex, therefore there will be no adverse effects of the Project to the farmhouse and barn located at 189 Strickland Loop.

Appendix Map Number 30a

Barker Farm (ID-1516) is located on Barker Road in Leeds and five barns and outbuildings (**ID-694, ID-695, ID-696, ID-697, and ID-698**). The mid-nineteenth century farmstead is eligible for the National Register of Historic Places under Criterion A for agriculture and farming, and is located approximately 0.40 miles east of the direct APE, within the indirect APE towards the eastern boundary. The resources largely face west towards Barker Road and the Project area. To the west of the property, elevated topography, existing development and mature vegetation obscure the view to and from the project area in that direction. Therefore, the resource will retain its integrity of setting, feeling, and association and there will be no adverse effects of the Project on the eligible resource.

Appendix Map Number 31

The unnamed farmstead (**ID-1514**) is located at 129 Fish Street in Leeds and includes a single-family residence (**ID-665**) and a barn (**ID-666**). The mid-nineteenth century farmstead is eligible for the National Register of Historic Places under Criterion A for agriculture and farming and is located approximately 0.10 miles west of the direct APE, within the indirect APE towards the western boundary. The resources face east directly towards the Project area. The parcel situated to the east of the farmstead, between Fish street and the Project area, is partially cleared on the western edge of the parcel. The eastern edge adjacent to the Project area consists of mature vegetation but it slopes downward to the Project area providing little in the way of a visual buffer from the eligible farmstead. The proposed improvements may be minimally visible from select areas of the farmstead but, due to limited visibility of the project area and separating distance combined with the presence of the existing transmission lines, the proposed project will not significantly alter the viewshed; therefore, the project have no adverse effect on the eligible resource.

The former schoolhouse (**ID-677**) converted to a garage, located on Campbell Road 500 feet north of Route 219 in Leeds, is recommended eligible for listing under Criterion A: Early settlement and development; Education. The resource faces south and is bordered by woods on the north side and a tree line on the west side. The reconnaissance survey was performed during leaf off conditions and the existing transmission lines were note visible from this

resource. The proposed project calls for the addition of 100-foot tall transmission towers, which may be partially visible above the tree line. The primary view of the former schoolhouse is looking to the north, placing the Project in the periphery. Due to the limited visibility (if visible at all) of the Project, it will not detract from the resource's associations with early settlement or education, nor from the setting or feeling. Therefore, the Project will have no adverse effect on this resource.

Appendix Map Number 32

Fairview Farm (ID-1513) is located at 530 Fish Street in Leeds and includes a single-family residence (**ID-659**) and a dairy barn (**ID-660**). The farmstead is eligible for the National Register of Historic Places under Criterion A for agriculture and farming and is located approximately 0.25 miles east of the direct APE, within the indirect APE towards the eastern boundary. The western edge of the property is lined with trees. The parcel directly to the west of the farmstead, across Fish Street, is covered with mature vegetation and trees that further obscures the Project area from the eligible resource. Therefore, the resource will retain its integrity of setting, feeling, and association and there will be no adverse effects of the Project on the eligible resource.

Appendix Map Number 33

The Additon Farm (**ID-629/MCHP No. 234-0013hfs**) located at 6 Additon Road in the southwestern corner of the town of Leeds, is located 0.2 miles east of the direct APE, within the indirect APE and approximately 0.31 miles from the eastern edge of the indirect APE boundary. The complex is comprised of a connected vernacular farmhouse (**ID-631**), one detached dairy barn (**ID-627**), a silo (**ID-628**), two hay barns (**ID-630** and **ID-632**), and a storage barn (**ID-633**) and is recommended eligible for listing on the NRHP under criteria A: agriculture/farming; C: architecture. Because of the distance between the farmstead and the Project, in combination with large wooded areas to the west, open pasture, and the area's rolling topography, the Project will not affect the setting, feeling and association of the farm complex. Therefore, there will be no adverse effects of the Project on the farmstead located at 6 Additon Road.

The **Benjamin Allen Farmstead (ID-1511)** is on the north approach to Clark Mountain and the project area is approximately 1,300 feet east of the house. It is recommended eligible for NRHP listing under Criterion A for Agriculture/farming and under Criterion C for Architecture. Although the project area is at a lower elevation, there is dense hardwood forest immediately to the east of the house that obscure views eastward. The Project in this area consists of upgrades to existing towers and infrastructure. The existing towers and project corridor are only minimally visible to or from this property and no other effects are anticipated. Therefore, SEARCH recommends the project would have no adverse effect on this property (**ID-1511, and IDs 617-621**).

Appendix Map 34

The **John Allen House at 196 N Mountain Rd ID-615**) sits near the ridge of Clark Mountain and the project area is approximately 2,400 feet east of and downslope from the house. The residence is recommended eligible for NRHP listing under criteria A: Early settlement and

development; C: Architecture. Although the project area is at a lower elevation, there is dense hardwood forest immediately to the east of the house that obscure views eastward from the house. The Project in this area consists of upgrades to existing towers and infrastructure. The existing towers and project corridor are minimally visible to or from this property and no other effects are anticipated. Therefore, the project would have no adverse effect on this property.

Appendix Map Number 35a

Old Valley Cemetery (ID-580) was evaluated eligible for National Register listing and MHPC concurred with this evaluation on August 23, 2012. The cemetery was originally laid out in 1805 and expanded in 1872. A stone and wrought-iron fence was added in 1927. The Old Valley Cemetery is significant under Criterion A at the local level for its age and association with early settlement and development. The cemetery is also known as Greenwood Cemetery and was first known as Walton Yard (MOCA n.d.). Old Valley Cemetery is approximately 1,700 feet from the project area. The Project in this area consists of upgrades to existing towers and infrastructure. The existing towers and project corridor are not visible to or from the Old Valley Cemetery due to distance and intervening, dense vegetation. Since the Project is minimally visible to or from this property, and no other effects are anticipated, the project would have no adverse effect on this property.

Appendix Map Number 35b

The barn and farmhouse at **308 US Route 202 (ID-564/565, MHPC 0439-02 #29/#29a)** were previously recommended NRHP-eligible in 2002 with MHPC concurrence on May 13, 2012. Constructed between 1840 and 1860, the barn is part of a connected farmhouse and is a bank barn with a front gable, clapboard siding, and fieldstone foundations. The farmhouse was constructed between 1830 and 1850 and is a good example of a vernacular adaptation of the Greek Revival Style. The property is significant under Criterion C at the local level as a good example of a mid-nineteenth century connected farmhouse and the folk Greek Revival Style of the farmhouse. The house and barn are approximately 650 feet southeast of the project area and within the half-mile buffer for anticipated indirect effects. Views to and from the property to the project area are obscured by dense forest and a slight rise in elevation from the property to the project area. The Project in this area consists of upgrades to existing towers and infrastructure. Since the Project is minimally visible to or from this property and no other indirect effects are anticipated due to the distance and topography, the project would have no adverse effect on this property.

Appendix Map Number 36

Pan Am Freight Railroad Line – culvert (ID-488) is located approximately 10 feet east-northeast of the Pan Am Freight Railroad Line Merrill Road crossing in Lewiston, and is recommended eligible for NRHP listing under criterion A: Transportation. The proposed project area is located approximately 2,150 feet southwest of the culvert and will be visible. The small granite block culvert is associated with the railroad which has an industrial feeling. The proposed project will not detract from the feeling or association of the culvert with the railroad and transportation; therefore, the Project will have no adverse effect on this resource.

Appendix Map Number 36a

The farmhouse and barn at **6 S River Road (ID-543 and ID-544)** are recommended eligible under Criterion C and are approximately 1,000 feet west-northwest of the project area. Views to the project area from the property are across two roads with intervening vegetation between and the project area is barely visible from the property in fall and winter seasons and not visible under spring and summer vegetation conditions. In this area, the project consists of upgrades to existing towers and infrastructure. The additional infrastructure at this location would introduce a negligible indirect visual effect to this property that would not reduce its historic integrity in any aspect nor alter any character-defining features. Therefore, the project would have no adverse effect on either of the resources on this property.

Appendix Map Number 39

374 Randall Road (ID-387), is a National Register eligible residential building under criterion C for architecture, located in Lewiston. The building sits north of Randall Road on a small rectangular parcel and faces south. The building and its associated parcel are three-tenths of a mile west of the project area. The views between the building and the project area are obscured by heavy vegetation, and the existing utility corridor is barely visible. The proposed improvements to the corridor will not alter the current visual conditions of the resource, and will have no adverse effect on 374 Randall Road **(ID-387)**.

Appendix Map Number 40

The Clough Cemetery (ID-352), is National Register eligible under Criterion A for settlement. The cemetery sits between S. Lisbon Road and Lisbon Street/ME-196. The existing utility corridor is approximately 380 yards west-northwest of the west boundary of the property. The west edge of the property is lined in trees, which largely obscures the view to and from the project area. The existing lines are partially visible from the south edge of the property. The surrounding area is largely commercial, with an Exxon Mobil gas station to the east and a hotel (Lighthouse Inn) to the south. Existing power lines run along the south end of the property. The proposed improvements to the utility corridor 380 yards west of the cemetery are not likely to be discernable from other elements in the existing setting, which include commercial properties and signage and vegetation. Due to only slight visibility of the project area and overall distance between the project area and resource, the proposed project will have no adverse effect on the Clough Cemetery **(ID-352)**.

Appendix Map Number 40b

The Clough Meeting House (ID-356), is a National Register listed house of worship dating to 1846. The building was listed in 2013 under Criterion C. The building sits on the north side of S. Lisbon Road approximately 460 yards east of the existing utility corridor. The property does not have a clear view of the corridor because there are several parcels with heavy vegetation to the west of the building, which fully obscures the views. The proposed improvements to the corridor will not remove any of the trees or increase the size of the existing towers, thus the current viewshed of the building will not change. Due to a lack of visibility between the

building and the project area, the proposed project will have no effect on the Clough Meeting House (ID-356).

Appendix Map Number 40c

Lewiston Grange #2 (ID-373), is a Grange building in south Lewiston that is recommended eligible for listing on the NRHP under criteria A: Social history, civic affairs; and C: Architecture. The building sits at 2 Crowley Road, just north of the intersection of S. Lisbon Road and Crowley Road. The building faces east-southeast away from the project area. The building is nearly three-tenths of a mile east of the project area. The views between the building and the project area are obscured by heavy vegetation and numerous other buildings. The proposed improvements to the corridor will not alter current visual conditions of the resource, and will have no effect on the Lewiston Grange #2 (ID-373).

Appendix Map Number 43

The farmstead (ID-1510) located at 31 Auburn Pownal Road, southeast of Durham, is immediately west of the direct APE and is entirely within the indirect APE. In addition to the vernacular farmhouse (ID-299), there are also two detached barns (ID-300 and ID-301). The farmstead is recommended eligible for listing on the NRHP under criteria A: agriculture/farming; C: architecture. The closest structure in the complex to the direct APE, the farmhouse, is approximately 575 feet to the east, and faces east-southeast away from the Project. A wooded area and large modern agricultural building are situated between the Project and the farmstead, acting as a buffer. Because the woods and modern outbuilding already block the view of the existing transmission lines from the complex, and the farmhouse faces away from the Project, it will not affect the setting, feeling and association of the complex. Therefore, there will be no adverse effects of the Project on the farmstead located at 31 Auburn Pownal Road.

Appendix Map Number 44

The farmhouse (ID-249/MHPC ID #358-00023) and connected barn (ID-250/MHPC ID #358-0023a) are located on Auburn Road in Pownal. There is an existing transmission line located approximately 0.1 miles (0.16 km) north of the property that is visible from the farmhouse. The viewshed of the resources has included a utility line since at least 1961 (per an aerial image available on www.historicaerials.com), which dates to within the period of significance. This modern intrusion has resulted in a loss of integrity of the rural setting, but does not detract from the farmhouse being NRHP eligible under Criterion C for Architecture. The connected farmhouse is located approximately 0.51 miles (0.82 km) east of the existing substation and transmission line that will be improved as part of the proposed project. The substation, the transmission line, and their proposed improvements will be minimally visible from the connected farmhouse due to distance, topography, and dense vegetation. Improvements from this project will not negatively impact any of the significant character defining features of the connected farmhouse and will not substantially alter the existing visual conditions of the resource. Therefore, the proposed project will have no adverse effect on the farmhouse (ID-249) and connected barn (ID-250).

Appendix Map Number 44a

The existing transmission line and substation are located approximately 0.35 miles (0.57 km) southwest of the southwesternmost point of the recommended **North Pownal Village Historic District (ID-1594)**. The Village is eligible for NRHP listing under criteria A: Early settlement, development, and industry; and C: Architecture. The center of North Pownal Village is located approximately 0.56 miles (0.90 km) northeast of the existing substation. The existing transmission line and substation are not visible from the center of the historic district, due to the distance between the district and the substation/transmission lines, and due to vegetation. The proposed project similarly will not be visible from the center of the North Pownal Village. It will be minimally visible from the southwestern most portion of the district along Fickett Road during leaf-off conditions in the winter and early spring. Full vegetation, the sloping topography, and the distance from the proposed project will make the new transmission line barely visible from the southwestern portion of the district and not visible from the center and northeastern portions of North Pownal Village. Therefore, the proposed project will have no adverse effect on the historic district or its rural setting.

Appendix Map Number 45a

York Bridge #3249 (ID-1304), S. Belfast Road over West Branch Sheepscot River, Windsor. The proposed Project is located approximately 2,450 feet south of the bridge. The current transmission line is minimally visible as it crosses S. Belfast Road. Due to separating distance, the modifications to the existing transmission corridor will not alter the current setting of the bridge, nor its associations with transportation under NRHP Criterion A.

Survey Number 47

St. Denis Historic District (ID-1595) includes the NRHP-listed St. Denis Church (**ID-1368/NRHP# 76000102**) and associated rectory, parish center, churchyard cemetery, and Calvary Cemetery (**ID-1366, ID-1367 and ID-1369 through ID-1371**). The district is recommended eligible for NRHP listing under criteria A: Social History, Religion; B: Person; and C: Architecture. Located on Grand Army Road/Route 126 at intersection with Cooper Road, where the name of Route 126 changes to Gardiner Road. The District is located approximately 1,050 southeast of the proposed project area at its closest point with a wooded area on the western edge of the proposed district acting as natural screening. The resources face Grand Army Road which run northwest-southeast through the district, placing the proposed project area in the periphery view from the district. The reconnaissance survey of this area was performed in early May, during leaf-off conditions, and the existing transmission line was not visible from the church or parish hall, or from Grand Army Road within the proposed district. The modifications to the existing transmission corridor call for an additional line at the same height as the existing line and will not impact the setting of the district. Therefore, SEARCH recommends a finding of no adverse effect to **St. Denis Historic District (ID-1595)**.

Appendix Map Number 49

Albee Bridge #3831 (ID-1408), E. River Road over Sheepscot River, Whitefield. The T-beam bridge spans the Sheepscot River approximately 2,500 feet east of the proposed project. The reconnaissance survey of this area was performed in early May, during leaf-off conditions, and

the existing transmission line was not visible from E. River Road at this location, but the proposed undertaking may be partially visible above the tree line. Due to separating distance and intervening vegetation, the modifications to the existing transmission corridor will not alter the current setting of the bridge, nor its associations with transportation under NRHP Criterion A.; therefore, the Project will have no adverse effect on **Albee Bridge #3831 (ID-1408)**.

Appendix Map Number 49a

Kings Mill Union Hall (ID-1395), 901 Townhouse Road, Whitefield. The proposed project is located approximately 1,770 feet west of the hall, which faces east on Townhouse Road away from the project site. The reconnaissance survey of this area was performed in early May, during leaf-off conditions, and the existing transmission line was visible from Townhouse Road at this location. Due to separating distance and intervening vegetation, the modifications to the existing transmission corridor will not significantly alter the current setting of the hall, and will not affect its associations with the Social History and Recreation of Whitefield under NRHP Criterion A. Therefore, SEARCH recommends a finding of no adverse effect to **Kings Mill Union Hall (ID-1395)**.

The house at **14 Pittston Road (ID-1398)** in Whitefield, sits on a small rise and faces south across Pittston Road toward the Sheepscot River. The proposed project is located approximately 2,050 feet west of the residence and a small stand of trees on the west side of the house provides screening. The reconnaissance survey of this area was performed in early May, during leaf-off conditions, and the existing transmission line was not visible from Pittston Road at this location. The proposed project is not located in the primary north-south viewsheds to and from this resource. Due to separating distance and intervening vegetation, the modifications to the existing transmission corridor will be minimally visible (if at all) and will not alter the current setting of the house, nor its associations with development under NRHP Criterion A, or architecture under criterion C; therefore, SEARCH recommends a finding of no adverse effect to the house at **14 Pittston Road (ID-1398)**.

Appendix Map Number 51

The **Head Tide Historic District (ID-1420 / NRHP# 74000320)** is a NRHP-listed mid-18th to mid-19th century mill community in Alna. The western edge of the historic district is 0.35 miles east of the direct APE, in the indirect APE near its eastern boundary. It was determined eligible by MHPC in 1974 and listed in the NRHP in November 1974 under criteria A: Commerce, Literature, Industry, and Religion; and C: Architecture. The resources closest to the Project on the western edge of the historic district face east away from the Project and existing transmission lines. Therefore, the Project will not affect the setting, feeling, and association of the historic district. There will be no adverse effects of the Project on the NRHP-listed Head Tide Historic District.

