

MGL's Filing April 23, 2020 at 4:25 p.m.

**Contains Exhibits A through E and David Black's Rebuttal Testimony 1/16/20**

The following documents that were not admitted to the record have been redacted (Fifteenth Procedural Order).

- Email to DMR Commissioner Patrick Keliher dated March 2, 2020 requesting an adjudicatory hearing on Nordic's applications, and incorporating a January 23, 2020 email to Denis-Marc Nault at DMR providing information on mercury contamination in Penobscot Bay to DMR; and
- March 2, 2020 letter from Ms. Tucker to Commissioner Keliher requesting that DMR conduct an adjudicatory hearing on Nordic's proposed project.

# **EXHIBIT**

**A**

## STATEMENT OF WAYNE CANNING

My name is Wayne Canning and I am the District 11 representative for the State of Maine Zone D Lobster Management Policy Council. I represent 100 lobster fishermen in this area. (Attached is list of names and commercial lobster license numbers of all fishermen that I represent in Zone D, District 11). The purpose of this statement is to provide concerns and facts to the Maine Board of Environmental Protection regarding the licensing request for intake and discharge pipes proposed by Nordic Aquafarms for their RAS project located in Belfast and Northport.

While every fisherman in Zone D and in Penobscot Bay would be adversely impacted by this project, those individuals in my District, District 11, would be impacted the most. As I discuss this project with fishermen regularly, it is very clear that a majority of the fishermen working in the area of this proposed pipe are very concerned and opposed to this project.

Local fishermen have the best knowledge of the conditions in the bay, and have seen the impacts of other similar projects which have caused great harm to the environment in Upper Penobscot Bay. Examples follow:

- Periodic dredging at Mack point in Searsport causes lobster production to decline in areas close to the projects.
- The dredging of Belfast Harbor in 2003 caused a sharp decline in lobster production that lasted for a decade. (See attached letter from DELA).
- The placement of a sewer pipeline across Belfast Harbor in the year 2000 stopped lobster migration into the inner harbor and up the river. This area had previously been very productive lobster fishing, and has never returned to its earlier production.

The Nordic Aquafarms pipeline as proposed will affect lobster fishing in Upper Penobscot Bay in the following ways:

- Dredging and blasting for construction of this pipeline will cause lobsters to avoid the area the same as it does in any other dredging project.
- Buried mercury is a known contaminant in the bottom sediment in this area. This mercury contaminated sediment, found to be in this location during the federal court's Penobscot River Mercury Study, will obviously be disturbed not only by dredging and blasting, but by the continuous operation of this pipeline.
- The Penobscot River is now closed to all lobster and crab fishing as far South as Stockton Harbor due to methyl mercury contamination found in samples of the lobsters and crabs taken from that area. This contamination was caused by buried mercury in the river being dislodged solely by river currents. When that area was closed, several fishermen including myself were displaced and can no longer fish there. WE DO NOT WANT THE SAME THING TO HAPPEN IN BELFAST BAY BECAUSE OF THE NORDIC AQUAFARMS PIPELINE, IT'S CONSTRUCTION AND IT'S OPERATION.
- As any fisherman can tell you, lobsters are very sensitive to even slight changes in the environment. This project proposes to dump enormous amounts of brackish and warm water (15°-18° Celcius; 59°-64.4° Fahrenheit) into a small area of Belfast Bay. This alone will cause lobsters and crabs to move away and not return to the area. Many fishermen will be displaced by the impacts of this project. Due to the very territorial nature of the lobstering society, it is almost impossible to relocate your fishing business to someone else's area. Many conflicts would arise.
- Interestingly, this pipeline is located just over 1 mile from the proposed dump site for the Searsport Harbor Improvement Dredge Project that resulted in huge controversy and was finally canceled because it would have caused so much destruction to the environment. THE NORDIC AQUAFARMS PROJECT SHOULD NOT BE APPROVED FOR VERY SIMILAR REASONS.

Lobster landings in this area have doubled in the last decade when there has been no disruption of the bottom sediments. (see State landings data for Waldo County). Nordic Aquafarms' claims that this area has few lobsters is simply false. While landings in this area are lower than other areas of the state, it is a

very important industry for Waldo County. Remember that this is a very small area, and up to 100 fishermen make a living here year in and year out. The lobster landings by these 100 fishermen are worth 3 to 5 times the amount of those landings to the local Midcoast economy according to the Maine Lobster Institute. This is a significant economic contribution to the Maine economy that will be lost if this project is allowed to proceed.

Additionally, there are several local fishermen who fish for crabs in the winter months that would be adversely impacted by this project – as would the other local businesses that then sell the catch these lobstermen bring in.

Underwater pipelines have been the root and cause of many environmental disasters over time, and this project will be no different. The few jobs that may be created by this pipeline on the mainland will be more than offset by the displaced fishermen and lost jobs of the fishermen in my District. The ripple effect in the restaurant and tourism industries will also be significant.

As the fishermen's representative in this area, I ask that you do not approve any permits for the Nordic Aquafarms pipeline proposal.

Sincerely,  
Wayne Canning  
Zone D District 11 representative

A handwritten signature in black ink that reads "Wayne Canning". The signature is fluid and cursive, with "Wayne" on the first line and "Canning" on the second line, which is slightly higher.

**Rc: Searsport Harbor Dredging Project**

Dear Ms. Blumeris,

Our first and most important reason for writing this letter is to request a full Environmental Impact Statement to be conducted on the Searsport Harbor Dredging project as well as a public hearing.

We feel that the impact of this dredging project could have an adverse effect on the upper Penobscot Bay. We understand that the maintenance part of this project is a small percentage of the entire project that is being proposed.

The big concern that needs to be addressed comes into the *expansion* of the project. The amount of bottom that will be removed and re-located "down toward the "I - I" Buoy", which is not classified as a "Dumpsite," will have a devastating impact on the lobster fishery in this area.

The maintenance of the existing channel should not be incorporated into an expansion project which has no relevance due to the fact that the LPG tankers will not be using the Searsport Facility.

Our members have been and continue to be involved in environmental studies concerning pollution issues and the impact of it on our marine resources. The balance of our marine eco-system is starting to make a come-back after the devastation of the dredging of Belfast Harbor from the last decade. This recovery has taken "years."

We strongly urge that the scientific and environmental data/impact of this project should be shared with the public, so those that will be directly affected by this will have an opportunity to voice their concerns.

