<sup>1</sup> (IFW) = Status was determined by MDIFW, provided in correspondence on 12/20/17. (ID) = Status was determined previously by MDIFW under the MPRP Project

<sup>2</sup> Percent Total Impact reflects the area impacted (i.e., permanent fill, temporary fill, and forest conversion) within the 250 foot Significant Vernal Pool Habitat, excluding overlapping impact types.

<sup>3</sup> Pool depression is located outside of CMP-controlled land, however, the buffer extends onto CMP-controlled land.

Cumulative Impacts (sq ft)							
Impacts to Pool		Impacts to Upland Areas within 250'			Impacts to Wetlands within 250'		
Pool Direct Impacts	Pool Clearing Impacts	Upland Direct Impacts	Upland Temp Impacts	Upland Clearing Impacts	Wetland Direct Impacts	Wetland Temporary Impacts	Wetland Clearing Impacts
0	70,479	31,320	515,457	1,363,864	32,365	83,113	169,884

### Footnotes for the NECEC Waterbody Crossing Table (Exhibit 7-7)

**General Notes:** The waterbody crossing table is based on data collected in the field, input from agency representatives during consultation, USGS National Hydrography dataset and ESRI ArcGIS mapping services.

1. Stream names are based on the USGS National Hydrography dataset. Tributary names were assigned based on review of watershed areas and drainage patterns.
2. Waterbody crossings widths were based on field data collected in 2015, 2016 and 2017.
3. Stream types: Perennial (PER) or Intermittent (INT). Open Water (Open Water). Stream types were based on field data collected in 2015, 2016 and 2017.
4. State of Maine Water Quality Classifications

Source: The Bureau of Land Resources and Water Quality- Waterbody Statutory Classification dataset

<http://www.maine.gov/dep/gis/datamaps/>

#### **Class**

**AA Class AA** shall be the highest classification and shall be applied to waters which are outstanding natural resources and which should be preserved because of their ecological, social, scenic, or recreational importance. Class AA waters shall be of such quality that they are suitable for the designated uses of drinking water after disinfection, fishing, recreation in and on the water and navigation and as habitat for fish and other aquatic life. The habitat shall be characterized as free flowing and natural.

**A Class A** waters shall be of such quality that they are suitable for the designated uses of drinking water after disinfection; fishing; recreation in or on the water; industrial power generation, except as prohibited under Title 12, section 403; and navigation; and as habitat for fish and other aquatic life. The habitat shall be characterized as natural.

**B Class B** waters shall be of such quality that they are suitable for the designated uses of drinking water supply after treatment; fishing; recreation in and on the water; industrial processes and cooling water supply; 403; and navigation; and as habitat for fish and other aquatic life. The habitat shall be characterized as unimpaired.

**C Class C** waters shall be of such quality that they are suitable for the designated uses of drinking water supply after treatment; fishing; recreation in and on the water; industrial process and cooling water supply; hydroelectric power generation, except as prohibited under Title 12, section 403; and navigation; and as a habitat for fish and other aquatic life.

**GPA Class GPA** shall be the sole classification of great ponds and natural ponds and lakes less than 10 acres in size. Class GPA waters shall be of such quality that they are suitable for the designated uses of drinking water after disinfection, recreation in and on the water, fishing, industrial process and cooling water supply, hydroelectric power generation and navigation, and as habitat for fish and other aquatic life. The habitat shall be characterized as natural.

N/A or “Not Available” indicates that a classification for this waterbody was not available from the referenced source.

5. Source: Cushing, E. Atlantic Salmon: Critical Habitat dataset. 1994. National Oceanic Atmospheric Administration (NOAA) National Marine Fisheries Service (NMFS). <http://www.nmfs.noaa.gov/gis/data/critical.htm#ne>. Accessed May 16, 2017.
  - a. This dataset represents critical habitat for the Gulf of Maine distinct population segment of Atlantic salmon as designated by *Federal Register* Vol. 74, page 29300, June 19, 2009.
6. Source: Bruchs, C. Atlantic salmon habitat. GISVIEW.MEGIS.Ashab3\_new. 2016. Maine Office of GIS Data Catalog. Edition 2016-03-31. <http://www.maine.gov/megis/catalog/>. Accessed May 16, 2017.
  - a. This dataset is meant to be used in tracking general Atlantic salmon habitat survey work on selected Maine streams by staff of the Maine Dept. of Marine Resources - Division of Sea Run Fisheries and Habitat as well as others involved in Atlantic Salmon research, management and conservation. This dataset is designed to be used in a variety of management and planning activities including habitat protection efforts.
7. The Brook Trout classifications were provided as a GIS shapefile by MDIFW. “Y” or “YES” = “Likely Brook Trout Habitat” which identifies waterbodies which have been surveyed and mapped by the MDIFW. “N/A” or “Not Available” identifies waterbodies that have not been surveyed or mapped by the resource agency.
8. The width of the additional corridor clearing required is the average width of tree clearing required for that associated Segment.
9. Where temporary equipment crossings are proposed, no in-stream work will take place. The bridges will be designed to span the entire width to avoid in-stream work.