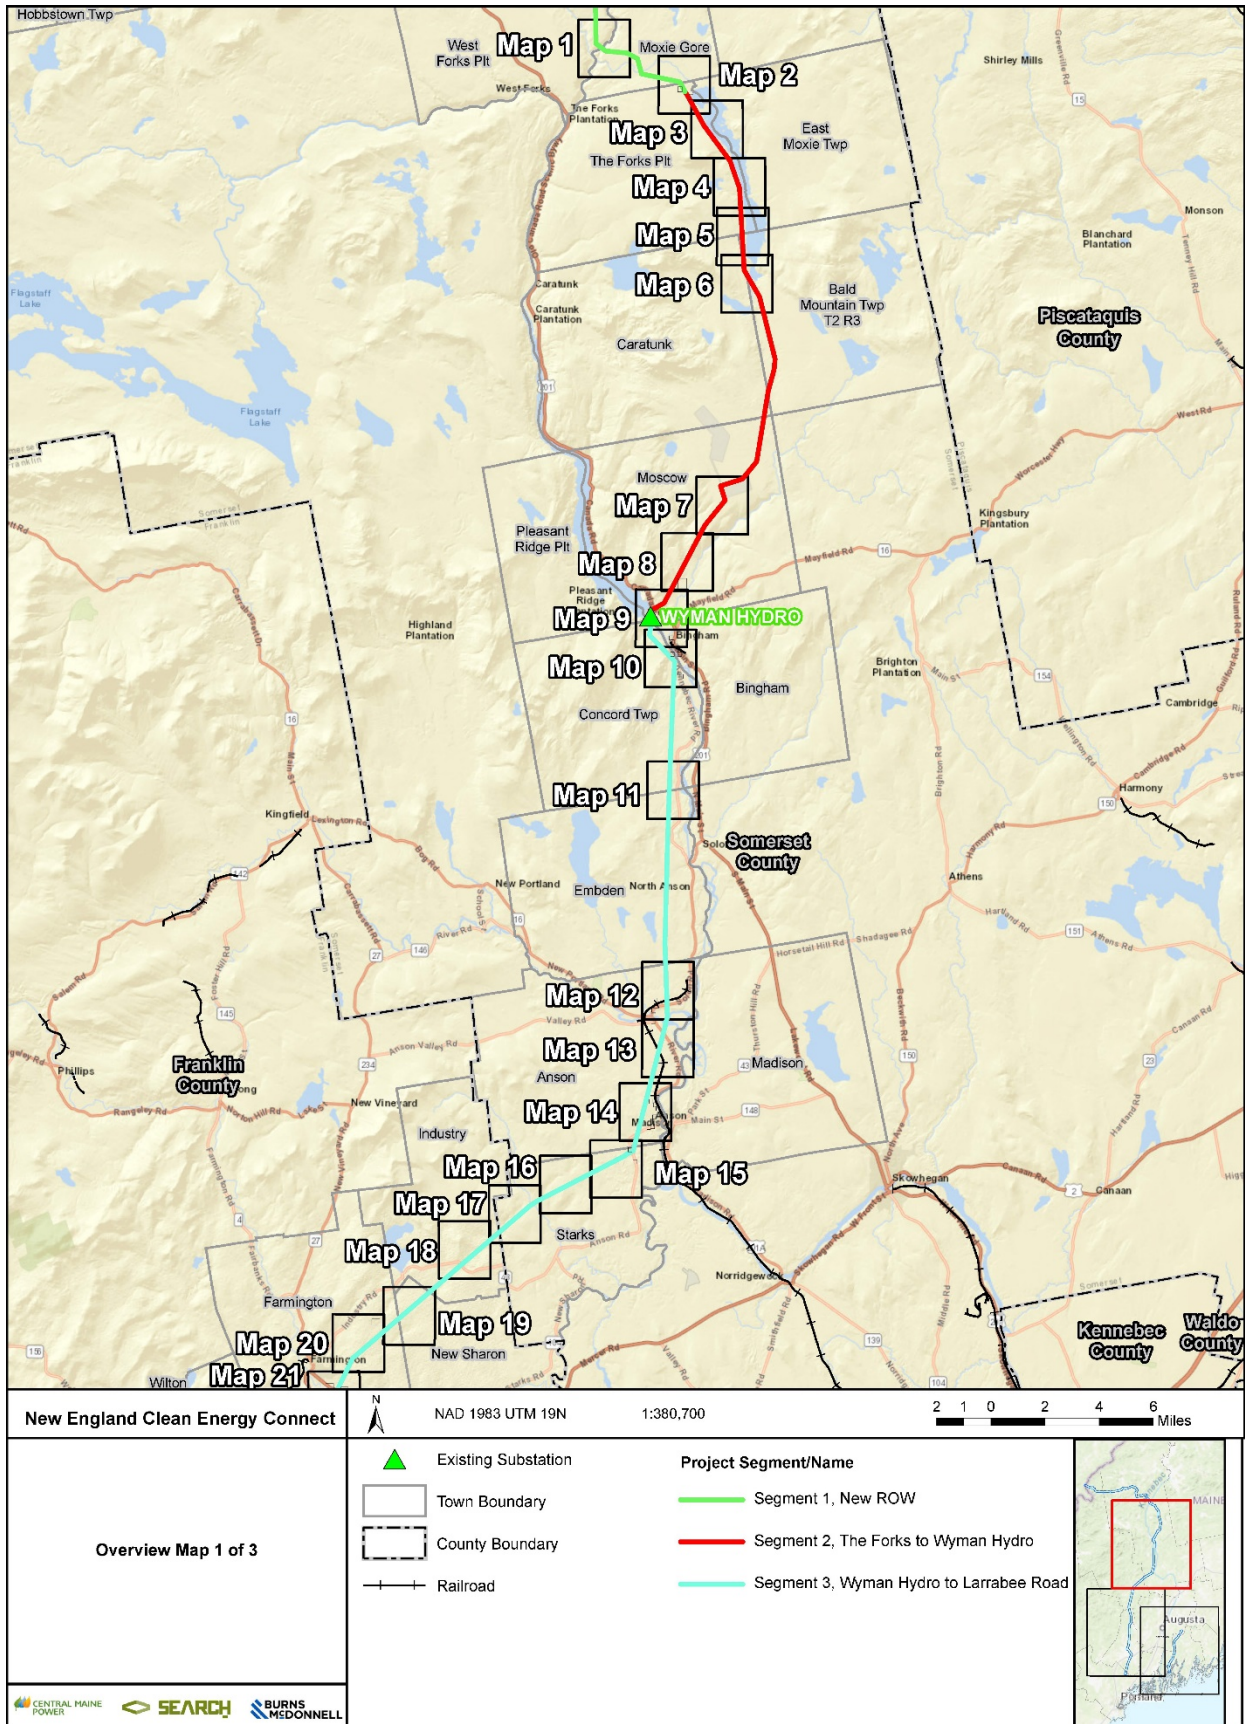

Appendix Map Number 53

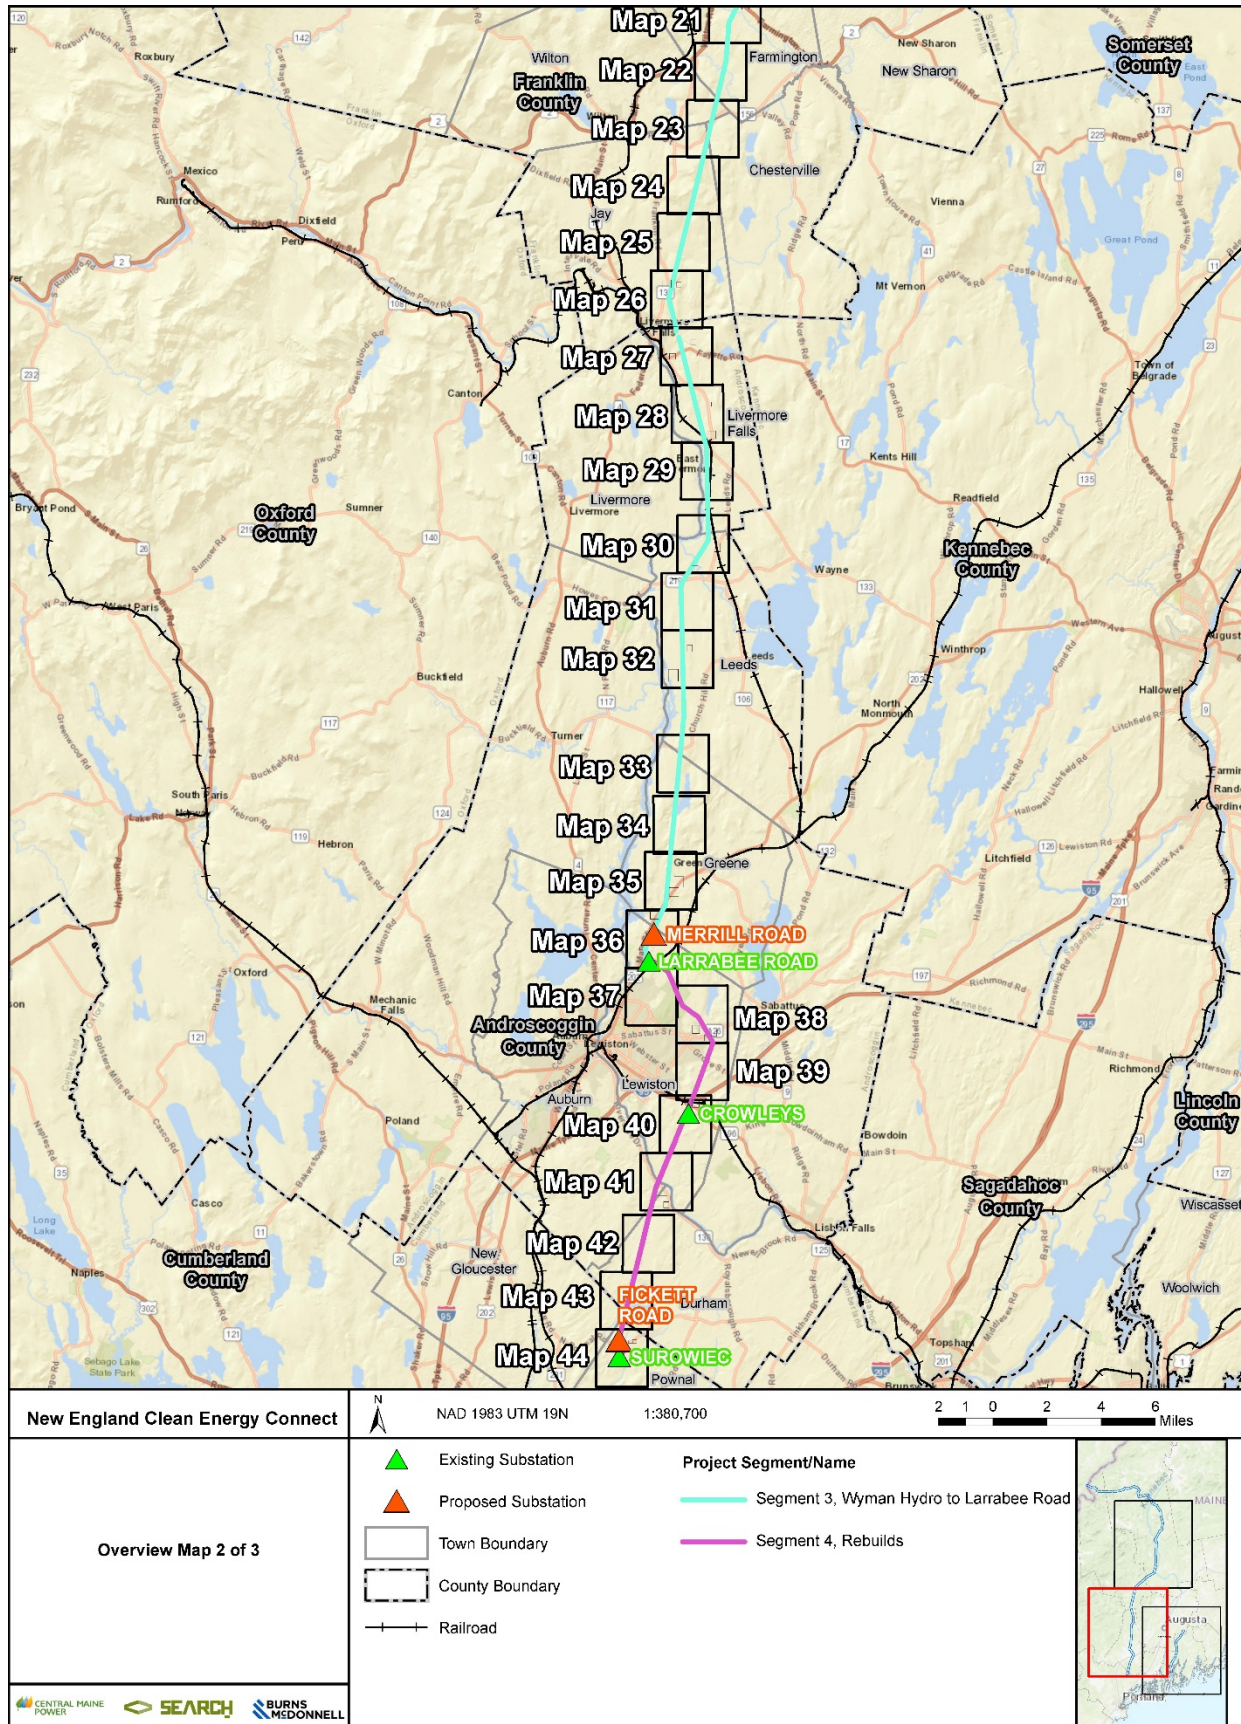

The **Leslie Farm (ID-1449/MHPC# 491-0408hfs)** is located at 48 Dickinson Road in Wiscasset, Lincoln County, approximately 0.20 miles north of its intersection with Willow Lane, on the west side of Dickinson Road. The farm is comprised of the 1850 vernacular stone farmhouse

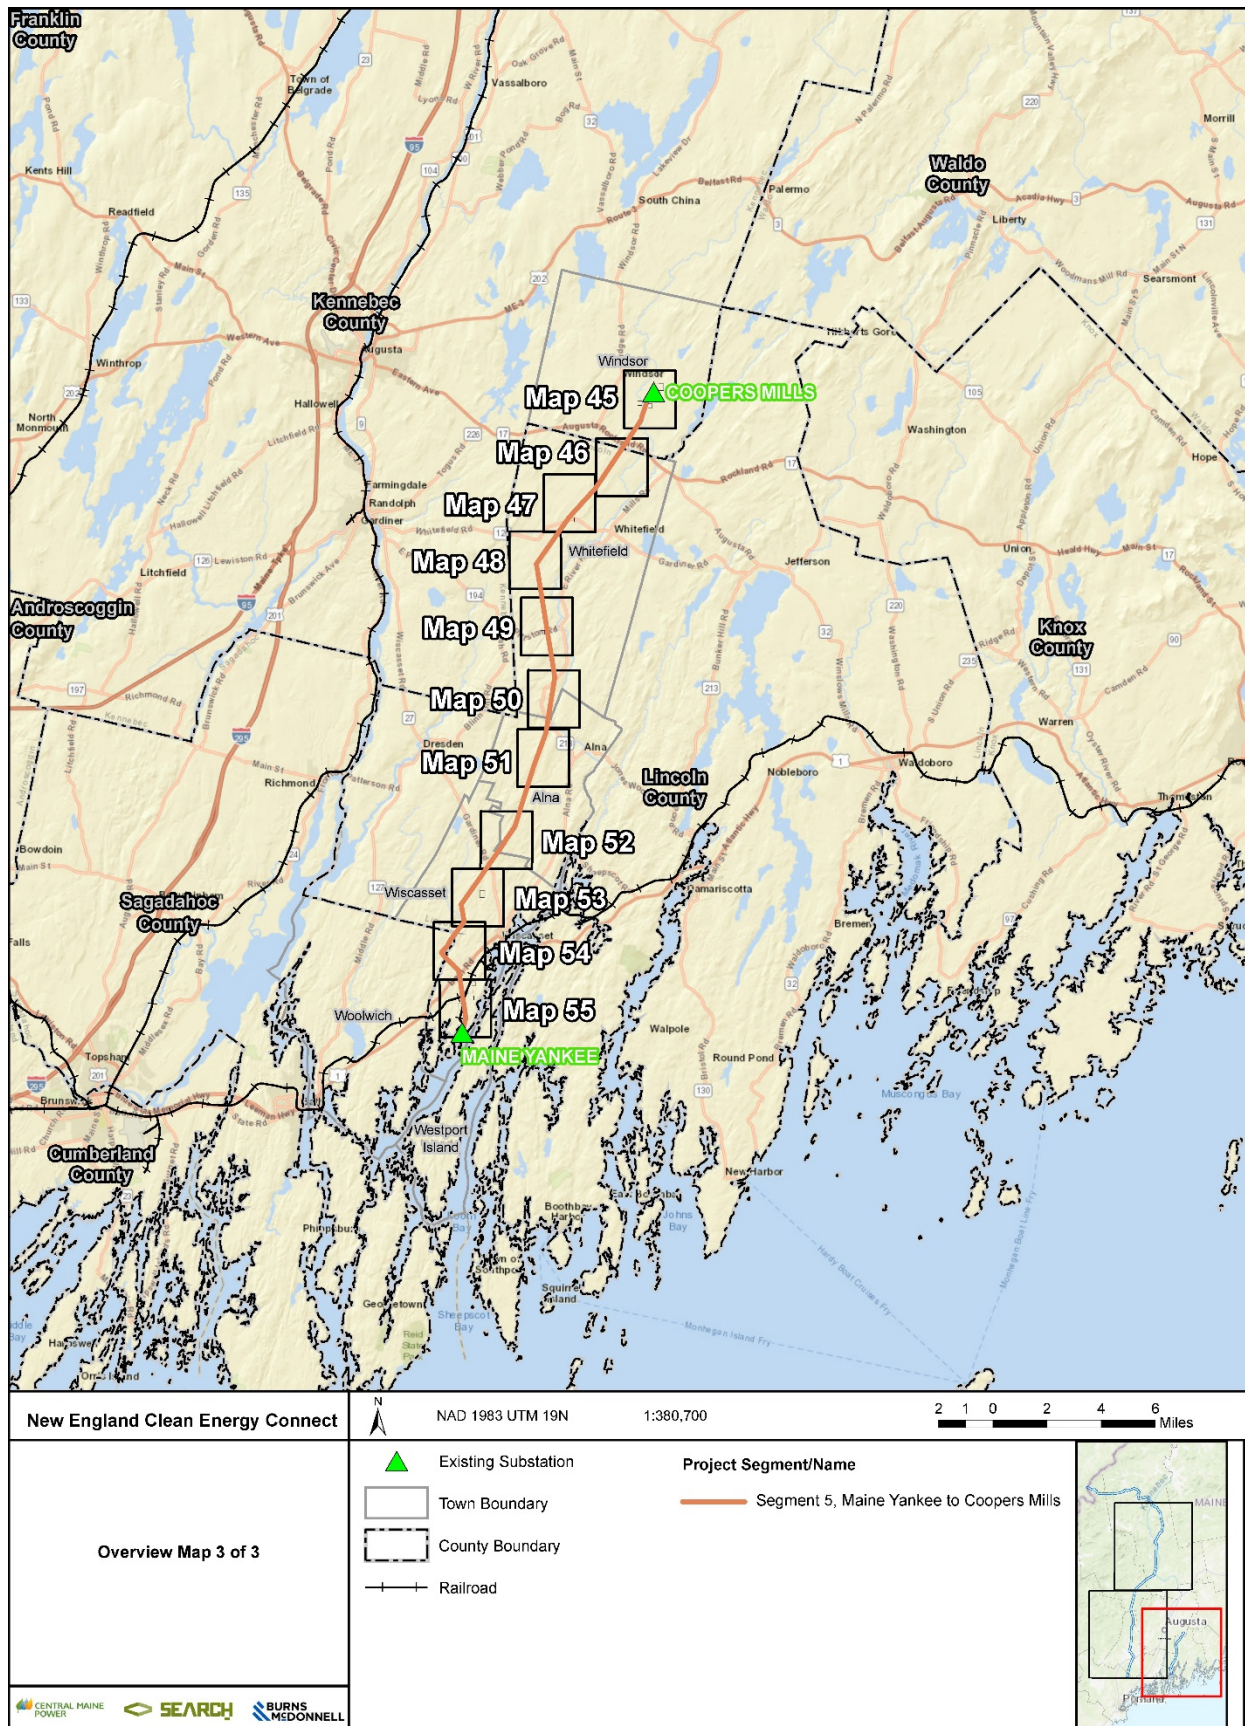

(ID-1447/MHPC# 491-0408) and barn/wagon shed **(ID-1448/MHPC# 491-0408a)**. The farmstead was determined to be eligible for the NRHP by the MHPC in June 2016, and is eligible under criterion C for architecture. The buildings are approximately 0.38 miles east of the direct APE, however a section of the western boundary of the property is immediately adjacent to the direct APE. The land between the buildings and the direct APE is densely wooded, which acts as a visual buffer between the Project and the farmstead. The Project calls for the addition of a transmission line with 85-foot tall towers in between the existing 85-foot and 80-foot lines and will not be visible from the buildings on the parcel, but will be visible from the farmstead parcel. The project does not require any clearing of vegetation and will not physically impact the undeveloped western edge of the property. The Project will not affect the setting, feeling, and association of the farmhouse or barn and will have no adverse effect on the character defining features of the property. As such, the Project will have no adverse effect on the farmhouse and barn located at 48 Dickinson Road in Wiscasset.