Respectfully Submitted,

*Sheila H. Dassalt*

**Statement of David Black**  
July 10, 2019

**My name is David Black, a resident of Belfast Maine, and a lobster fisherman working from Belfast Harbor for 55 years.**

**Please include the information in this statement as part of the discussion on applications before you regarding the Nordic Aquafarms proposal to construct multiple pipelines into Upper Penobscot Bay in Belfast and Northport for the purpose of providing the intake of seawater and the discharge of effluents from the RAS facility proposed by Nordic Aquafarms to be located in Belfast, Maine.**

**As a local fisherman, I derive a significant portion of my annual income from the area beneath and adjacent to the proposed location of the Nordic Aquafarms pipeline. Therefore, I have considerable local knowledge of the area that I would like to share with you. I am sure that upon a total review of local information regarding this project that you will have many concerns about the environmental dangers and consequences of this proposed pipeline, just as I do.**

**Belfast Bay has a long productive history of fishing which has been diminished over time due to many municipal and industrial pollution sources. These pollution sources include decades of raw municipal sewage disposal from many points around the bay, untreated chicken waste from area poultry plants, fish waste from a long operating fish canning factory as well as mercury contamination in the bay from a facility on the Penobscot River. Add to these several dredging projects in Belfast, Searsport and other ports and you begin to see the degree of pollution this bay has suffered in the past.**

**I will discuss these pollution concerns separately:**

**MUNICIPAL SEWAGE**

**When I was young, raw sewage was a common sight in the bay. In recent decades, the municipal sewage outfalls around the Bay have mostly been identified and corrected. The result has been lower fecal coliform levels and increased availability of clean shellfish resources.**

**INDUSTRIAL WASTE**

**During the 20th century there were 2 poultry processing plants and 1 fish canning factory in Belfast that dumped untreated chicken waste and some fish waste through large pipelines directly into Belfast Harbor. The Harbor was so fouled with this effluent that Belfast Harbor was listed in the U.S.Cost Pilot publication as a harbor to avoid when cruising the Coast of Maine. After the closures of these factories, and the elimination of these discharge pipes, the bay became cleaner and more appealing to the public. However, I can tell you that today the remnants of those discharges remain in the sediment on the bottom of the bay. I believe it will take many a lifetime for this area to completely clean itself.**

**DREDGING**

**In my experience, whenever there was a dredging project at Mack Point in Searsport Harbor, the lobster catch in the area slowed for several years until the environment recovered. Additionally, when Belfast Harbor was dredged in 2003, it took a decade for the environment to**

recover according to a letter from the Downeast Lobstermen's Association to the U.S. Army Corps of Engineers dated May 4, 2013.

Please note that the most recent attempt to dredge Searsport Harbor was cancelled due to environmental concerns.

## MERCURY

Mercury contamination in the bay from unconfined industrial mercury pools in the Penobscot River being moved downriver by the current has resulted in 13 square miles at the mouth of the Penobscot River being closed to all lobster and crab fishing due to methyl mercury contamination in these shellfish. Further studies by the federal court have identified buried mercury in other areas of the bay and specifically in the area of the proposed Nordic Aquafarms pipeline.

Can we now feel comfortable with a new pipeline proposal by Nordic Aquafarms to be constructed in Belfast Bay based upon this history? Each of the aforementioned sources of pollution were the result of projects permitted by the State of Maine and the Federal government over long periods of time.

I can think of several reasons to be very cautious with this project and they are as follows:

- This proposed pipeline is to be located just over a mile from the very controversial and failed proposal to dredge and dispose of sediments from the Searsport Harbor Improvement project in Upper Penobscot Bay.
- Dredging and blasting resulting from this project will produce the same impact as other dredging projects in the area.
- The construction and operation of this pipeline is directly in an area identified as containing buried mercury that would be continuously impacted releasing mercury to be ingested by sea life resulting in further closures of lobster and crab fishing areas where I make my living.
- This project proposes discharging 7.7 million gallons of brackish warm water into the bay every day! I was told by the project manager for this RAS facility that this volume of water equals nearly 50 percent of the total water volume of this RAS facility being discharged daily. An existing RAS system in Maine is run by the University of Maine and the operator of that facility has stated that they discharge only 10 percent of the total water volume daily, a significant difference. This is water that would be heated between 5 and 30 degrees Fahrenheit above the ambient temperature of seawater from the bay ( depending on the time of year ) combined with ground water from wells. It is very unreasonable to assume that this water which has been described by the applicant as cleaner than the water being pumped into the facility from the bay, should be discarded so soon after mixing and heating. This does not sound like a RAS facility at all but rather a flow thru system. This warm and brackish water will cause lobsters to leave the area for more saline and temperate conditions. This concern alone will cause great economic hardship for myself and other local fishermen.

- The chief technical officer for Nordic Aquafarms explained to me one day in his office that all discharge water from this facility will be run through a .4 micron filter before reentering the bay. Again, at the RAS system run by the University of Maine the minimum water filter is 30 microns, almost 80 times larger than the filters being proposed by Nordic. The manager of that facility stated that filters finer than 30 microns would clog quickly and be of no value.

- Nordic Aquafarms has submitted technical data with this application stating that lobsters are absent from this area of the bay. According to DMR statistics, total annual landings of lobsters for Waldo County have nearly doubled in the past decade. The area impacted by this pipeline is essentially the same area of Waldo County that exists in the bay.

As a fisherman working in this bay for 55 years, I have become a mentor for some of the younger fishermen that are hoping to have opportunities to live and prosper on this bay just as I have enjoyed for much of my life. The old timers always told me that it was my responsibility to leave this bay in better condition than when I found it, for the benefit of the next generations, and that is exactly why I am speaking to you today.

Please exercise your responsibilities as representatives of the people of Maine and understand that a better solution for the treatment of waste water from RAS aquaculture must be found other than this out of sight and out of mind pipeline.

Your vote in opposition to this project is in order.

Respectfully submitted

David Black

## **L. SUMMARY OF OTHER GROUNDS FOR DENYING THIS LEASE APPLICATION**

The placement of these pipelines in Penobscot Bay, as proposed by NAF, would have potentially devastating impacts on the environment and economy of the Midcoast region – especially on our commercial fisheries and fishermen, including the iconic Maine lobster fishery in Penobscot Bay – which is the foundation of our economy in this region and the source of thousands of existing well-paying jobs. These adverse impacts include, but are not limited to the following:

- **Disturbing Buried HoltraChem Mercury:** The dredging and blasting required to bury a portion of NAF's pipelines in the Bay would disturb long-buried mercury from HoltraChem's discharges almost fifty (50) years ago. HoltraChem legacy mercury has previously been determined to be buried in this area of the Bay by the federal court's experts who conducted the Penobscot River Mercury Study ("PRMS"). In 2014, the Maine Department of Marine Resources ("DMR") shut down approximately 7 square miles in the lower Penobscot River and upper estuary of Penobscot Bay to all lobstering and crabbing due to the high level of mercury lobsters in this area had in their meat. That closure was based on data collected by the federal court's experts in the Penobscot River Mercury Study (PRMS). In 2016, DMR shut down an additional 5.5 square mile area in the upper Penobscot Bay to all lobstering and crabbing, after finding a mean level of mercury in the tail meat of 40 adult lobsters of 292.7 ng/g, caused by exposure to HoltraChem mercury in the surface sediments south of Verona Island resulting in methyl mercury contamination. 13-188 C.M.R. ch. 25, §25.65. The DMR concluded that any mean levels of mercury in lobster meat, over 200 ng/g, justified its closure of both the lobster and crab fishery (even in the absence of such levels in the crabs in that area). The mercury levels the court's experts determined are found buried beneath the surface sediment in the area NAF proposes to dredge is 200 – 300 ng/g.<sup>1</sup> At the April 24, 2019 Belfast Harbor Committee Meeting, NAF's representative (Ed Cotter) revealed that NAF-commissioned sediment tests (which have not been made public), confirmed a level of 239 ng/g in one core sample that they took in this area and that NAF had failed to test most of the 10 core samples they had taken. During the December 17, 2018 NAF public information meeting, NAF's representative confirmed that the sediment testing method NAF's agents used to do their tests was not the more accurate PRMS sediment testing standard. Indicating that the level of mercury that is buried in this area may be even higher than previously determined, since NAF found 239 ng/g there even using a less accurate sediment testing protocol that was likely to underestimate the

---

<sup>1</sup> The relevant DMR rule states:

**25.65 Lobster and Crab Closure in Penobscot River**

It is unlawful to fish for or take lobsters or crabs by any means from the waters north of a line starting at the western most point of Perkins Point in the Town of Castine continuing in a northwesterly direction to the southern most point of Squaw Point on Cape Jellison in the Town of Stockton Springs. This section does not apply to equipment operated by the Department of Marine Resources.

true level of mercury and its depth under the surface. Re-suspension of the HoltraChem mercury in the area of Penobscot Bay where NAF proposes to dredge and blast could spread methyl-mercury contamination throughout the entire food web of the Bay – destroying the lobster fishery that provides hundreds of lobstermen the ability to make a good living in now, damaging the reputation for wholesomeness of the Maine Lobster brand, harming all people and businesses that depend on the Midcoast lobster catch, and endangering the health and safety of all Midcoast residents and wildlife that live in and around Penobscot Bay.