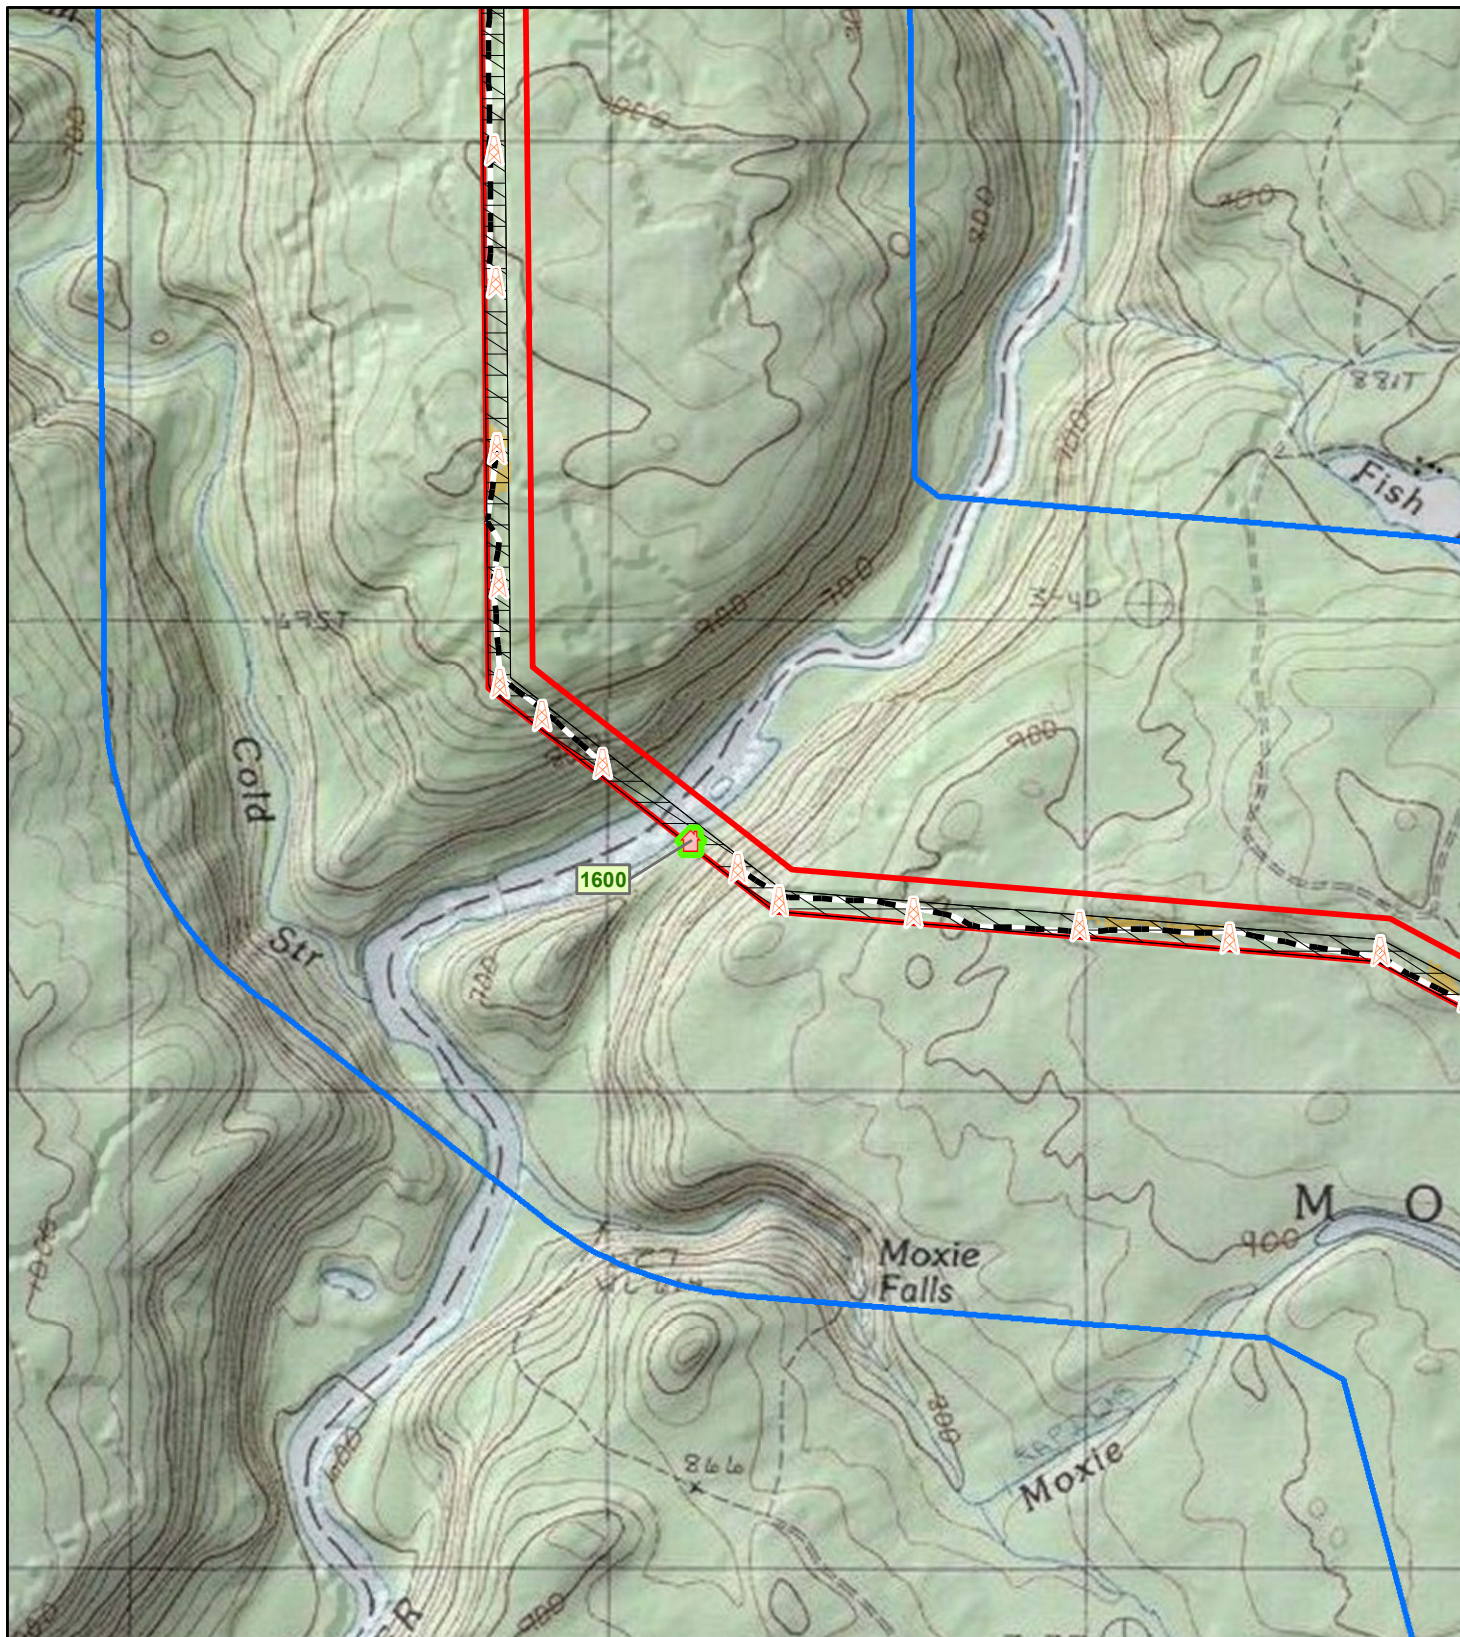

Greenlawn Cemetery (ID-1457) is located approximately 0.11 miles (0.18 km) to the east of the project area, and is recommended eligible for NRHP listing under criteria A: Settlement and C: Design. The project in this area consists of upgrades to existing towers and infrastructure. The existing towers and project corridor are not visible to or from the historical portion of the Greenlawn Cemetery due to distance and intervening, dense vegetation. The existing transmission lines are partially visible from the modern, non-historic section of the cemetery to the south, and is only minimally visible due to the distance from the project area and vegetation screening. Since the project area is not visible to or from the historic resource, and no other effects are anticipated, the project would have no adverse effect on this property.

APPENDIX D: PHOTO SIMULATIONS OF PROJECT IMPACTS

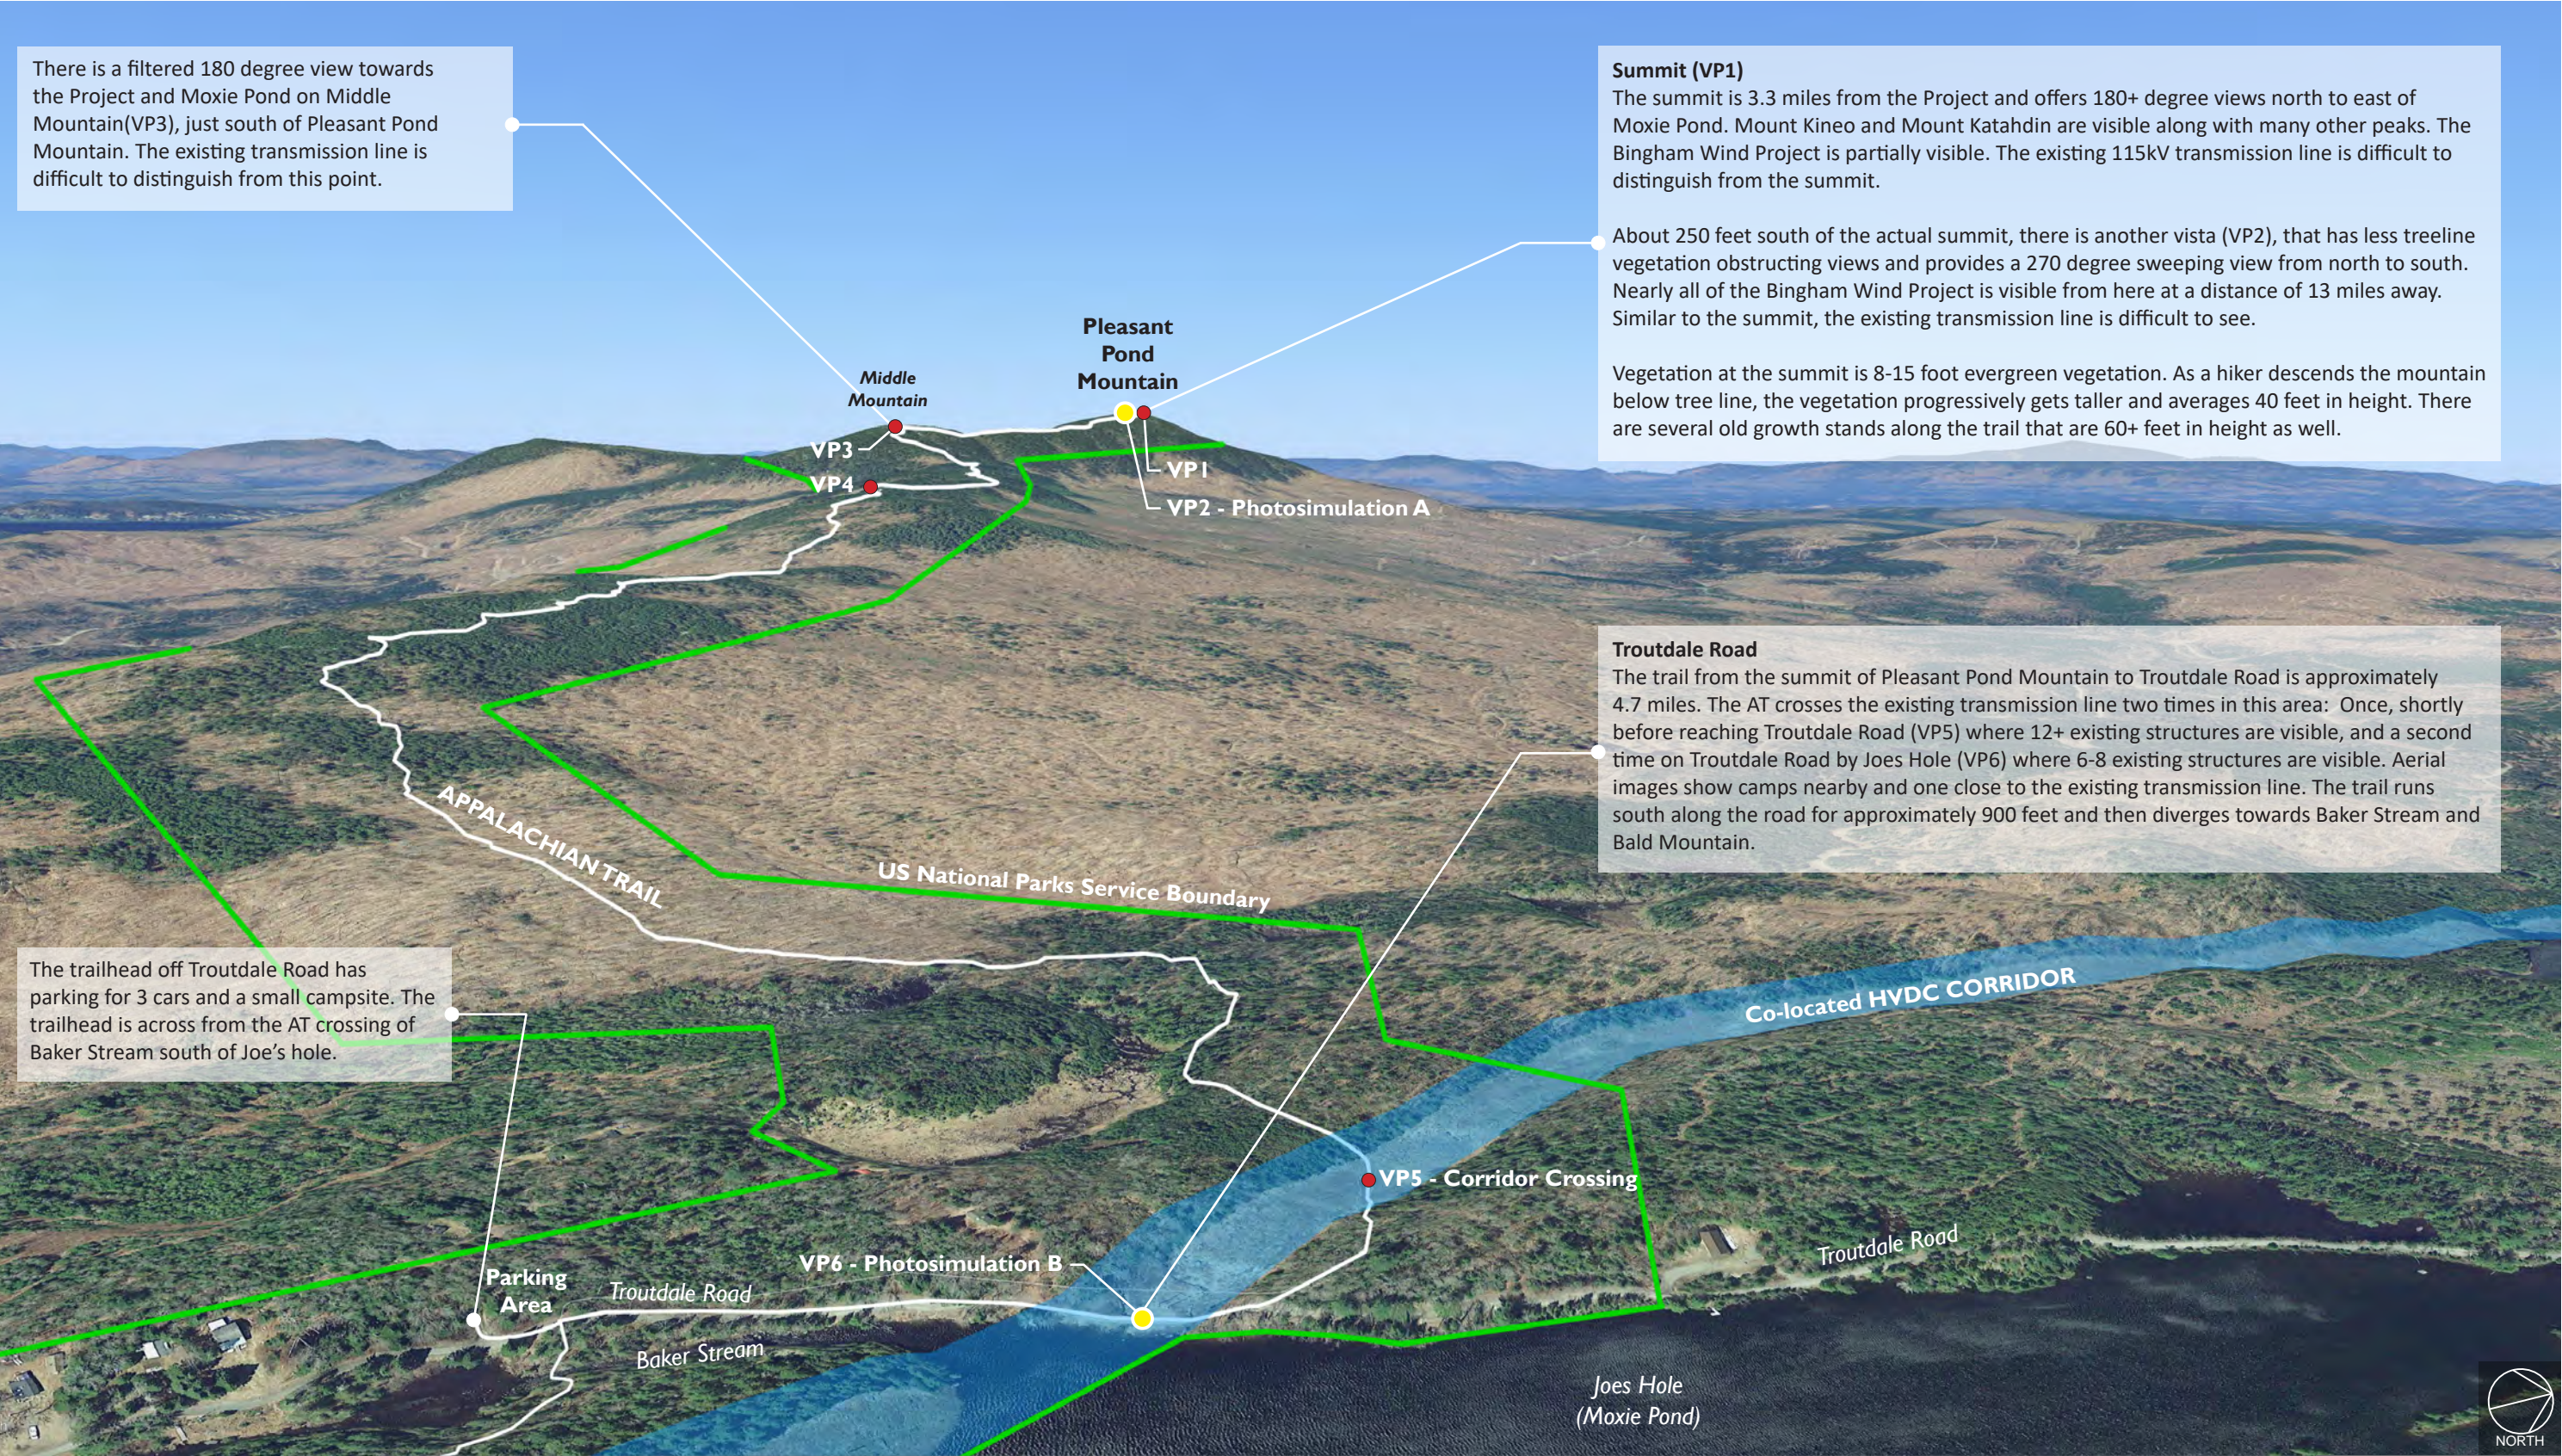

10 Mile Appalachian Trail Section

Viewpoint and Photosimulation Location Map

Google Earth Aerial - Troutdale Road to Pleasant Mountain

Google Earth image with Baker Stream and Troutdale Road in the foreground, and Pleasant Pond Mountain in the background.

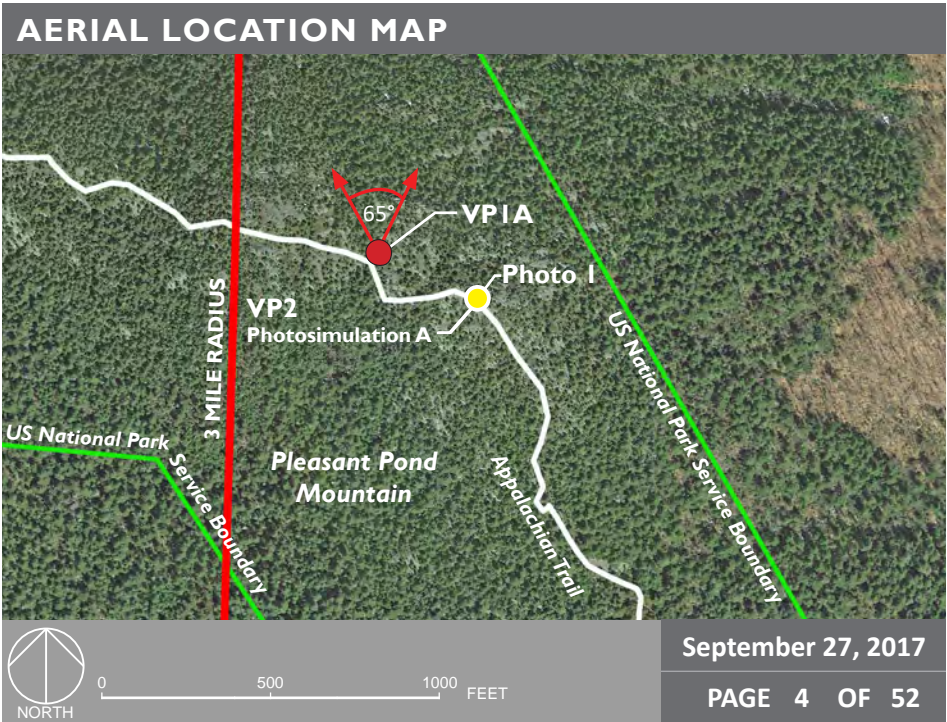

VIEWPOINT I - PLEASANT POND MOUNTAIN, The Forks Plt

VP1.A: A portion of a panoramic view looking northwest to northeast from the summit of Pleasant Pond Mountain. The closest portion of the proposed 150’ wide cleared HVDC Corridor will be visible at a distance of 5.1 miles looking in this direction. See photosimulation from VP2.
Photograph taken on 6/2/2017 at 9:13am

Photo 1: View looking northwest on the summit of Pleasant Pond Mountain illustrates the typical summit vegetation of spruce/fir forest with intermittent areas of exposed ledge outcropping. Open or minimally filtered views are possible from approximately 900 feet along the AT as it passes over the summit looking northwest to the southeast.

VIEWPOINT I - PLEASANT POND MOUNTAIN, The Forks Plt

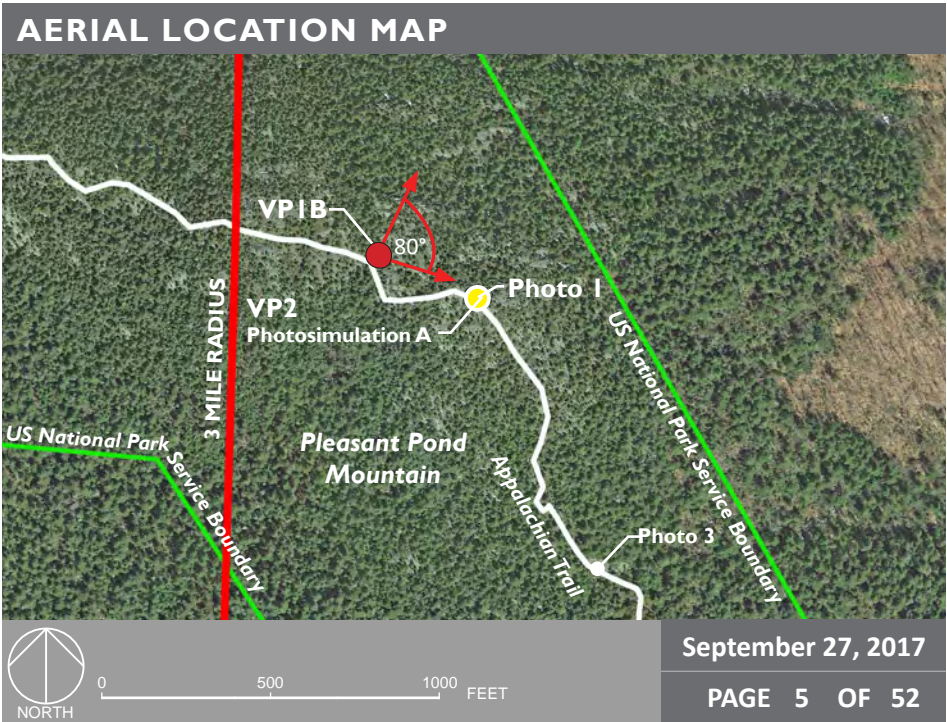

VP1.B: A continuation of the panoramic view looking northeast to southeast from the summit of Pleasant Pond Mountain. The closest structures in the co-located HVDC Corridor will be 3.0 miles away on the western shore of Moxie Pond.
Photograph taken on 6/2/2017 at 9:13am

Photo 2: Typical trail character. Most of the trail between Troutdale Road and the summit passes through Spruce/Fir forest and Hemlock stands.

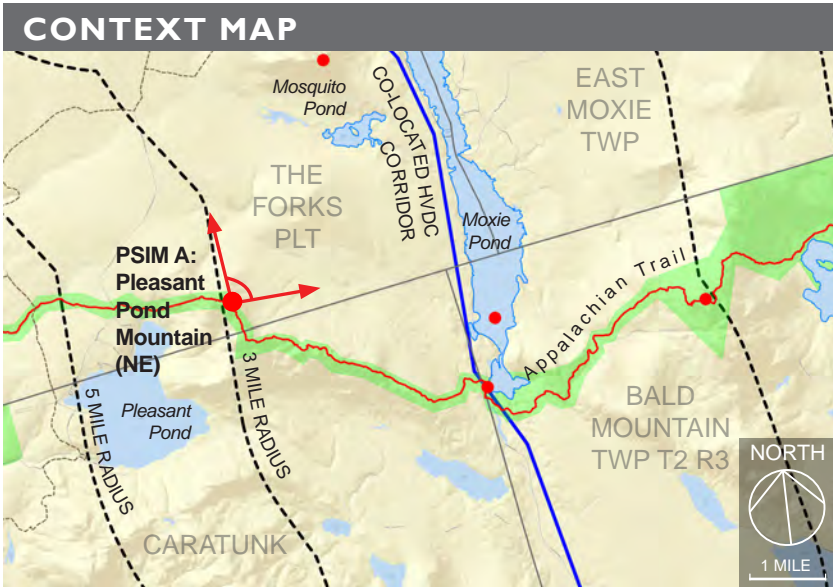

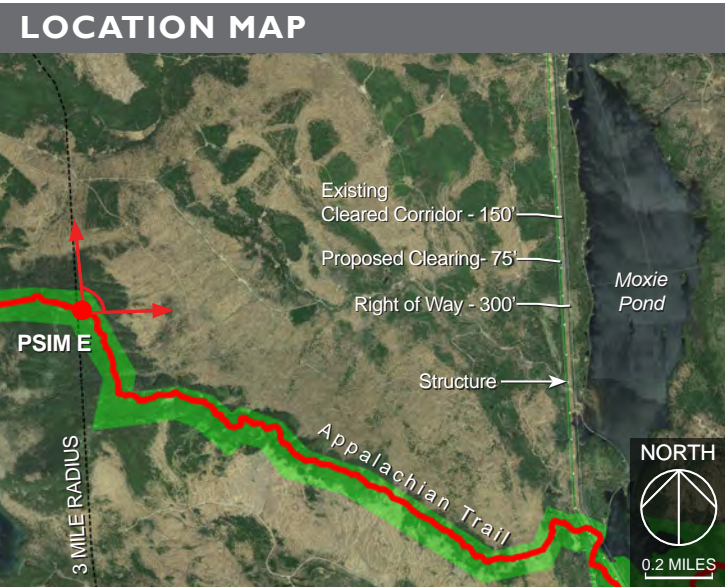

Photo 3: Filtered view looking east from Pleasant Mountain toward Bald Mountain. The proposed Project will be screened by foreground vegetation.

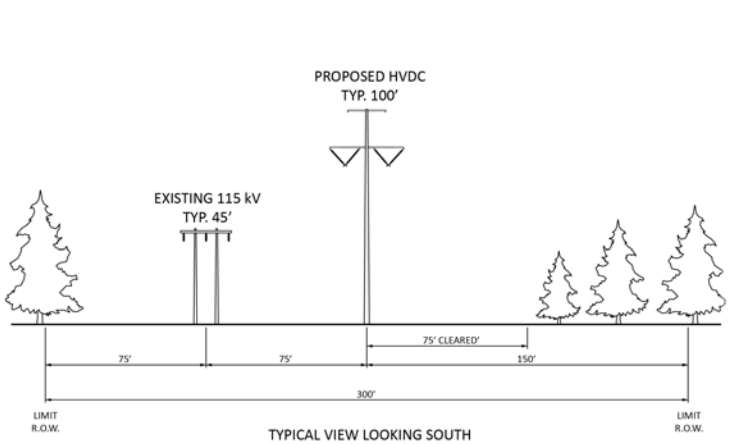

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Panoramic view looking north to northeast from a clearing 230’ east of the summit on Pleasant Pond Mountain on the Appalachian Trail in The Forks Plt. toward the proposed HVDC and co-located HVDC transmission lines. Mosquito Mountain and Moxie Pond are visible on the right side of the image. This image was selected to photosimulate because it offered a wider view than the marked summit of Pleasant Pond Mountain. The closest visible structure in the proposed HVDC corridor will be 3 miles from this viewpoint.

TECHNICAL INFORMATION

PAGE 6 OF 52		

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Existing Conditions: Normal view looking north from Pleasant Pond Mountain.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Normal view looking north from Pleasant Pond Mountain toward the proposed HVDC transmission line. The proposed corridor will be 5.5 to 7.1 miles from this location.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Normal view looking north from Pleasant Pond Mountain toward the proposed HVDC transmission line. The proposed corridor will be 5.5 to 7.1 miles from this location.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Existing Conditions: Normal view looking north from Pleasant Pond Mountain. Mosquito Mountain is visible on the left side of the image.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Normal view looking north from Pleasant Pond Mountain toward the proposed co-located HVDC transmission line. Up to two proposed structures and conductors will be visible at distances of 2.9 - 4.0 miles from this viewpoint.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Normal view looking north from Pleasant Pond Mountain toward the proposed co-located HVDC transmission line. Up to two proposed structures and conductors will be visible at distances of 2.9 - 4.0 miles from this viewpoint.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