- **A 5.5-Foot Underwater Wall:** According to NAF's latest schematic drawings for installation of their pipes in the intertidal land and under the Bay's waters, the portion of the pipelines that are not buried will form a wall on the surface of the Bay's bottom off Northport. The three pipes would be covered by gravel and a mesh cover. This configuration would form a wall along the bottom that is roughly 5.5 feet tall and roughly a half-mile long. Lobstermen who fish this area and who have had experience with disruptions to lobster movements caused by prior pipeline placements in Belfast Harbor, advised the Belfast Harbor Committee on April 24, 2019 that NAF's proposed underwater seawall will significantly disrupt the migration of lobsters in and around Penobscot Bay and radically change currents in this area and throughout at least the upper Bay. The effect on shorelines, erosion or navigation is unknown but likely also significant.
- **Contents and Characteristics of the Wastewater:** The impacts of the 7.7 million gallons of wastewater a day that NAF proposes to discharge into Penobscot Bay from these pipelines can also not be ignored when evaluating the impacts on riparian owners' rights and on commercial fishing and fisheries' health.<sup>2</sup> According to the current, new Commissioner of DEP during his January 30, 2019 confirmation hearing, the impacts of this discharge on commercial fisheries is a subject in the jurisdiction of DACF-BPL not a consideration of the DEP during the MEPDES process. However, no information on the nature and predicted impacts of this wastewater discharge has been submitted by NAF, to date, to either agency.
  - **Wastewater Temperature:** The proposed warm temperature of this wastewater (59° to 64.4° Fahrenheit; revealed as 15° - 18° Celcius in the MEPDES permit application) – discharged year round -- is between 5° and 33° Fahrenheit warmer than the Bay's normal temperatures (depending on what time of year it is discharged). If a rise in temperature of the Gulf of Maine or the Bay of 0.5° Fahrenheit can devastate our ecosystems – what could the impact of discharging this volume of wastewater daily, in a relatively shallow embayment and estuary be?! In light of the loss of the lobster fishery in southern portions of New England, attributed to warming waters in those areas, the adverse impacts on the lobster fishery in Penobscot

---

<sup>2</sup> To put this in perspective, the entire community of Bayside's wastewater treatment facility is limited to discharging 7 million gallons a year of treated wastewater into the Bay

Bay would be catastrophic in the upper and western Bay, and potentially wide-ranging throughout the Bay as the water circulates.

- **Nitrogen:** The discharge will contain, according to NAF, 1484 pounds (673 kg) a day of nitrogen, which poses the risk of dangerous algae blooms, fish die-offs, and could put the Bayside Mussel Farm – an existing aquaculture leaseholder in the area of the discharges – out of business.
- **Currents and Circulation:** It will take fourteen days after discharge to leave the immediate area of the outfall pipe to circulate to every corner of Penobscot Bay and then out into the Gulf of Maine. This circulation estimate by NAF's consultant means that in the immediate area of the outfall there will be a constant accumulation of approximately 108 million gallons of wastewater – destroying the viability of the existing mussel farm aquaculture business that thrives in the currently clean waters in this area and harm the use of these waters by all existing riparian owners in this corner of the upper Bay. This NAF current estimate was made without consideration of the impact of prevailing winds and we believe was done prior to the adoption of the re-configuration of the pipelines to an above-ground placement.
- **Salinity Changes:** According to NAF, 15% of the wastewater will be fresh water – permanently changing the salinity of the Bay through man-made alterations.

No one can predict the scope of the adverse impacts that will result from allowing NAF to convert Penobscot Bay into its own giant chemistry experiment, but the impact on the health and reputation of all of Penobscot Bay's fisheries – especially our currently thriving and lucrative lobster fishery – will be significant, long-term and likely devastating. The adverse impacts on the thousands of lobstermen who fish in Penobscot Bay are incalculable, but certainly not off-set by the illusory promise by NAF of "up to" 100 jobs of unspecified salary ranges.

# **E**

## **Rebuttal Testimony**

**Statement of David Black  
JANUARY 16, 2020**

**My name is David Black, a resident of Belfast Maine, and a lobster fisherman working from Belfast Harbor for 56 years.**

**Please include the information in this statement as part of the discussion on applications before you regarding the Nordic Aquafarms proposal to construct multiple pipelines into Upper Penobscot Bay in Belfast and Northport for the purpose of providing the intake of seawater and the discharge of effluents from the RAS facility proposed by Nordic Aquafarms to be located in Belfast, Maine.**

**As a local lobster fisherman, I derive a significant portion of my annual income from the area beneath and adjacent to the proposed location of the Nordic Aquafarms pipeline. Therefore, I feel I have considerable local knowledge of the area and I feel obligated to use this opportunity to share some of that knowledge with you. I am sure that upon your total review of local information regarding this project many concerns will arise concerning the environmental dangers and consequences of this proposed pipeline.**

### **HISTORY**

**Belfast Bay has a long productive history of fishing which has been diminished over time due to many municipal and industrial pollution sources. These pollution sources include decades of raw municipal sewage disposal from many points around the bay, untreated chicken waste from area poultry plants, fish waste from a long operating fish canning factory as well as mercury contamination in the bay from a facility on the Penobscot River. Add to these several dredging projects in Belfast, Searsport and other ports and you begin to see the degree of pollution this bay has suffered in the past.**

**I will discuss these pollution concerns separately:**

#### **Municipal Sewage**

**When I was young, raw sewage was a common sight in the bay. In recent decades, the municipal sewage outfalls around the Bay have mostly been identified and corrected. The result has been lower fecal coliform levels and increased availability of clean shellfish resources.**

#### **Industrial Waste**

**During the 20th century there were 2 poultry processing plants and 1 fish canning factory in Belfast that dumped untreated chicken waste and some fish waste through large pipelines directly into Belfast Harbor. The Harbor was so fouled with this effluent that Belfast Harbor was listed in the U.S. Coast Pilot publication as a harbor to avoid when cruising the Coast of Maine. After the closures of these factories, and the elimination of these discharge pipes, the bay is cleaner and more appealing to the public and is becoming a destination for many visitors to "Vacationland". However, I can tell you that today the remnants of those discharges remain in the sediment on the bottom of the bay. I believe it will take many a lifetime for this area to completely clean itself.**

### **Dredging**

In my experience, whenever there was a dredging project at Mack Point in Searsport Harbor, the lobster catch in the area slowed for several years until the environment recovered. Additionally, when Belfast Harbor was dredged in 2003, it took a decade for the environment to recover according to a letter from a prominent Lobster fishermen's Association to the U.S. Army Corps of Engineers dated May 4, 2013.