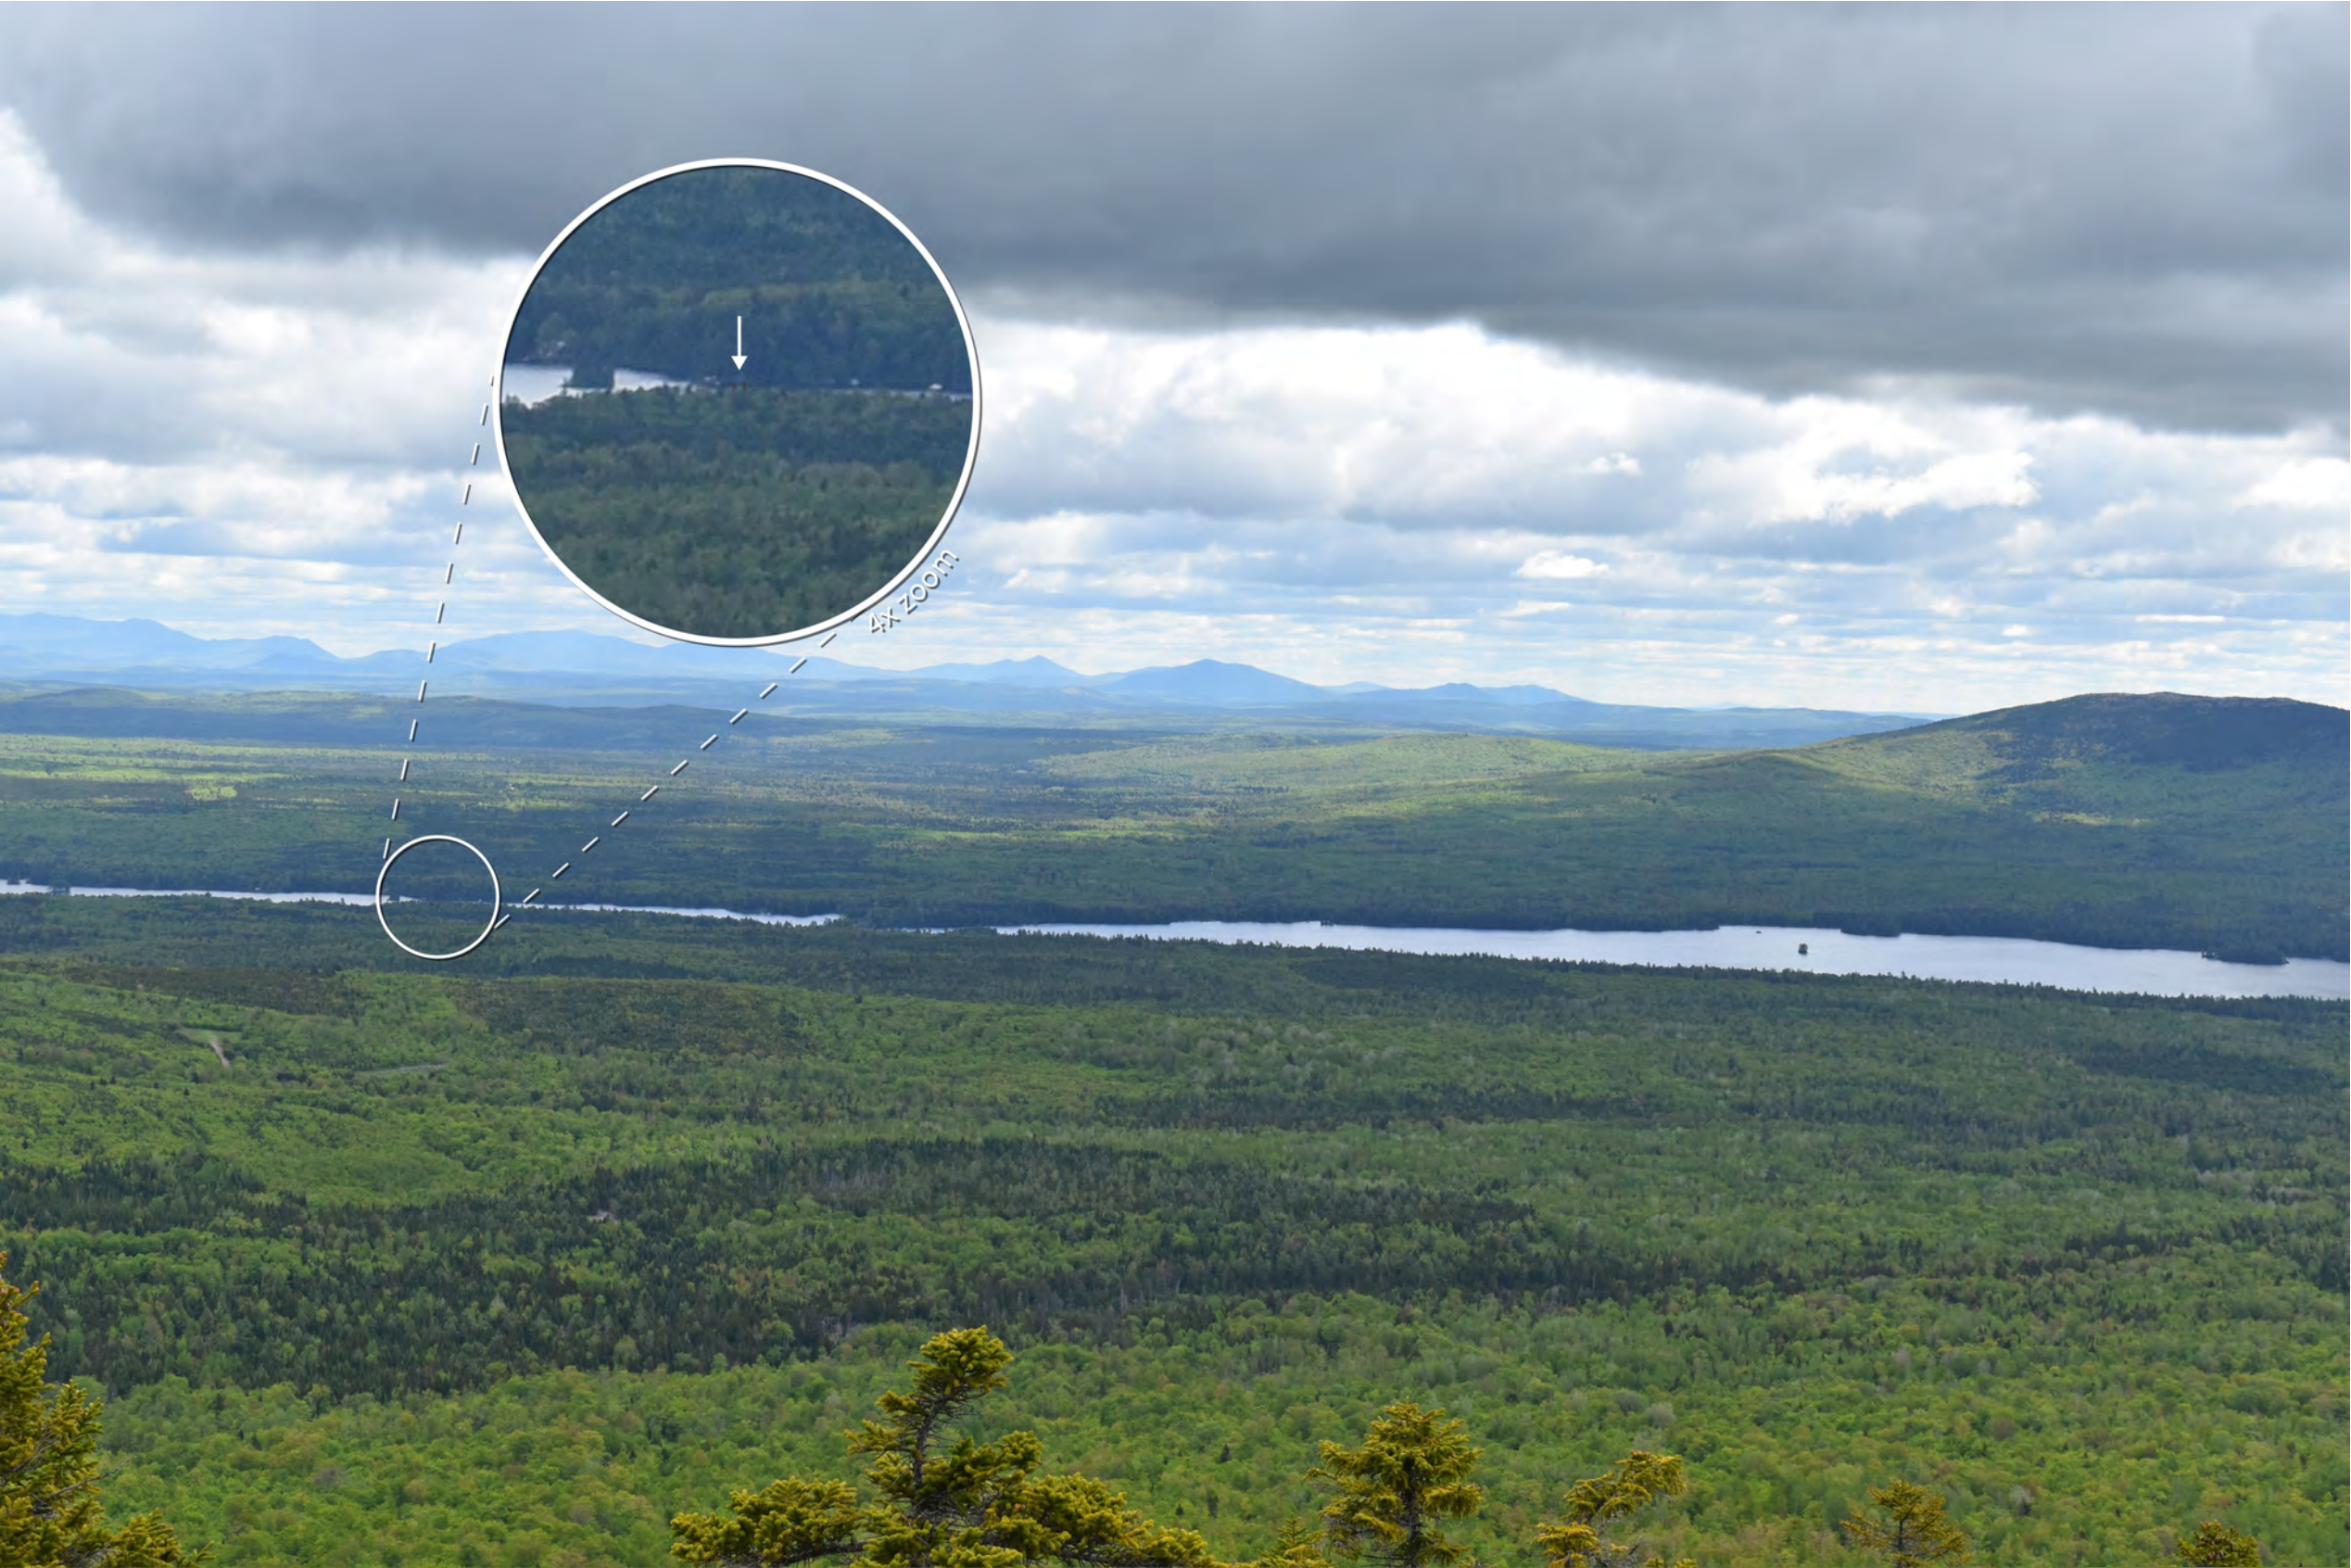

Existing Conditions: Normal view looking northeast from Pleasant Pond Mountain. Bald Mountain - North Peak is visible on the right side of the image.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Normal view looking northeast from Pleasant Pond Mountain toward the proposed co-located HVDC transmission line.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

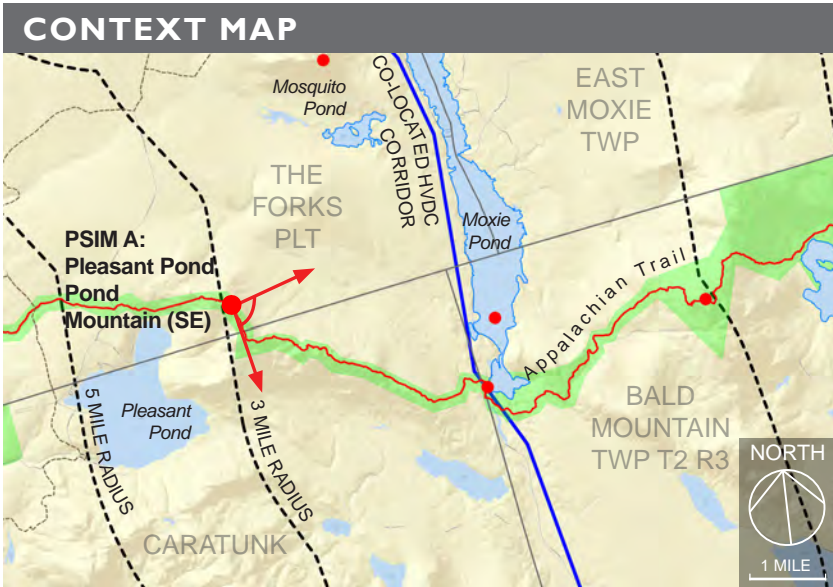

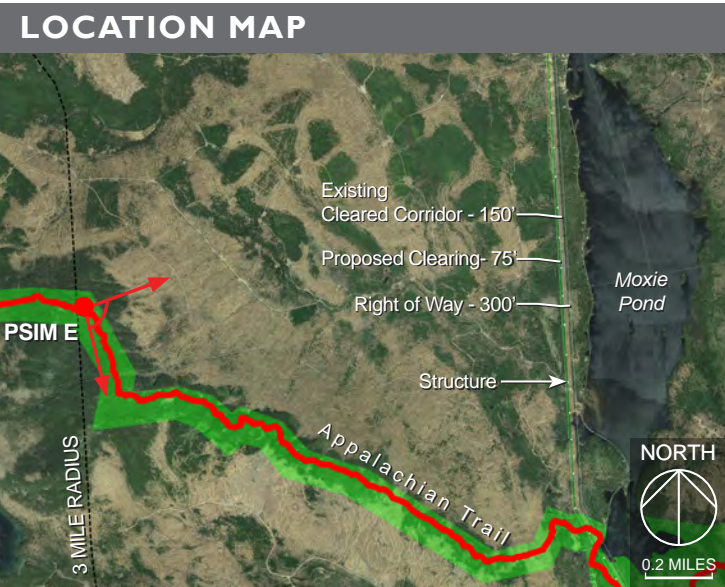

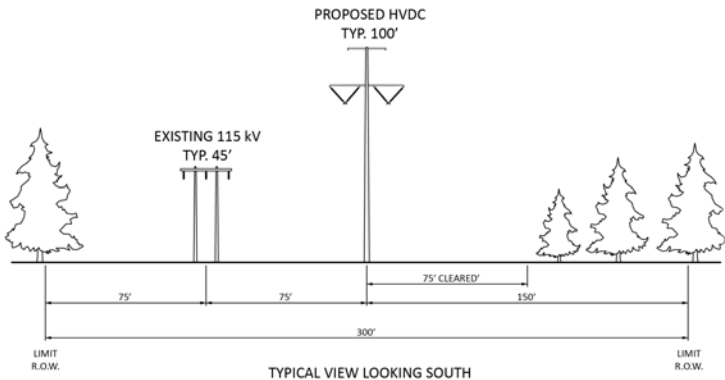

Proposed Conditions: Normal view looking northeast from Pleasant Pond Mountain toward the proposed co-located HVDC transmission line. One proposed structure and conductors will be visible at a distance of 3.5 miles from this viewpoint.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Continued panoramic view looking northeast to southeast from a clearing 230’ east of the summit on Pleasant Pond Mountain on the Appalachian Trail in The Forks Plt. toward the proposed co-located HVDC transmission line. Bald Mountain and Moxie Pond are visible in the center of the image. The closest visible structure in the proposed HVDC corridor will be 3.2 miles from this viewpoint.

September 27, 2017 PAGE 16 OF 52		

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Existing Conditions: Normal view looking northeast from Pleasant Pond Mountain. The North Peak of Bald Mountain is visible to the right side of the image. Moxie Pond is visible across the entire image.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Normal view looking northeast from Pleasant Pond Mountain toward the proposed co-located HVDC transmission line. One proposed structure and conductors will be visible at a distance of 3.2 miles from this viewpoint.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Normal view looking northeast from Pleasant Pond Mountain toward the proposed co-located HVDC transmission line. One proposed structure and conductors will be visible at a distance of 3.2 miles from this viewpoint.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Existing Conditions: Normal view looking east from Pleasant Pond Mountain. Baker Pond is visible in the center of the image. The **Bingham** Wind project is visible 13 miles +/- to the southwest (across entire horizon).

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Normal view looking east from Pleasant Pond Mountain toward the proposed co-located HVDC transmission line.

VIEWPOINT 2 PHOTOSIMULATION A: PLEASANT POND MOUNTAIN, The Forks Plt

Proposed Conditions: Normal view looking east from Pleasant Pond Mountain toward the proposed co-located HVDC transmission line. Up to 12 proposed structures and conductors will be visible at a distances of 4.5 - 6.5 miles from this viewpoint.

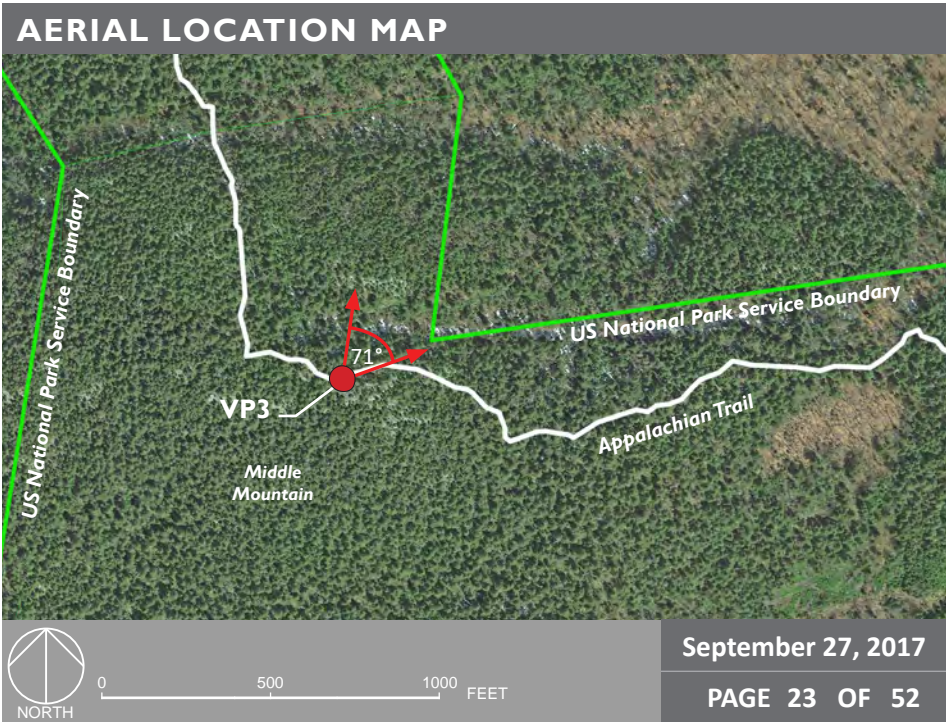

VIEWPOINT 3: PLEASANT POND MOUNTAIN, The Forks Plt

VP3: A panoramic view from a viewpoint approximately 0.6 miles south of the summit of Pleasant Pond Mountain looking north to northeast. The closest structures within the co-located HVDC Corridor will be 2.7 miles away.
Photograph taken on 6/2/2017 at 8:37am

Photo 4: View looking northwest from the trail toward filtered views of Pleasant Pond Mountain (on left in image) and Mosquito Mountain (on right in image). The Project will not be visible from this location due to the intervening vegetation. (See map on next page for photo location.)

VIEWPOINT 4 - PLEASANT POND MOUNTAIN, Caratunk

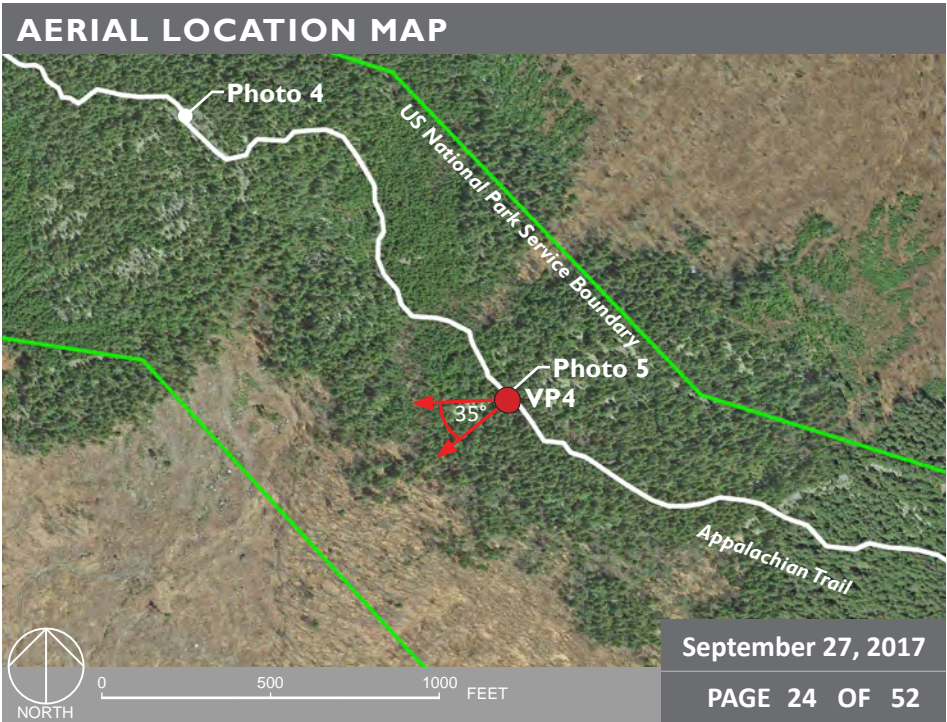

VP4: View looking southwest from the trail toward the Bigelow Mountain Range. The Project will not be visible from this viewpoint.
Photograph taken on 6/2/2017 at 7:34am

Photo 6: Typical trail character between VP 4 and Troutdale Road.

Photo 5: Typical trail character between VP 4 and Troutdale Road.

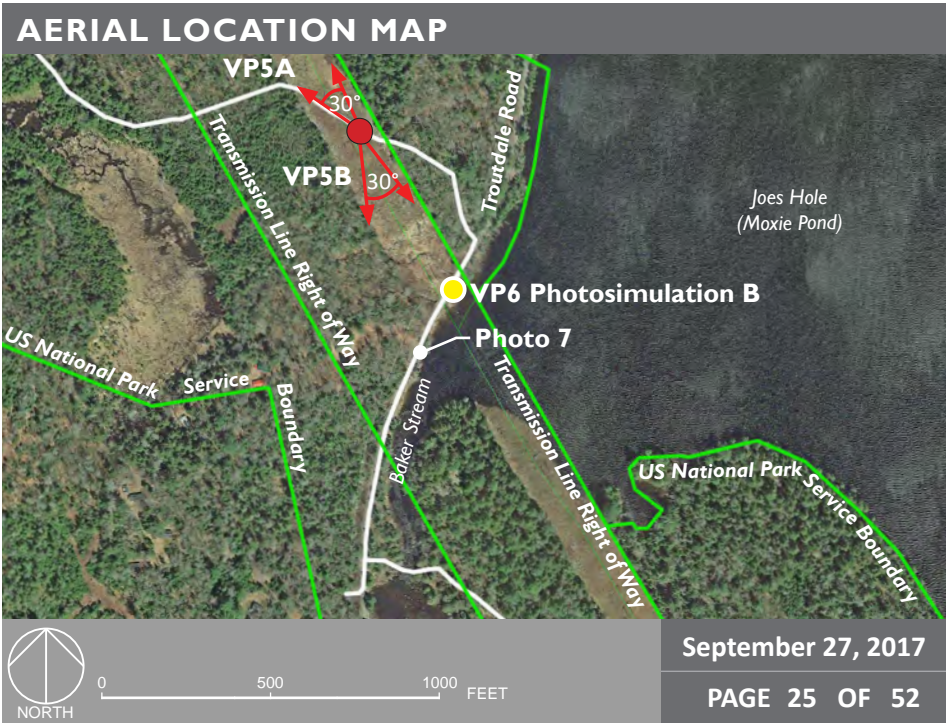

VIEWPOINT 5: EXISTING CORRIDOR CROSSING, Bald Mountain Twp

VP5.A: Panoramic view looking northwest at the intersection of the Appalachian Trail and the existing transmission line corridor. The existing 150’ wide 115 kV transmission line clearing will be widened by 75’ on the western side (to left of clearing in image above) to accommodate the new HVDC transmission line corridor. Two self weathering steel HVDC structures will be visible from this viewpoint.
Photographs taken on 6/2/2017 at 11:40 am

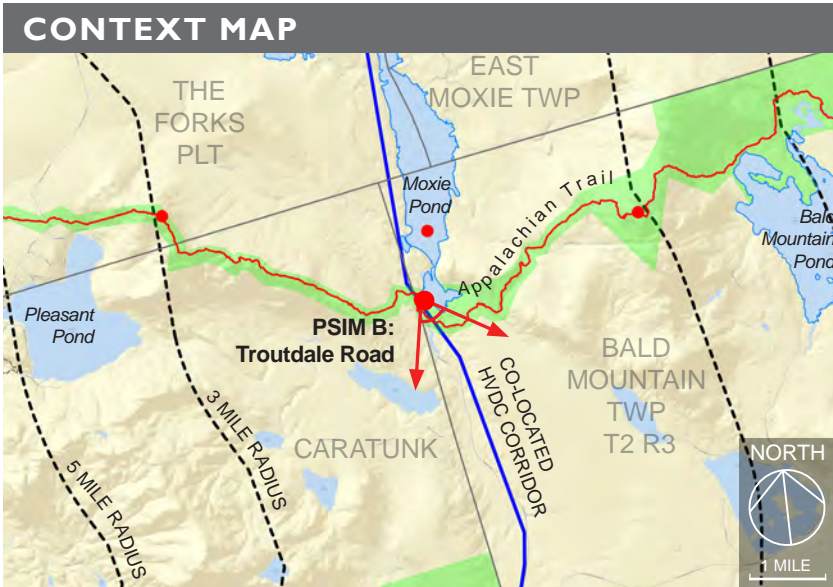

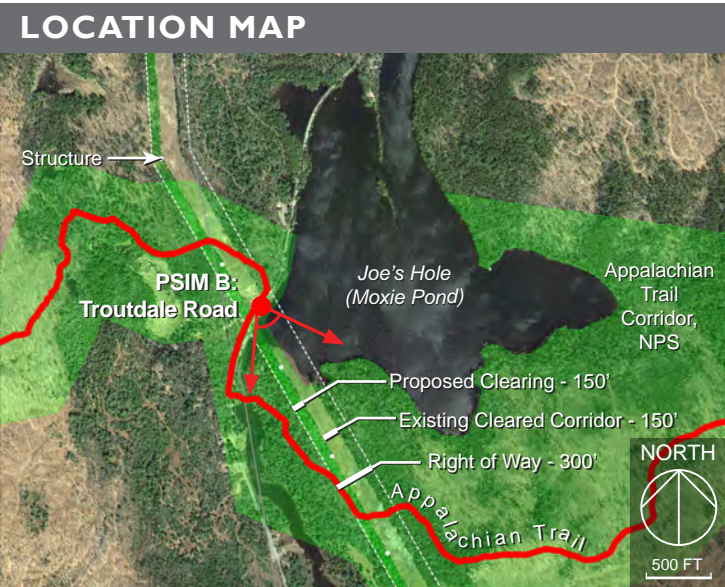

VP5.B: Panoramic view looking southeast towards Joe’s Hole (Moxie Pond) at the intersection of the Appalachian Trail and the existing transmission line corridor. The existing 150’ wide transmission line clearing will be widened by 75’ on the western side (to right of clearing in image above) to accommodate the new HVDC transmission line corridor. Portions of six self weathering steel HVDC structures will be visible from this viewpoint. See Photosimulation B.

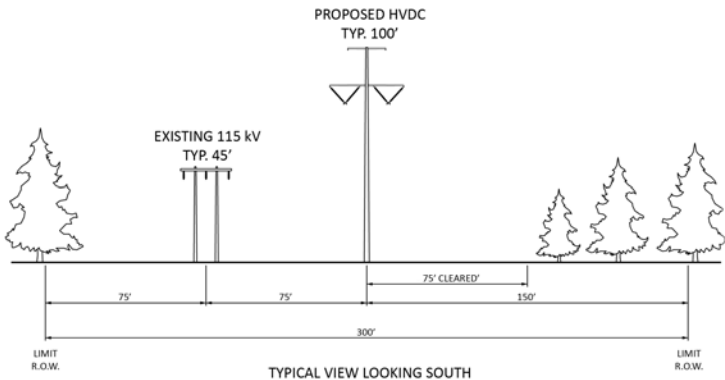

VIEWPOINT 6 PHOTOSIMULATION B: TROUTDALE ROAD, Bald Mountain Twp

Proposed Conditions: Panoramic view looking from southeast to south on Troutdale Road looking toward Joe’s Hole (Moxie Pond) in Bald Mountain TWP toward the proposed co-located HVDC transmission line. The Appalachian Trail is located on Troutdale Road for approximately 1,000’ including this section where the transmission corridor crosses. The existing 150’ wide transmission line clearing will be widened by 75’ on the western side to accommodate the new HVDC transmission line corridor. Portions of six HVDC structures will be visible from this viewpoint.

		Proposed Structures Visible	6
Distance to Nearest Visible Structure	500'		
		 CENTRAL MAINE POWER	
		September 27, 2017	PAGE 26 OF 52

VIEWPOINT 6 PHOTOSIMULATION B: TROUTDALE ROAD, Bald Mountain Twp

Existing Conditions: Normal view looking south on Troutdale Road toward the existing transmission line crossing of Joe’s Hole /Moxie Pond.

VIEWPOINT 6 PHOTOSIMULATION B: TROUTDALE ROAD, Bald Mountain Twp

Proposed Conditions: Normal view looking south on Troutdale Road looking toward Joe’s Hole toward the proposed co-located HVDC transmission line. The existing 150’ wide transmission line clearing will be widened by 75’ on the western side to accommodate the new HVDC transmission line corridor. Portions of six HVDC structures will be visible from this viewpoint.

TROUTDALE ROAD & BAKER STREAM, Bald Mountain Twp

Photo 7: View looking south toward Baker Stream on Troutdale Road just past the existing transmission line crossing. The Appalachian Trail is located on Troutdale Road for approximately 900 feet, merging north of the existing transmission line crossing and diverging east toward the Baker Stream crossing.

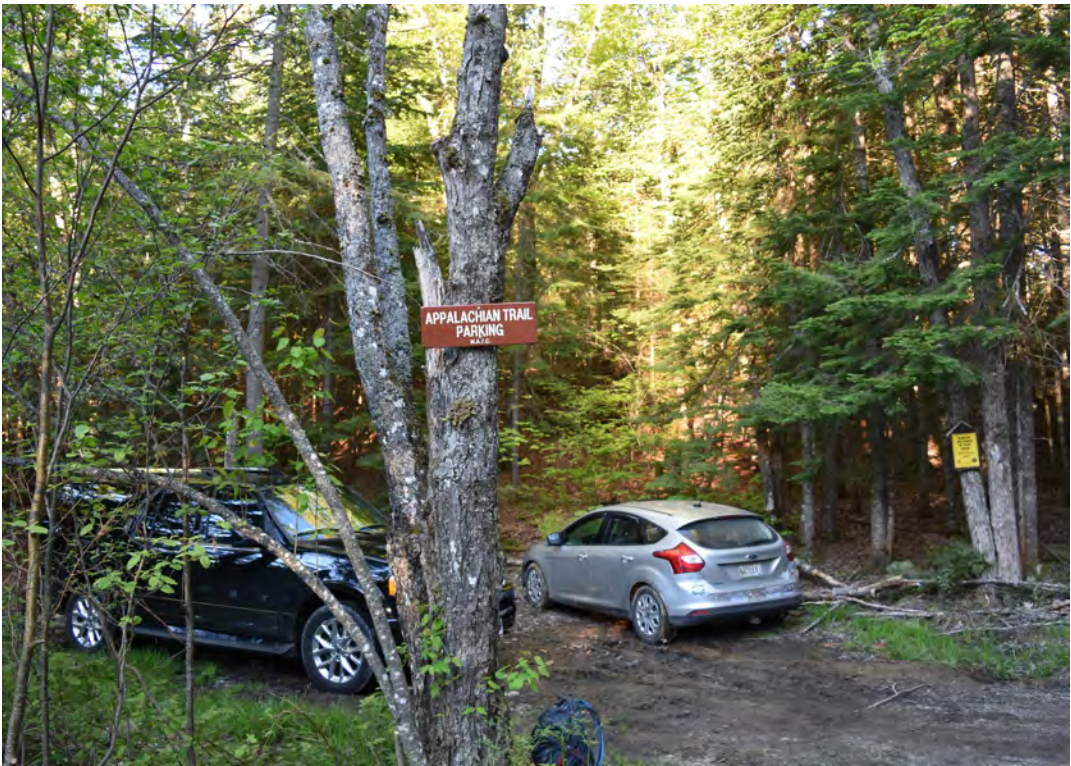

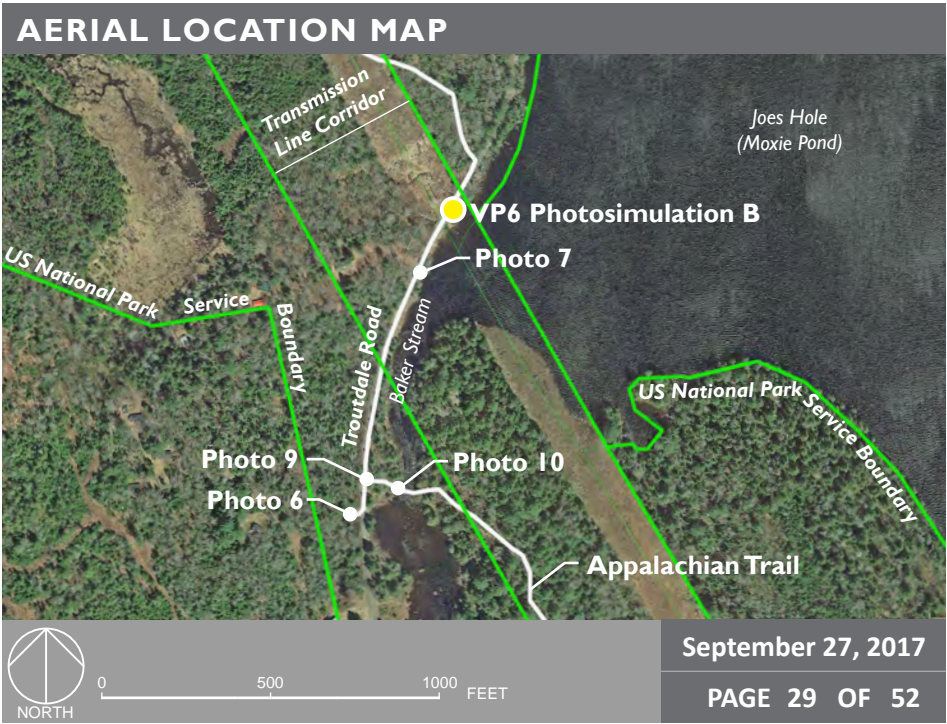

Photo 8: A small trail parking area for 3-4 vehicles is located just across the road from the Baker Stream crossing. The parking area serves day hikers and overnight hikers.