Please note that the most recent attempt to dredge Searsport Harbor was cancelled due to environmental concerns.

### **Mercury Contamination**

Mercury contamination in the bay from decades of unconfined industrial mercury pools in the Penobscot River being moved downriver by the current has resulted in 13 square miles at the mouth of the Penobscot River being closed to all lobster and crab fishing due to methyl mercury contamination in these shellfish. Further studies by the federal court that is reviewing the source of that pollution have identified buried mercury in other areas of the bay and specifically in the area of the proposed Nordic Aquafarms pipeline.

### **IMPACTS OF THIS PROJECT**

Can we now feel comfortable with a new pipeline proposal by Nordic Aquafarms to be constructed in Belfast Bay based upon this history? Each of the aforementioned sources of pollution were the result of projects permitted by the State of Maine and the Federal government over long periods of time.

I can think of several reasons to be very cautious with this project and they are as follows:

- This proposed pipeline is to be located just over a mile from a recent and very controversial failed attempt to dredge Searsport Harbor.
- Dredging and blasting resulting from this project will produce the same impact as other dredging projects in the area.
- The construction and operation of this pipeline is directly in an area identified as containing buried mercury that would be continuously impacted releasing mercury to be ingested by sea life resulting in further closures of lobster and crab fishing areas where I make my living.

### **CONCERNS**

This project proposes discharging 7.7 million gallons of brackish and warm water into the bay every day! I was told by the project engineer for this RAS facility that this volume of water equals nearly 50 percent of the total water volume of this RAS facility being discharged daily. There is presently a RAS system located in Franklin, Maine which is run by the University of Maine. The operator of that facility has stated that they discharge only 10 percent of the total water volume daily, a significant difference from what Nordic is proposing. This is water that would be heated to between 5 degrees Fahrenheit and 30 degrees Fahrenheit above the ambient temperature of seawater from the bay ( depending on the time of year ) combined with ground water from wells. It is very unreasonable to assume that this water which has been described by the applicant as cleaner than the water being pumped into the facility from the bay, should be discarded so soon after mixing and heating. This does not sound like a RAS

facility at all but rather a flow thru system. It is my opinion that the discharge of this warm and brackish water will cause lobsters to leave the area for more saline and temperate conditions. This concern alone will cause great economic hardship for myself and other local fishermen.

- The chief technical officer for Nordic Aquafarms explained to me one day in his office that all discharge water from this facility will be run through a 0.4 micron filter before reentering the bay. Again, at the RAS system run by the University of Maine the minimum water filter is 30 microns, almost 80 times larger than the filters being proposed by Nordic! The manager of that facility stated that filters finer than 30 microns would clog quickly and be of no value.

- Nordic Aquafarms has submitted technical data with their applications stating that lobsters are absent from this area of the bay. According to DMR statistics, the total annual landings of lobsters for Waldo County have nearly doubled in the past decade. The proposed location of this pipeline is where this reported resource exists and thrives.

- The present design of the pipeline indicates an elevated structure secured by chains and anchors. These anchors are proposed to be attached in the silty bottom sediment directly in an area of methane pockets which have been determined by state geologists to be unstable.

-Traditionally this very area of the Bay has been an occasional anchorage area for ocean going ships that for various reasons choose not to anchor closer to the port of Searsport.

As a fisherman working on this bay for 56 years, I have become a mentor for some of the younger fishermen that are hoping to have opportunities to live and prosper on this bay , similar to those which I have enjoyed for much of my life. The old timers always told me that it was my responsibility to leave this bay in better condition than when I found it, for the benefit of the next generations, and that is exactly why I am speaking to you today. The construction of this pipeline will do nothing to improve the health and viability of Upper Penobscot Bay and will only serve to diminish the quality of life presently essential for the survival of its' many inhabitants.

Please exercise your responsibilities as representatives of the people of Maine and understand that a better solution for the treatment of waste water from RAS aquaculture must be found other than this out of sight and out of mind pipeline. Your vote in opposition to this project is in order.

**I CERTIFY THAT UNDER PENALTY OF PERJURY THAT THE FOREGOING STATEMENT IS TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE AND BELIEF.**

Respectfully submitted

  
David Black

PETITION TO INTERVENE  
FILED ON BEHALF OF  
THE MAINE LOBSTERING UNION,  
WAYNE CANNING, AND  
DAVID BLACK

City of Belfast and Town of Northport, Waldo County  
Submitted: July 10, 2019

---

The Maine Lobstering Union (“IMLU”), a cooperative corporation, organized and doing business in the State of Maine; Wayne Canning, Zone D Lobster Council Representative for District 11 Lobstermen and a Maine commercial lobster and crab fishing license holder; and David Black, a Maine commercial lobster and crab fishing license holder fishing in Belfast Bay and Penobscot Bay out of Belfast, Maine (hereinafter “the Petitioners”), pursuant to 5 M.R.S.A. § 9054(1) and 06-096 C.M.R. ch. 3 §11(A)(1), petition to intervene as parties in all proceedings before the Board of Environmental Protection (“BEP” or “the Board”) relating to the above-referenced applications, filed by Nordic Aquafarms, Inc. (“Nordic”).

NAF proposes to construct and operate a land-based salmon fish breeding, maturation and processing plant, on land of or adjacent to the Belfast Water District and adjacent to the Little River (“the Project”), with intake and discharge pipelines located in Belfast Bay and Penobscot Bay within the municipal boundaries of Belfast and Northport, Maine. This facility, as proposed, is an existential economic and environmental threat to Penobscot Bay, the Pen-Bay lobster fishery, and all lobstermen of Zones C and D who fish in or around Belfast Bay and Penobscot Bay. The harms are particularly significant for lobstermen who fish in the upper Penobscot Bay, Belfast Bay, and the western side of Islesboro.

The Petitioners seek leave to intervene pursuant to the Department’s Administrative Rules, Chapter 3, RULES CONCERNING THE CONDUCT OF LICENSING HEARINGS, Section 11, Subsection A, Intervention.

**THE MAINE LOBSTERING UNION (IMLU):**

In support of this Petition, the IMLU asserts the following grounds for intervention set forth below, including but not limited to:

1. The IMLU is Local 207 of the International Association of Machinists and Aerospace Workers (IAMAW), within District Lodge 4 of the IAMAW. The IMLU was incorporated in the State of Maine as a nonprofit fish marketing association. The corporation was organized as a “cooperative corporation” by filing Articles of Incorporation under the Fish Marketing Act, 13 M.R.S.A. §§ 2001-2287, with the Maine Secretary of State, on September 10, 2013.

2. The IMLU is in good standing as an entity according to the Maine Secretary of State. The IMLU's charter number is 20140002CP. For federal tax purposes the IMLU is a "cooperative" under subchapter T of the Internal Revenue Code.
3. The IMLU is an organization comprised of active, licensed lobstermen and sternmen and exists to represent the interests of *only* licensed lobstermen and sternmen (as opposed to other lobster industry participants).
4. The IMLU is the first representative organization organized as a cooperative in Maine to represent lobstermen and sternmen exclusively. The harvesters in the IMLU also have purchased and operate a wholesale and retail business that markets and sells Maine lobsters and crabs harvested by IMLU members and other holders of Maine lobster and crab fishing licenses. The IMLU's business operates under the business name Lobster207.
5. The IMLU represents lobstermen in all Maine Lobster Zones, from Kittery to Cutler, including in Zones C and D, the Zones covering Penobscot Bay, Maine, that would be most directly adversely impacted by this proposed project.
6. The IMLU has members that fish in the area directly, adversely impacted by the pipelines, dredging, blasting and wastewater and effluent dumping proposed by NAF, and in all areas of Zones C and D that will suffer direct, indirect, cumulative, primary, secondary, acknowledged, foreseeable and unforeseeable impacts from this project in the short- and long-terms.

**WAYNE CANNING:**

7. Wayne Canning, is the Zone D Lobster Council representative for District 11 Lobstermen and a lobsterman, holding a Maine commercial lobster and crab fishing license. Mr. Canning fishes out of Belfast, Maine in the area proposed by NAF for placement of its intake and discharge pipelines and the area where wastewater will be discharged.
8. Mr. Canning has participated in local and State proceedings and meetings in connection with this permitting process and has submitted and given testimony in opposition to the NAF project as proposed.
9. Mr. Canning has solicited input regarding the potential impacts of this proposed project from the Zone D District 11 lobstermen who he represents.
10. Zone D District 11 includes the geographic area where NAF proposes to place its intake and discharge pipelines and discharge up to 7.7 million gallons per day of warm wastewater. The construction and placement of these pipelines and discharge of wastewater into Penobscot Bay will adversely impact Wayne Canning and all District 11 lobstermen.
11. Attached as Exhibit A is Wayne Canning's personal statement detailing the adverse impacts that this project would inflict on the 82 to 100 licensed lobstermen in District 11. A list of license holders from District 11 obtained by Mr. Canning from DMR is attached to his Statement. Mr. Canning also has included the May 4, 2013 letter sent to the U.S. Army Corps of Engineers by the Downeast Lobstermen's Association, opposing the proposed Searsport dredge project. DELA's letter confirms the uncompensated, multi-year adverse impacts suffered by the lobstermen in District 11, including Mr. Canning, due to past

dredging projects, including the 2003 Belfast Harbor dredging project. Mr. Canning's statement and the DELA letter are incorporated in this petition as though stated herein.

**DAVID BLACK:**

12. David Black is a Belfast resident and a lobsterman, holding a Maine commercial lobster and crab fishing license. Mr. Black has fished for more than 55 years in Belfast Bay and Penobscot Bay out of Belfast, Maine, and fishes in the area proposed by NAF for placement of its intake and discharge pipelines and the area where wastewater will be discharged.
13. Mr. Black has participated in local and State proceedings and meetings in connection with this permitting process and has submitted and given testimony in opposition to the NAF project as proposed.
14. Attached as Exhibit B is Mr. Black's Statement detailing some of his personal knowledge of the lobster fishery in the upper Penobscot Bay and Belfast Bay – an area where he has made a living fishing for decades. Mr. Black confirms the uncompensated, multi-year adverse impacts suffered by the lobstermen in District 11, including him, due to past dredging projects (including the 2003 Belfast Harbor dredging project) and past placement of pipelines that obstruct the movement of lobsters in and around the Bay. Mr. Black's statement is incorporated in this petition as though stated herein.

**Particularized Adverse Impacts from this Proposed Project that These Petitioners for Intervenor Party Designation Will Suffer:**

15. The impacts that Petitioners will suffer from this project as proposed include direct impacts on the abundance, distribution, health, access to and commercial value of lobsters in and from Belfast Bay and Penobscot Bay, as well as the potential adverse economic impacts from possible contamination of lobsters caused by disturbing long-buried HoltraChem mercury or discharge of contaminants in the NAF wastewater, which could irreparably damage the reputation for wholesomeness of *all lobsters* marketed and sold under the Maine Lobster brand – including but not limited to lobsters that are caught or landed specifically in or from Waldo County in Belfast and Penobscot Bays.
16. Among those impacts is the deposition of process waste into Penobscot Bay, polluting the Bay and impairing the farming of mussels and harvesting of lobsters, and fouling beaches where members and their families swim and fish;
17. In addition, these impacts include permanent physical loss of use and access to traditional fishing grounds by lobstermen, crabbers, urchin fishermen and scallopers in the area of the proposed pipelines and wastewater and effluent dumping, and potential loss of use of a far more expansive area of the upper Penobscot Bay if the proposed pipeline and wastewater and effluent dumping cause new contamination and/or the re-suspension and spread of long-dormant and buried mercury contamination from Mallinckrodt and HoltraChem.
18. IMLU members and other licensed lobstermen and crabbers have already lost the use of approximately 13 square miles of lobstering and crabbing grounds near this area due to the presence of mercury contamination. This project poses a threat of disturbing similar contamination from the same original sources (Mallinckrodt and HoltraChem), as well as new and as yet not fully revealed additional contamination that will damage the

marketability and/or abundance of lobster and crab, as well as other commercially fished species in this area.

19. NAF's third proposed pipelines route and configuration proposes that a large portion of the intake pipelines and most of the outfall/discharge pipeline would be buried in the intertidal zone originating in and near the Little River and extending into Belfast and Penobscot Bay. NAF proposes that these pipelines will be buried by use of destructive mechanical trenching in this fragile and sensitive intertidal estuary.
20. NAF also proposes to use blasting to destroy ledge in this area so that it can bury these pipelines – again disturbing and spreading buried HoltraChem mercury that the federal court's experts have determined is buried in this area.
21. NAF then proposes to place the remaining length of the outfall and intake pipelines along the surface of the Bay beginning at a depth of approximately 32-feet, covered by gravel and a concrete covering. This construction process would form an underwater seawall that is approximately 5.5 feet high and 8 to 10 feet wide. This wall will inevitably alter currents in the area, trap wastewater, disrupt and obstruct the movement of lobsters and other sealife, and damage or destroy valuable lobstering grounds where 100 to 200 lobstermen currently fish from Districts 10 and 11.
22. The up to 7.7 million gallons of wastewater that NAF proposes to dump daily into the fertile lobstering grounds of Penobscot Bay will be 5° to 33° Fahrenheit warmer than the natural temperatures of Penobscot Bay – depending on the time of year of the discharge. Dumping wastewater that is significantly warmer than the ambient temperatures of the Bay will adversely impact lobsters at all stages of development and permanently harm the Penobscot Bay lobster fishery. To underestimate such adverse impacts, NAF has filed “expert” reports falsely claiming that there is no significant lobster presence in this area – new to the almost 200 lobstermen who make a living fishing this area each year.
23. Attached as Exhibit C are county-by-county lobster landings data from the Maine Department of Marine Resources dating from 1964 to 2018. This data flatly contradicts the specious claims made by NAF and its agents that there are few lobsters in the area where NAF proposes to place its pipelines and that NAF acknowledges will be directly impacted by its wastewater discharges. This data is incorporated by reference into this petition as though stated herein. This data can be found online at:  
<https://www.maine.gov/dmr/commercial-fishing/landings/documents/lobster.county.pdf>
24. Exhibit C confirms Mr. Black’s statement, demonstrating the exponential increase in lobsters and lobster landings in Waldo County as the Bay has begun to recover from past industrial degradation and pollution of this area of the Bay. From 1964 to 1999, the Waldo County lobster catch was not significant enough for DMR to even be separately mention in its report. From 2000 to 2003, Waldo County’s catch was included with the Knox County data. However, beginning in 2004, the Waldo County catch had rebounded enough to be separately reported by DMR.
25. In 2004, the Waldo County catch was 401,706 pounds, worth \$1,762,878 at the dock.
26. However, the catch drastically declined as a result of the effects of the 2003 Belfast Harbor dredge on the upper Bay fishery. In 2005, the catch declined by over 29% to 284,661