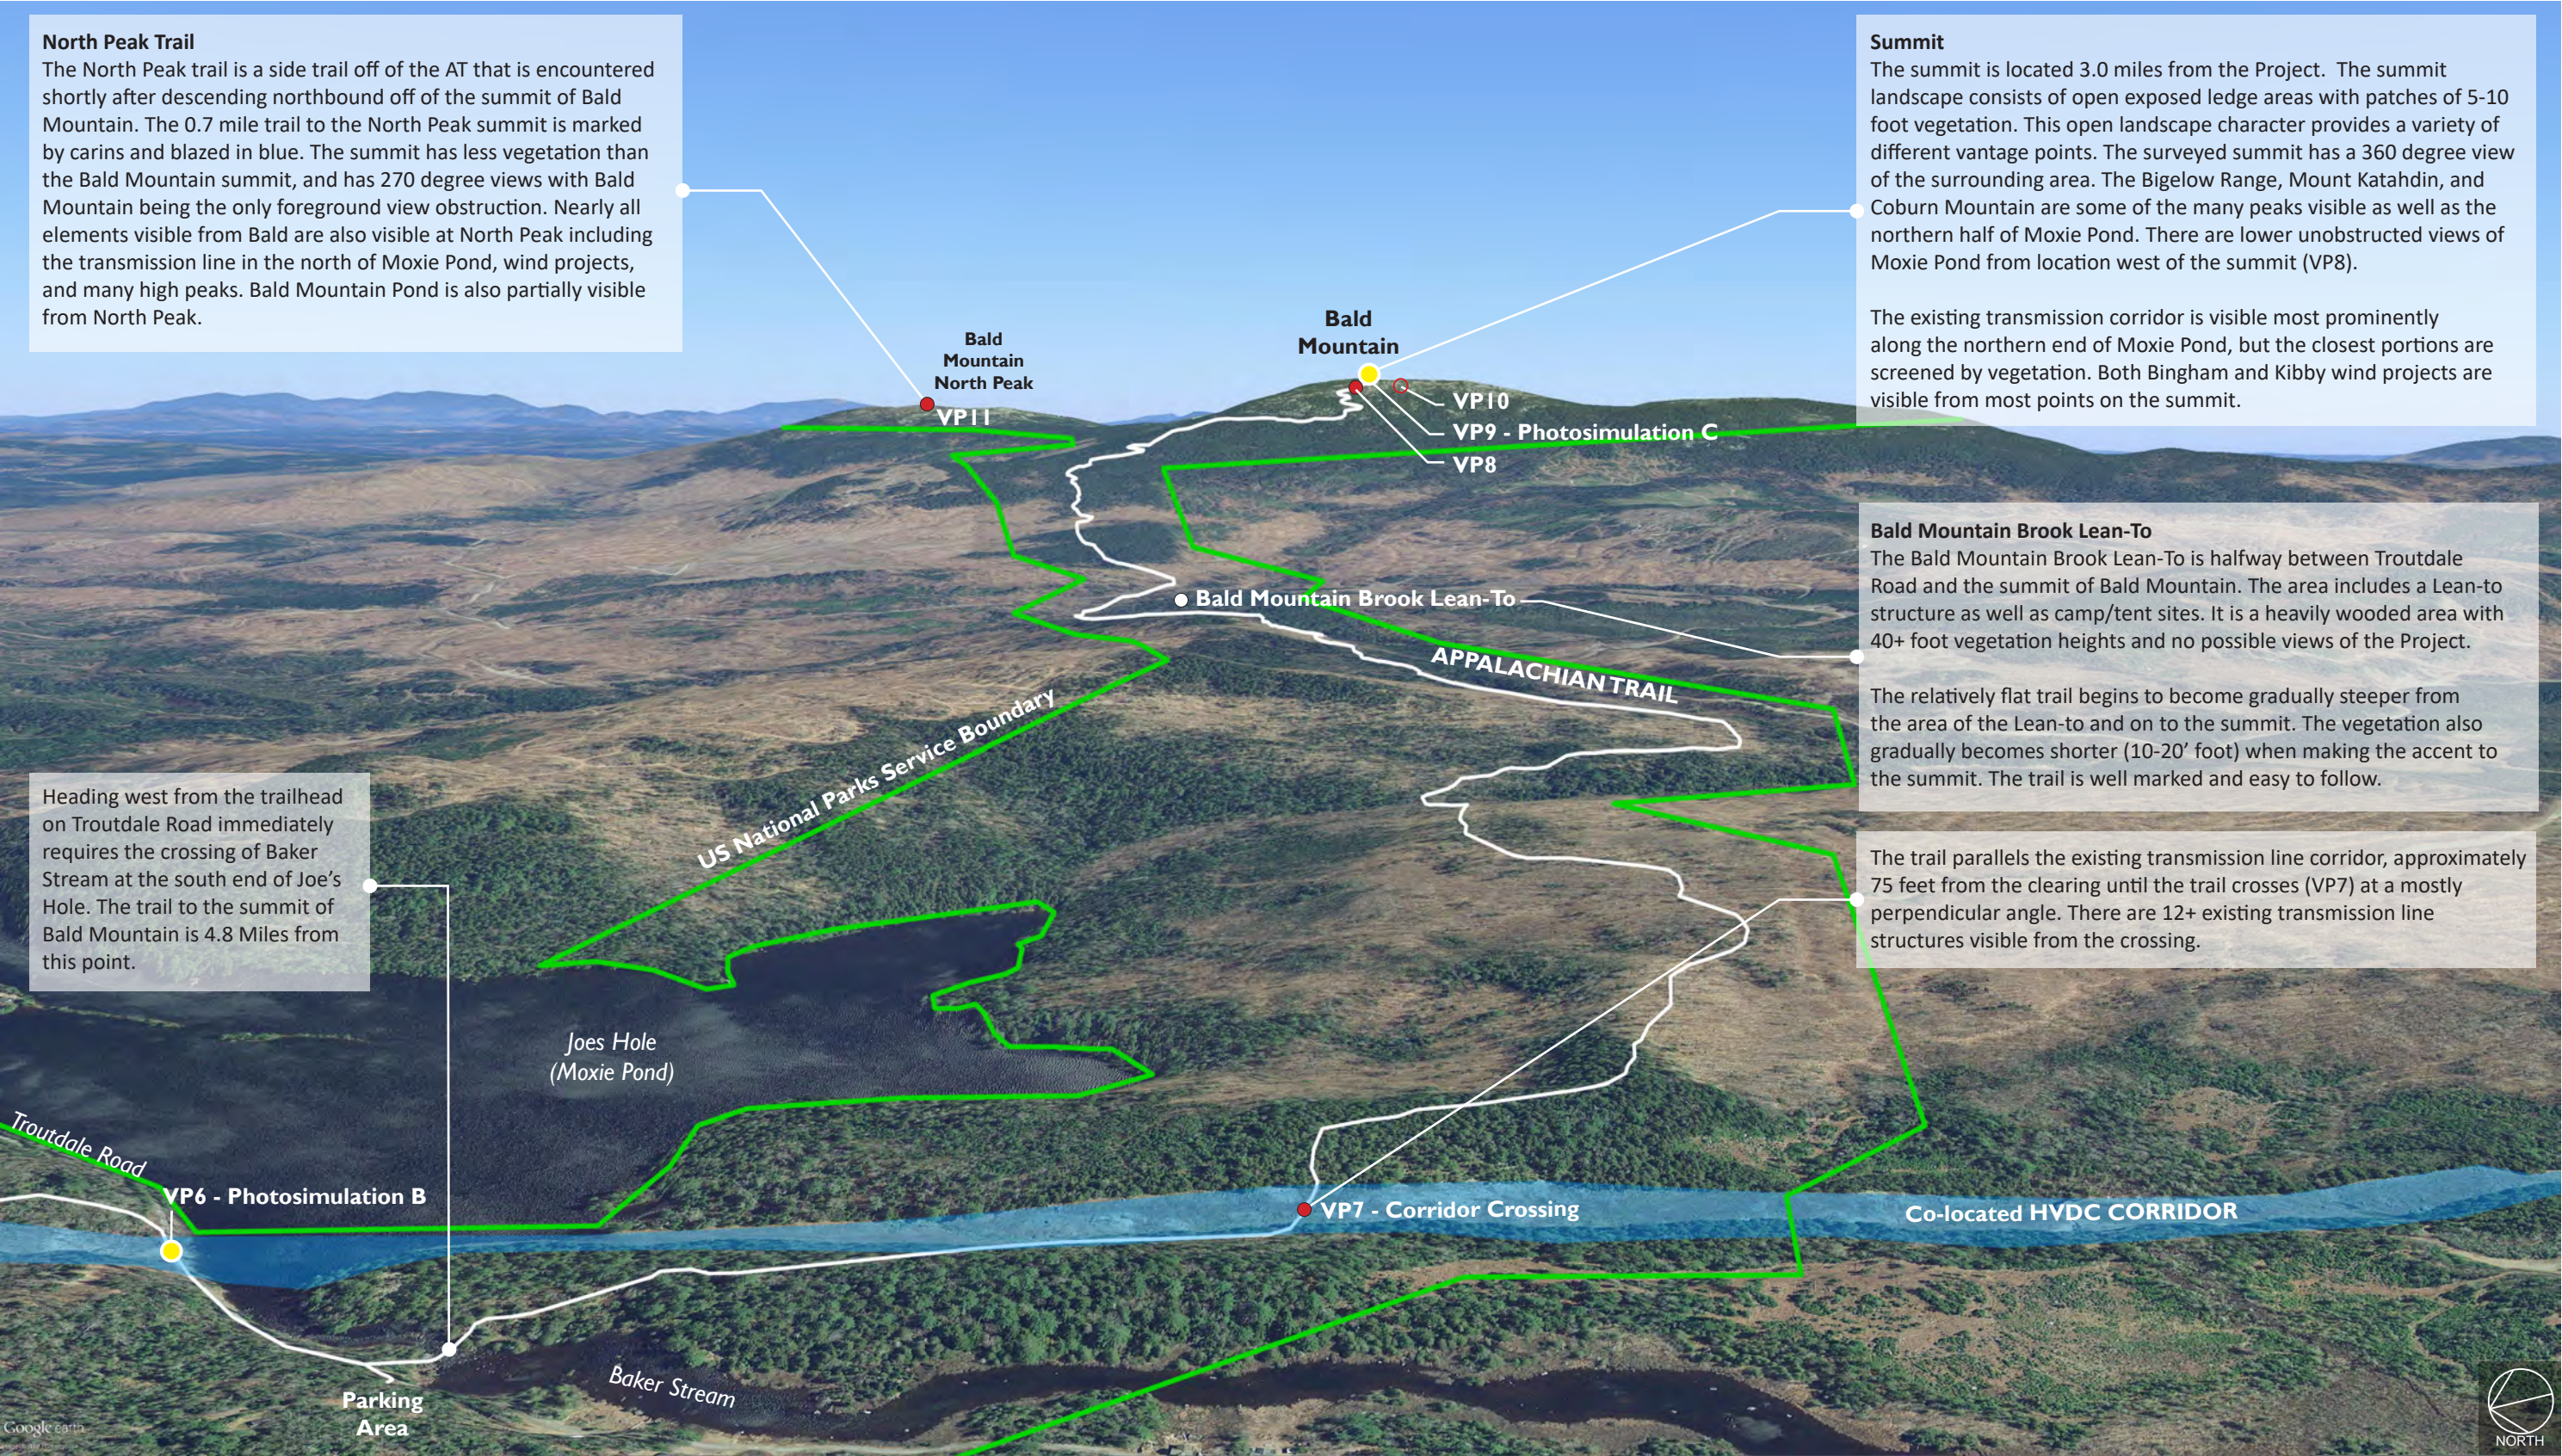

Photo 9: A sign marks where the AT splits from Troutdale Road toward Baker Stream and the trail to Bald Mountain

Photo 10: Hikers must carefully ford the stream before advancing to Bald Mountain. This can be difficult in high water.

TROUTDALE ROAD TO BALD MOUNTAIN

Google Earth image with Baker Stream and Troutdale Road in the foreground, and Bald Mountain in the background.

VIEWPOINT 7: APPALACHIAN TRAIL CROSSING, Bald Mountain Twp

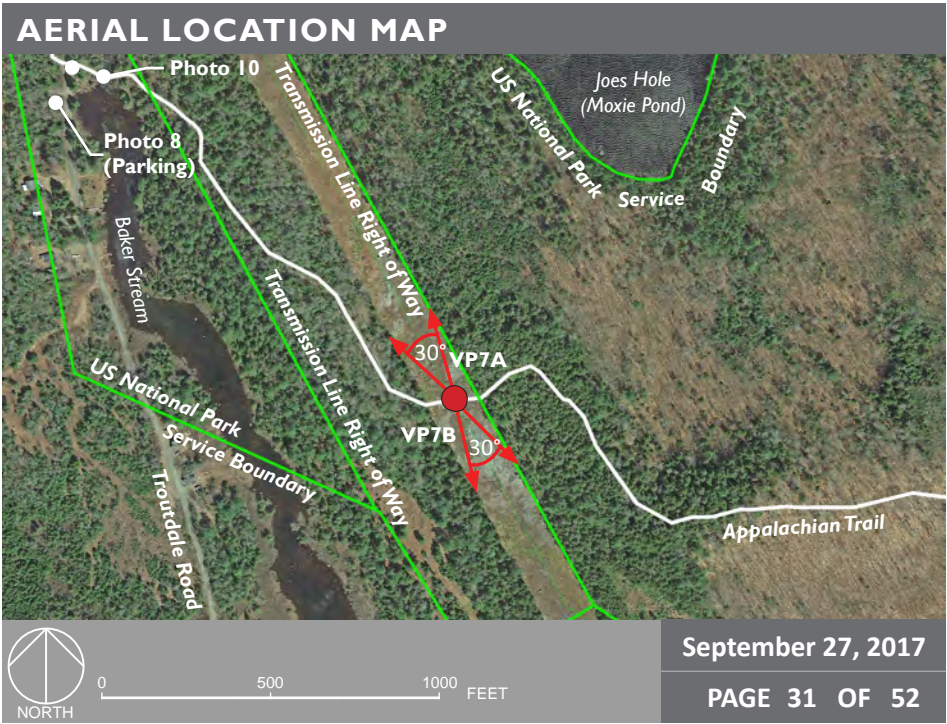

VP7.A: A panoramic view looking northwest towards Joe's Hole (Moxie Pond) at the intersection of the AT and the existing transmission line corridor. The existing 150' wide transmission line clearing will be widened by 75' on the western side (to right of clearing in image above) to accommodate the Co-located HVDC transmission line corridor. There will be 3-4 structures visible in the proposed co-located HVDC transmission line corridor from this viewpoint.

VP7.B: A panoramic view looking southeast towards Joe's Hole (Moxie Pond) at the intersection of the AT and the existing transmission line corridor. There will be 2-3 structures visible in the proposed co-located HVDC transmission line corridor from this viewpoint.

Photographs taken on 6/7/2017 at 1:34am

BALD MOUNTAIN BROOK LEAN-TO, Bald Mountain Twp

Photo 11: The Bald Mountain Brook Lean-To is located in a heavily wooded area with 40+ foot vegetation heights and no possible views of the Project.

Photo 12: The campsite and tent site area is located nearby the Lean-To.

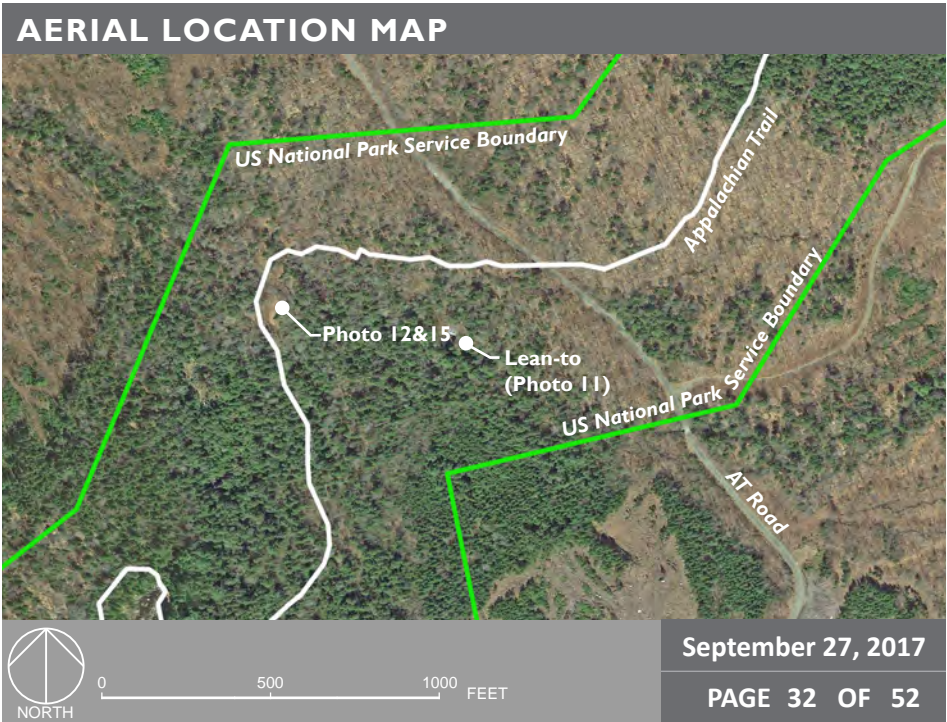

Photo 13: Trail character between Bald Mountain Brook Lean-To and the summit of Bald Mountain.

Photo 14: Trail character between Bald Mountain Brook Lean-To and the summit of Bald Mountain.

Photo 15: A sign directs hikers towards the Lean-To.

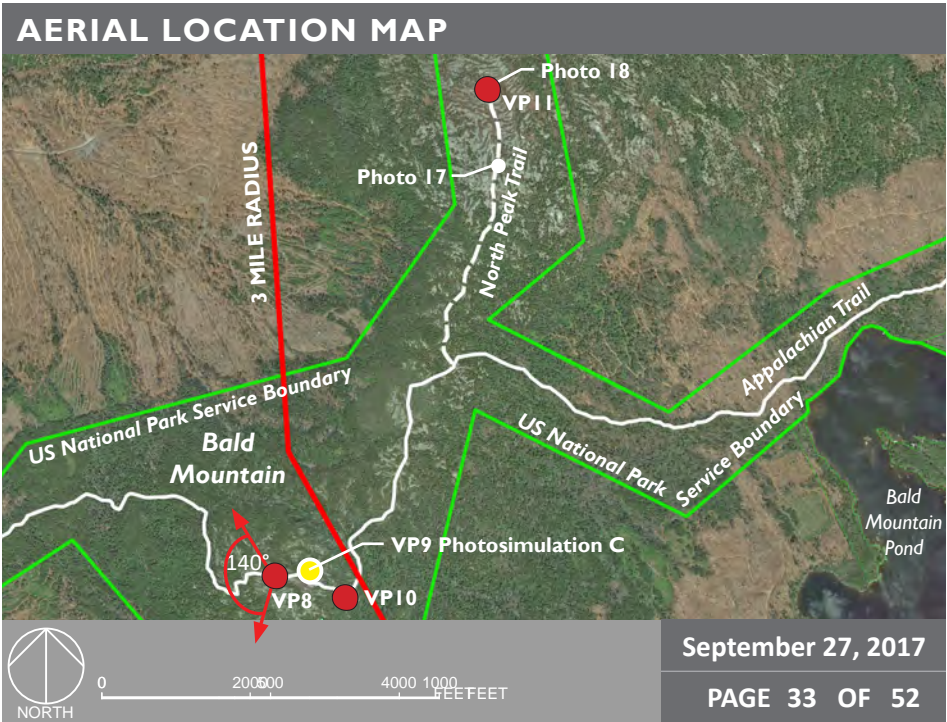

VIEWPOINT 8: NEAR BALD MOUNTAIN SUMMIT, Bald Mountain Twp

VP8.A: A portion of a panoramic view looking south to southwest from a point on the Appalachian Trail, 375 feet west of the summit of Bald Mountain. This area is the first point on the trail that sweeping views of Moxie Pond (below), Moxie Mountain, and the surrounding area are visible on Bald Mountain. Large open areas of exposed ledge outcropping and small intermittent patches of spruce/fir forest are characteristic of the landscape between this viewpoint and the summit of Bald Mountain. The closest proposed structures will be visible in the co-located HVDC transmission line at a distance of 2.8 miles away.

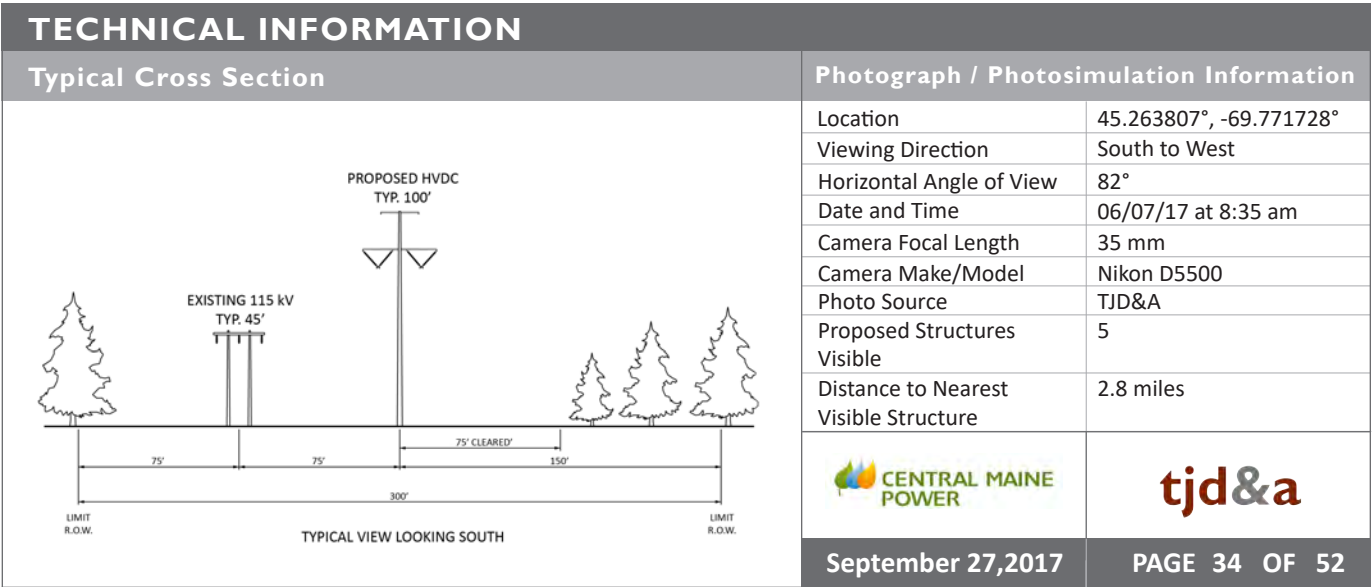

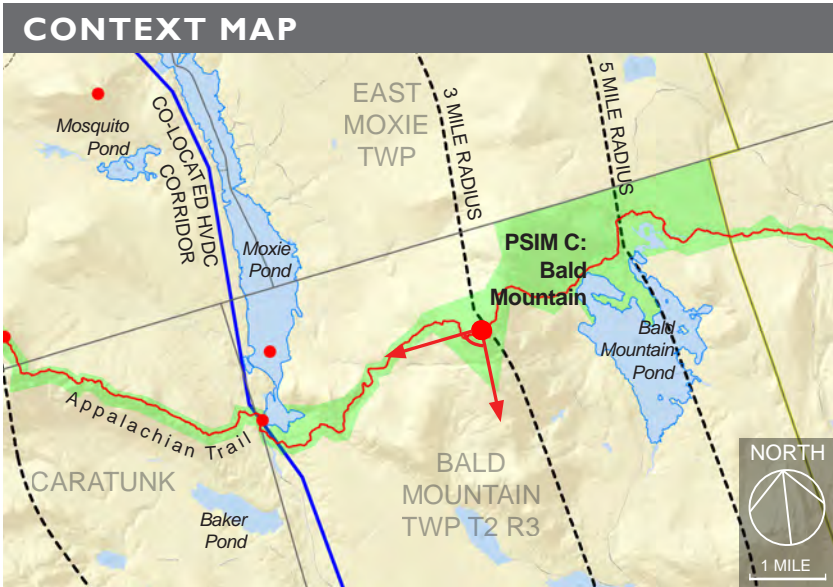

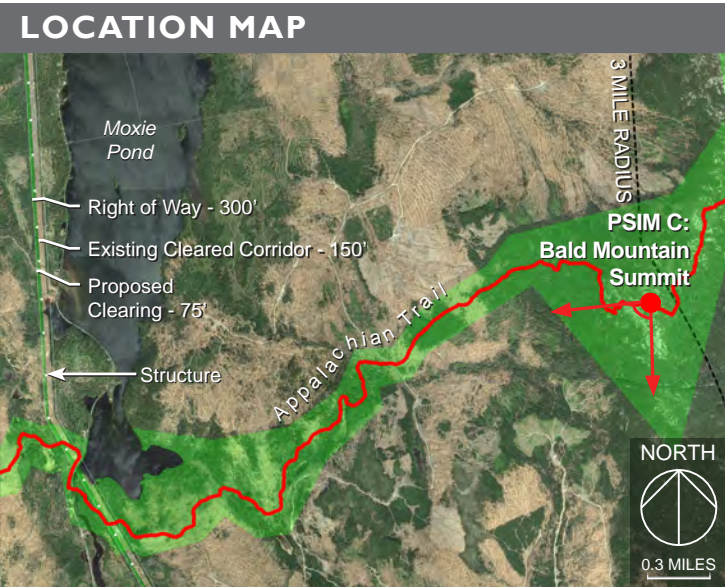

VP8.B: A continuation of a panoramic view looking southwest to northwest approaching the summit from a point on the AT, 375 feet west of the summit. In addition to Moxie Pond, open views of Pleasant Pond Mountain on the left side of the image, and Mosquito Mountain on the right side of the image, are visible from this point. The closest proposed structures will be visible in the co-located HVDC transmission line at a distance of 2.8 miles.