- pounds. The catch remained under the 400,000-pound range until 2011.
27. In 2011, the catch was 456,016 pounds with a value of \$1,449,663. Since 2014, the Waldo County Catch ranged between 746,704 pounds and 864,528 pounds, with a value in excess of \$3 million each year.
  28. The value of the Waldo County lobster catch has a value in the local and Maine economy of three to five times the value of the catch at the dock – meaning the Waldo County lobster catch has an economic worth to the Maine and Midcoast economies of in excess of \$9 million and \$15 million annually.
  29. The value of this catch far exceeds the potential annual economic benefits to the Maine and local economy of the proposed NAF project. This significant economic value would be lost if this project is approved.
  30. Attached as Exhibit D is a detailed list of adverse impacts of the NAF project, as proposed, that will have direct, immediate, significant adverse impacts on lobsters' health and quantities, access to traditional lobster fishing grounds currently used by 100 to 200 lobstermen, the reputation and sustainability of the lobster fishery in the upper Penobscot Bay, and the reputation for wholesomeness of Penobscot Bay lobster and the Maine lobster brand.
  31. Attached as Exhibit E is a mercury distribution chart prepared by the federal court's experts during Phase II of the PRMS. This chart is incorporated herein as though stated in this petition. This chart shows that the level of contamination from buried HoltraChem mercury in the area NAF proposes to dredge, blast and place its pipelines is 200-300 ng/gm. NAF has confirmed a level of 239 ng/gm in one of the 3 core samples they took last year. NAF's employee Ed Cotter has told the Belfast Harbor Committee that NAF did not test 7 of the 10 core samples NAF took, 2 samples were "inconclusive" for mercury, and one of the 3 tested cores showed 239 ng/gm (just as the Court's experts stated was present. It is significant that NAF found this level of mercury, since NAF confirmed that it did use the more accurate PRMS core sampling and testing protocol to do its testing.
  32. The IMLU, Wayne Canning and David Black are willing and able and prepared to participate in the Board's Hearings as Full Parties, have retained an attorney and have experts who have been studying this area of Penobscot Bay and/or the Project and are prepared to present expert testimony relevant to NAF's applications and proposed project.
  33. Consideration of the forgoing is required by:
    - a. The Clean Water Act, 33 U.S.C. 1251 et seq. and State companion statutes and regulations;
    - b. Maine State Regulations Chapter 38, Section 413, Waste Discharge Licenses;
    - c. Maine State Regulations Chapter 7 Part 10, Concentrated Animal Feed Operations;
    - d. Maine Statutes Title 38, Chapter 3, Site Location of Development;
    - e. Maine Statutes Title 38, Chapter 3, Wetlands;
    - f. Maine Statutes Title 38, Chapter 3 Natural Resources Protection Act; and
    - g. Maine Statutes Title 38, Chapter 3, Water Withdrawal.

WHEREFORE, the IMLU and its members, Wayne Canning and David Black will be "substantially and directly affected by the proceeding."

FOR THE ABOVE REASONS, the IMLU, Wayne Canning and David Black request that this Petition for Intervention be GRANTED.

Dated this 10<sup>th</sup> day of July, 2019.

Respectfully Submitted,

Kim Ervin Tucker, Esq., Maine Bar No. 6969  
On Behalf Of the Maine Lobstering Union;  
Wayne Canning, Zone D Lobster Council  
Representative for District 11 Lobstermen; and

## **STATEMENT OF WAYNE CANNING**

My name is Wayne Canning and I am the District 11 representative for the State of Maine Zone D Lobster Management Policy Council. I represent 100 lobster fishermen in this area. (Attached is list of names and commercial lobster license numbers of all fishermen that I represent in Zone D, District 11). The purpose of this statement is to provide concerns and facts to the Maine Board of Environmental Protection regarding the licensing request for intake and discharge pipes proposed by Nordic Aquafarms for their RAS project located in Belfast and Northport.

While every fisherman in Zone D and in Penobscot Bay would be adversely impacted by this project, those individuals in my District, District 11, would be impacted the most. As I discuss this project with fishermen regularly, it is very clear that a majority of the fishermen working in the area of this proposed pipe are very concerned and opposed to this project.

Local fishermen have the best knowledge of the conditions in the bay, and have seen the impacts of other similar projects which have caused great harm to the environment in Upper Penobscot Bay. Examples follow:

- Periodic dredging at Mack point in Searsport causes lobster production to decline in areas close to the projects.
- The dredging of Belfast Harbor in 2003 caused a sharp decline in lobster production that lasted for a decade. (See attached letter from DELA).
- The placement of a sewer pipeline across Belfast Harbor in the year 2000 stopped lobster migration into the inner harbor and up the river. This area had previously been very productive lobster fishing, and has never returned to its earlier production.

The Nordic Aquafarms pipeline as proposed will affect lobster fishing in Upper Penobscot Bay in the following ways:

- Dredging and blasting for construction of this pipeline will cause lobsters to avoid the area the same as it does in any other dredging project.
- Buried mercury is a known contaminant in the bottom sediment in this area. This mercury contaminated sediment, found to be in this location during the federal court's Penobscot River Mercury Study, will obviously be disturbed not only by dredging and blasting, but by the continuous operation of this pipeline.
- The Penobscot River is now closed to all lobster and crab fishing as far South as Stockton Harbor due to methyl mercury contamination found in samples of the lobsters and crabs taken from that area. This contamination was caused by buried mercury in the river being dislodged solely by river currents. When that area was closed, several fishermen including myself were displaced and can no longer fish there. **WE DO NOT WANT THE SAME THING TO HAPPEN IN BELFAST BAY BECAUSE OF THE NORDIC AQUAFARMS PIPELINE, IT'S CONSTRUCTION AND IT'S OPERATION.**
- As any fisherman can tell you, lobsters are very sensitive to even slight changes in the environment. This project proposes to dump enormous amounts of brackish and warm water (15°-18° Celcius; 59°-64.4° Fahrenheit) into a small area of Belfast Bay. This alone will cause lobsters and crabs to move away and not return to the area. Many fishermen will be displaced by the impacts of this project. Due to the very territorial nature of the lobstering society, it is almost impossible to relocate your fishing business to someone else's area. Many conflicts would arise.
- Interestingly, this pipeline is located just over 1 mile from the proposed dump site for the Searsport Harbor Improvement Dredge Project that resulted in huge controversy and was finally canceled because it would have caused so much destruction to the environment. **THE NORDIC AQUAFARMS PROJECT SHOULD NOT BE APPROVED FOR VERY SIMILAR REASONS.**

Lobster landings in this area have doubled in the last decade when there has been no disruption of the bottom sediments. (see State landings data for Waldo County). Nordic Aquafarms' claims that this area has few lobsters is simply false. While landings in this area are lower than other areas of the state, it is a

very important industry for Waldo County. Remember that this is a very small area, and up to 100 fishermen make a living here year in and year out. The lobster landings by these 100 fishermen are worth 3 to 5 times the amount of those landings to the local Midcoast economy according to the Maine Lobster Institute. This is a significant economic contribution to the Maine economy that will be lost if this project is allowed to proceed.

Additionally, there are several local fishermen who fish for crabs in the winter months that would be adversely impacted by this project – as would the other local businesses that then sell the catch these lobstermen bring in.

Underwater pipelines have been the root and cause of many environmental disasters over time, and this project will be no different. The few jobs that may be created by this pipeline on the mainland will be more than offset by the displaced fishermen and lost jobs of the fishermen in my District. The ripple effect in the restaurant and tourism industries will also be significant.

As the fishermen's representative in this area, I ask that you do not approve any permits for the Nordic Aquafarms pipeline proposal.

Sincerely,  
Wayne Canning  
Zone D District 11 representative

A handwritten signature in black ink that reads "Wayne Canning". The signature is fluid and cursive, with "Wayne" on the first line and "Canning" on the second line, which is slightly lower and overlaps the end of "Wayne".

Re: Searsport Harbor Dredging Project

Dear Ms. Blumeris,

Our first and most important reason for writing this letter is to request a full Environmental Impact Statement to be conducted on the Searsport Harbor Dredging project as well as a public hearing.

We feel that the impact of this dredging project could have an adverse effect on the upper Penobscot Bay. We understand that the maintenance part of this project is a small percentage of the entire project that is being proposed.

The big concern that needs to be addressed comes into the *expansion* of the project. The amount of bottom that will be removed and re-located "down toward the "I - I" Buoy", which is not classified as a "Dumpsite," will have a devastating impact on the lobster fishery in this area.

The maintenance of the existing channel should not be incorporated into an expansion project which has no relevance due to the fact that the LPG tankers will not be using the Searsport Facility.

Our members have been and continue to be involved in environmental studies concerning pollution issues and the impact of it on our marine resources. The balance of our marine eco-system is starting to make a come-back after the devastation of the dredging of Belfast Harbor from the last decade. This recovery has taken "years."

We strongly urge that the scientific and environmental data/impact of this project should be shared with the public, so those that will be directly affected by this will have an opportunity to voice their concerns.

Respectfully Submitted,

*Sheila H. Dassault*

**Statement of David Black**

**July 10, 2019**

**My name is David Black, a resident of Belfast Maine, and a lobster fisherman working from Belfast Harbor for 55 years.**

**Please include the information in this statement as part of the discussion on applications before you regarding the Nordic Aquafarms proposal to construct multiple pipelines into Upper Penobscot Bay in Belfast and Northport for the purpose of providing the intake of seawater and the discharge of effluents from the RAS facility proposed by Nordic Aquafarms to be located in Belfast, Maine.**

**As a local fisherman, I derive a significant portion of my annual income from the area beneath and adjacent to the proposed location of the Nordic Aquafarms pipeline. Therefore, I have considerable local knowledge of the area that I would like to share with you. I am sure that upon a total review of local information regarding this project that you will have many concerns about the environmental dangers and consequences of this proposed pipeline, just as I do.**

**Belfast Bay has a long productive history of fishing which has been diminished over time due to many municipal and industrial pollution sources. These pollution sources include decades of raw municipal sewage disposal from many points around the bay, untreated chicken waste from area poultry plants, fish waste from a long operating fish canning factory as well as mercury contamination in the bay from a facility on the Penobscot River. Add to these several dredging projects in Belfast, Searsport and other ports and you begin to see the degree of pollution this bay has suffered in the past.**

**I will discuss these pollution concerns separately:**

**MUNICIPAL SEWAGE**

**When I was young, raw sewage was a common sight in the bay. In recent decades, the municipal sewage outfalls around the Bay have mostly been identified and corrected. The result has been lower fecal coliform levels and increased availability of clean shellfish resources.**

**INDUSTRIAL WASTE**

**During the 20th century there were 2 poultry processing plants and 1 fish canning factory in Belfast that dumped untreated chicken waste and some fish waste through large pipelines directly into Belfast Harbor. The Harbor was so fouled with this effluent that Belfast Harbor was listed in the U.S.Cost Pilot publication as a harbor to avoid when cruising the Coast of Maine. After the closures of these factories, and the elimination of these discharge pipes, the bay became cleaner and more appealing to the public. However, I can tell you that today the remnants of those discharges remain in the sediment on the bottom of the bay. I believe it will take many a lifetime for this area to completely clean itself.**

**DREDGING**

**In my experience, whenever there was a dredging project at Mack Point in Searsport Harbor, the lobster catch in the area slowed for several years until the environment recovered. Additionally, when Belfast Harbor was dredged in 2003, it took a decade for the environment to**

recover according to a letter from the Downeast Lobstermen's Association to the U.S. Army Corps of Engineers dated May 4, 2013.

Please note that the most recent attempt to dredge Searsport Harbor was cancelled due to environmental concerns.

## MERCURY

Mercury contamination in the bay from unconfined industrial mercury pools in the Penobscot River being moved downriver by the current has resulted in 13 square miles at the mouth of the Penobscot River being closed to all lobster and crab fishing due to methyl mercury contamination in these shellfish. Further studies by the federal court have identified buried mercury in other areas of the bay and specifically in the area of the proposed Nordic Aquafarms pipeline.

Can we now feel comfortable with a new pipeline proposal by Nordic Aquafarms to be constructed in Belfast Bay based upon this history? Each of the aforementioned sources of pollution were the result of projects permitted by the State of Maine and the Federal government over long periods of time.

I can think of several reasons to be very cautious with this project and they are as follows:

- This proposed pipeline is to be located just over a mile from the very controversial and failed proposal to dredge and dispose of sediments from the Searsport Harbor Improvement project in Upper Penobscot Bay.
- Dredging and blasting resulting from this project will produce the same impact as other dredging projects in the area.
- The construction and operation of this pipeline is directly in an area identified as containing buried mercury that would be continuously impacted releasing mercury to be ingested by sea life resulting in further closures of lobster and crab-fishing areas where I make my living.
- This project proposes discharging 7.7 million gallons of brackish warm water into the bay every day! I was told by the project manager for this RAS facility that this volume of water equals nearly 50 percent of the total water volume of this RAS facility being discharged daily. An existing RAS system in Maine is run by the University of Maine and the operator of that facility has stated that they discharge only 10 percent of the total water volume daily, a significant difference. This is water that would be heated between 5 and 30 degrees Fahrenheit above the ambient temperature of seawater from the bay ( depending on the time of year ) combined with ground water from wells. It is very unreasonable to assume that this water which has been described by the applicant as cleaner than the water being pumped into the facility from the bay, should be discarded so soon after mixing and heating. This does not sound like a RAS facility at all but rather a flow thru system. This warm and brackish water will cause lobsters to leave the area for more saline and temperate conditions. This concern alone will cause great economic hardship for myself and other local fishermen.

- The chief technical officer for Nordic Aquafarms explained to me one day in his office that all discharge water from this facility will be run through a .4 micron filter before reentering the bay. Again, at the RAS system run by the University of Maine the minimum water filter is 30 microns, almost 80 times larger than the filters being proposed by Nordic. The manager of that facility stated that filters finer than 30 microns would clog quickly and be of no value.