VIEWPOINT 9 PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain TWP

Proposed Conditions: Panoramic view looking from south to west from the summit of Bald Mountain on the Appalachian Trail in Bald Mountain TWP toward the proposed co-located HVDC transmission line. Moxie Mountain is visible is on the left side of the image with Baker Pond visible below. Pleasant Pond Mountain is visible in the center of the image. Mosquito Mountain is visible on the right side of the image.

VIEWPOINT 9 PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain TWP

Existing Conditions: Normal view looking south from the summit of Bald Mountain.

VIEWPOINT 9 PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain TWP

Proposed Conditions: Normal view looking south from the summit of Bald Mountain toward the proposed co-located HVDC transmission line. The corridor will be partially visible at a distance of 7.5 miles.

September 27, 2017

VIEWPOINT 9 PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain TWP

Highlighted Location of
Proposed Co-Located HVDC Corridor

Proposed Conditions: Normal view looking south from the summit of Bald Mountain toward the proposed co-located HVDC transmission line. The corridor will be partially visible at a distance of 7.5 miles. The proposed co-located HVDC corridor location has been highlighted for reference.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Existing Conditions: Normal view looking southwest from the summit of Bald Mountain Summit. Moxie Mountain is visible in center of image with Baker Pond visible below.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Proposed Conditions: Normal view looking southwest from Bald Mountain Summit. The corridor will be partially visible at a distance of 2.8 miles.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

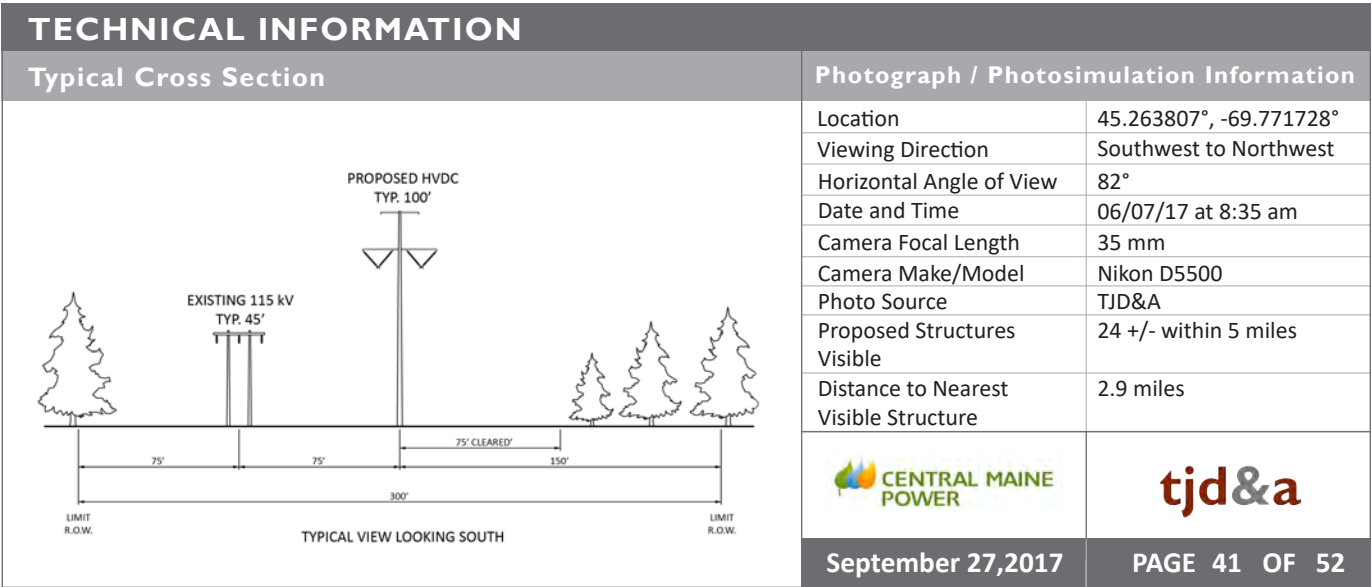

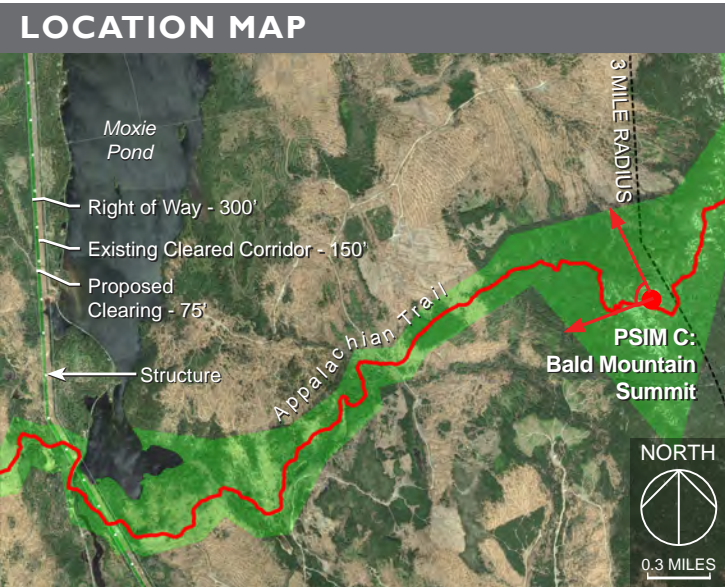

Proposed Conditions: Normal view looking Northwest from Bald Mountain Summit. The corridor will be partially visible at a distance of 2.8 miles. The proposed co-located HVDC corridor location has been highlighted for reference.

VIEWPOINT 9 PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain TWP

Proposed Conditions: Panoramic view looking from southwest to northwest from the summit of Bald Mountain on the Appalachian Trail in Bald Mountain TWP toward the proposed co-located HVDC transmission line. Pleasant Pond Mountain is visible on the left side of the image. Mosquito Mountain and Moxie Pond are visible on the right side of the image.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Existing Conditions: Normal view looking southwest from the summit of Bald Mountain Summit in Bald Mountain Twp toward the proposed co-located HVDC transmission line. Pleasant Pond Mountain is visible on right side of image above.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Proposed Conditions: Normal view looking southwest from Bald Mountain Summit. The co-located HVDC corridor will be visible at a distance of 3.0 miles.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Proposed Conditions: Normal view looking southwest from Bald Mountain Summit. The co-located HVDC corridor will be visible at a distance of 3.0 miles. The proposed co-located HVDC corridor location has been highlighted for reference.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Existing Conditions: Normal view looking west from the summit of Bald Mountain Summit. Pleasant Mountain is visible on left side in image above and Moxie Pond below.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Proposed Conditions: Normal view looking west from Bald Mountain Summit. The proposed co-located HVDC corridor will be partially visible on the far side of Moxie Pond at a distance of 3.1 miles.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Proposed Conditions: Normal view looking west from Bald Mountain Summit. The proposed co-located HVDC corridor will be partially visible on the far side of Moxie Pond at a distance of 3.1 miles. The proposed co-located HVDC corridor location has been highlighted for reference.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Existing Conditions: Normal view looking northwest from the summit of Bald Mountain Summit. Mosquito Mountain is visible in the center of the image above.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Proposed Conditions: Normal view looking northwest from Bald Mountain Summit. The proposed co-located corridor will be visible on the far side Moxie Pond at a distance of 3.4 miles. The widened corridor will be visible where the existing corridor is visible.

PHOTOSIMULATION C: BALD MOUNTAIN SUMMIT, Bald Mountain Twp

Proposed Conditions: Normal view looking northwest from Bald Mountain Summit. The proposed co-located corridor will be visible on the far side Moxie Pond at a distance of 3.4 miles. The widened corridor will be visible where the existing corridor is visible. The proposed co-located HVDC corridor location has been highlighted for reference.

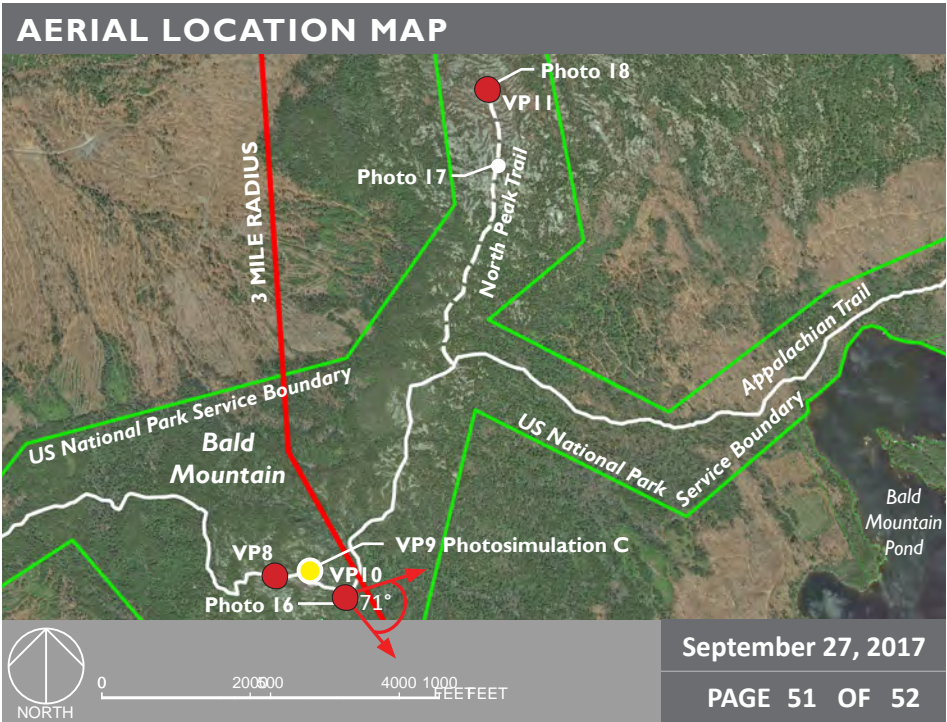

VIEWPOINT 10: BALD MOUNTAIN POND VIEW, Bald Mountain Twp

VP10: A panoramic view looking east to southeast towards Bald Mountain Pond. This view is located at the start of the descent northbound off of Bald Mountain, and faces in the opposite direction of the proposed Project. There will be no Project views from this location.

Photo 16: View looking southeast next to Viewpoint 8. The Bingham Wind Project is visible through an opening in the low vegetation.

VIEWPOINT 11: BALD MOUNTAIN NORTH PEAK, Bald Mountain Twp

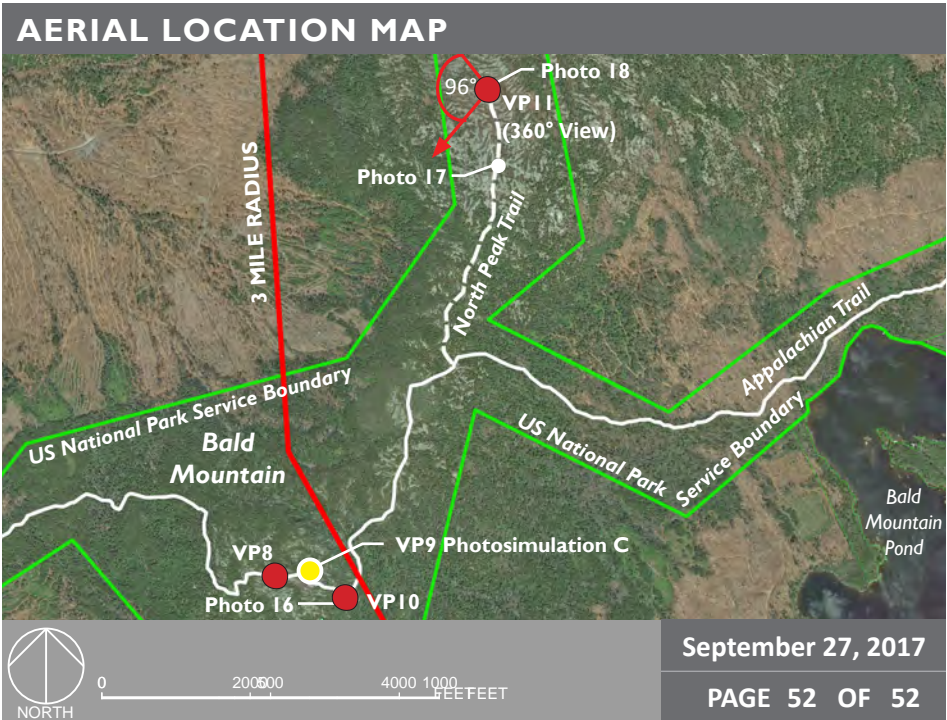

VP11: A panoramic view looking northwest to southwest from North Peak. The summit has less vegetation than the Bald Mountain summit, and has 270 degree views with Bald Mountain being the only foreground view obstruction. Nearly all elements visible from Bald are also visible at North Peak. Moxie Pond, Pleasant Pond Mountain, and Mosquito Mountain are some of the closest visible elements in this view. The proposed co-located HVDC transmission line will be visible from this location at 3.5 miles.

Photo 17: View looking north at North Peak. The 0.7 mile trail to the North Peak is blazed in blue and marked by carins.

Photo 18: View looking southeast from the North Peak. Bald Mountain is visible on the right and a small portion of Bald Mountain Pond is visible on the left. The Bingham Wind Project is visible in the distance in the center of the image.

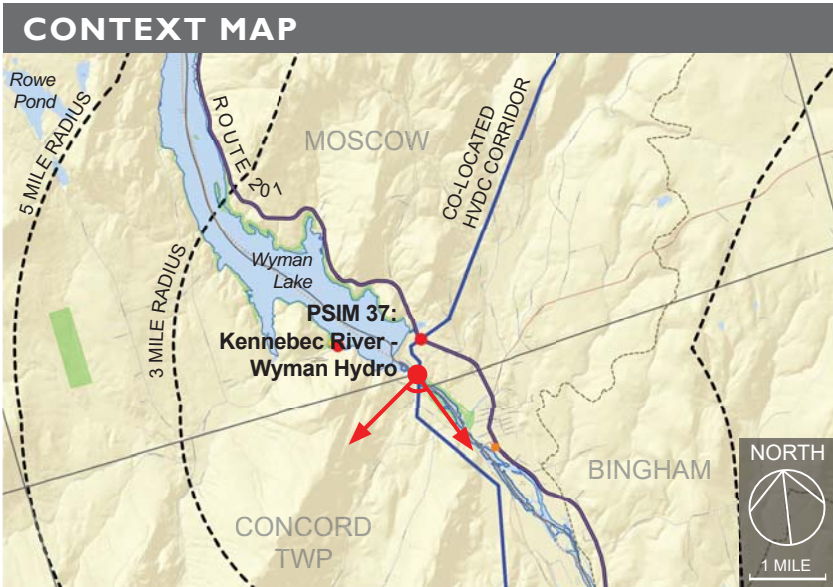

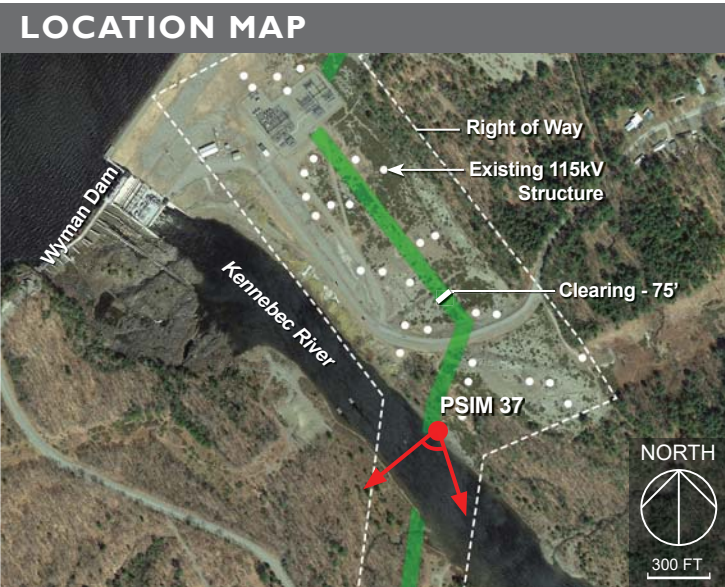

PHOTOSIMULATION 37: KENNEBEC RIVER - WYMAN HYDRO, Moscow

DRAFT

Existing Conditions: Panoramic view looking south to west from the northern shore of the Kennebec River toward the existing 115 kV transmission line.

PHOTOSIMULATION 20:WYMAN LAKE RECREATION AREA, Pleasant Ridge Plt

Proposed Conditions: Panoramic view looking from northeast to southeast from the Wyman Lake Recreation Area toward the proposed co-located HVDC transmission line. The proposed HVDC transmission line would be visible adjacent to the existing 115 kV transmission line and seen in context with the Wyman Hydro Dam and portions of six Bingham Wind turbines. Three HVDC transmission structures and conductors will be visible at distances of 0.9 - 1.3 miles from this viewpoint. See Appendix B: Study Area Photographs for additional images.

PHOTOSIMULATION 20A:WYMAN LAKE RECREATION AREA, Pleasant Ridge Plt

Existing Conditions: Normal view looking east from the Wyman Lake Recreation Area towards the Wyman Hydro Dam.

PHOTOSIMULATION 20A:WYMAN LAKE RECREATION AREA, Pleasant Ridge Plt

Proposed Conditions: Normal view looking east from the Wyman Lake Recreation Area toward the proposed co-located HVDC transmission line. The proposed HVDC transmission line would be visible adjacent to the existing 115 kv transmission line and seen in context with the Wyman Hydro Dam and portions of six Bingham Wind turbines. Three structures, conductors, and portions of the cleared corridor will be visible at distances of 0.9 - 1.3 miles from this viewpoint.