- Nordic Aquafarms has submitted technical data with this application stating that lobsters are absent from this area of the bay. According to DMR statistics, total annual landings of lobsters for Waldo County have nearly doubled in the past decade. The area impacted by this pipeline is essentially the same area of Waldo County that exists in the bay.

As a fisherman working in this bay for 55 years, I have become a mentor for some of the younger fishermen that are hoping to have opportunities to live and prosper on this bay just as I have enjoyed for much of my life. The old timers always told me that it was my responsibility to leave this bay in better condition than when I found it, for the benefit of the next generations, and that is exactly why I am speaking to you today.

Please exercise your responsibilities as representatives of the people of Maine and understand that a better solution for the treatment of waste water from RAS aquaculture must be found other than this out of sight and out of mind pipeline.

Your vote in opposition to this project is in order.

Respectfully submitted

David Black

\*The 2002 & 2003 landings may possibly reflect the increased effort by DMR to collect voluntary landings from some lobster dealers; caution is advised when comparing these numbers to previous years.

\*\*Lobster reporting became mandatory in 2004 for all Maine dealers buying directly from harvesters, so caution is advised when comparing these landings to previous years.

All 2018 data are preliminary

## I. SUMMARY OF OTHER GROUNDS FOR DENYING THIS LEASE APPLICATION

The placement of these pipelines in Penobscot Bay, as proposed by NAF, would have potentially devastating impacts on the environment and economy of the Midcoast region – especially on our commercial fisheries and fishermen, including the iconic Maine lobster fishery in Penobscot Bay – which is the foundation of our economy in this region and the source of thousands of existing well-paying jobs. These adverse impacts include, but are not limited to the following:

- **Disturbing Buried HoltraChem Mercury:** The dredging and blasting required to bury a portion of NAF's pipelines in the Bay would disturb long-buried mercury from HoltraChem's discharges almost fifty (50) years ago. HoltraChem legacy mercury has previously been determined to be buried in this area of the Bay by the federal court's experts who conducted the Penobscot River Mercury Study ("PRMS").<sup>1</sup> In 2014, the Maine Department of Marine Resources ("DMR") shut down approximately 7 square miles in the lower Penobscot River and upper estuary of Penobscot Bay to all lobstering and crabbing due to the high level of mercury lobsters in this area had in their meat. That closure was based on data collected by the federal court's experts in the Penobscot River Mercury Study (PRMS). In 2016, DMR shut down an additional 5.5 square mile area in the upper Penobscot Bay to all lobstering and crabbing, after finding a mean level of mercury in the tail meat of 40 adult lobsters of 292.7 ng/g, caused by exposure to HoltraChem mercury in the surface sediments south of Verona Island resulting in methyl mercury contamination. 13-188 C.M.R. ch. 25, §25.65. The DMR concluded that any mean levels of mercury in lobster meat, over 200 ng/g, justified its closure of both the lobster and crab fishery (even in the absence of such levels in the crabs in that area). The mercury levels the court's experts determined are found buried beneath the surface sediment in the area NAF proposes to dredge is 200 – 300 ng/g.<sup>1</sup> At the April 24, 2019 Belfast Harbor Committee Meeting, NAF's representative (Ed Cotter) revealed that NAF-commissioned sediment tests (which have not been made public), confirmed a level of 239 ng/g in one core sample that they took in this area and that NAF had failed to test most of the 10 core samples they had taken. During the December 17, 2018 NAF public information meeting, NAF's representative confirmed that the sediment testing method NAF's agents used to do their tests was not the more accurate PRMS sediment testing standard. Indicating that the level of mercury that is buried in this area may be even higher than previously determined, since NAF found 239 ng/g there even using a less accurate sediment testing protocol that was likely to underestimate the

---

<sup>1</sup> The relevant DMR rule states:

**25.65 Lobster and Crab Closure in Penobscot River**

It is unlawful to fish for or take lobsters or crabs by any means from the waters north of a line starting at the western most point of Perkins Point in the Town of Castine continuing in a northwesterly direction to the southern most point of Squaw Point on Cape Jellison in the Town of Stockton Springs. This section does not apply to equipment operated by the Department of Marine Resources.

true level of mercury and its depth under the surface. Re-suspension of the HoltraChem mercury in the area of Penobscot Bay where NAF proposes to dredge and blast could spread methyl-mercury contamination throughout the entire food web of the Bay – destroying the lobster fishery that provides hundreds of lobstermen the ability to make a good living in now, damaging the reputation for wholesomeness of the Maine Lobster brand, harming all people and businesses that depend on the Midcoast lobster catch, and endangering the health and safety of all Midcoast residents and wildlife that live in and around Penobscot Bay.

- **A 5.5-Foot Underwater Wall:** According to NAF's latest schematic drawings for installation of their pipes in the intertidal land and under the Bay's waters, the portion of the pipelines that are not buried will form a wall on the surface of the Bay's bottom off Northport. The three pipes would be covered by gravel and a mesh cover. This configuration would form a wall along the bottom that is roughly 5.5 feet tall and roughly a half-mile long. Lobstermen who fish this area and who have had experience with disruptions to lobster movements caused by prior pipeline placements in Belfast Harbor, advised the Belfast Harbor Committee on April 24, 2019 that NAF's proposed underwater seawall will significantly disrupt the migration of lobsters in and around Penobscot Bay and radically change currents in this area and throughout at least the upper Bay. The effect on shorelines, erosion or navigation is unknown but likely also significant.
- **Contents and Characteristics of the Wastewater:** The impacts of the 7.7 million gallons of wastewater a day that NAF proposes to discharge into Penobscot Bay from these pipelines can also not be ignored when evaluating the impacts on riparian owners' rights and on commercial fishing and fisheries' health.<sup>2</sup> According to the current, new Commissioner of DEP during his January 30, 2019 confirmation hearing, the impacts of this discharge on commercial fisheries is a subject in the jurisdiction of DACF-BPL not a consideration of the DEP during the MEPDES process. However, no information on the nature and predicted impacts of this wastewater discharge has been submitted by NAF, to date, to either agency.
  - **Wastewater Temperature:** The proposed warm temperature of this wastewater (59° to 64.4° Fahrenheit; revealed as 15° - 18° Celcius in the MEPDES permit application) – discharged year round -- is between 5° and 33° Fahrenheit warmer than the Bay's normal temperatures (depending on what time of year it is discharged). If a rise in temperature of the Gulf of Maine or the Bay of 0.5° Fahrenheit can devastate our ecosystems – what could the impact of discharging this volume of wastewater daily, in a relatively shallow embayment and estuary be?! In light of the loss of the lobster fishery in southern portions of New England, attributed to warming waters in those areas, the adverse impacts on the lobster fishery in Penobscot

---

<sup>2</sup> To put this in perspective, the entire community of Bayside's wastewater treatment facility is limited to discharging 7 million gallons a year of treated wastewater into the Bay

Bay would be catastrophic in the upper and western Bay, and potentially wide-ranging throughout the Bay as the water circulates.

- **Nitrogen:** The discharge will contain, according to NAF, 1484 pounds (673 kg) a day of nitrogen, which poses the risk of dangerous algae blooms, fish die-offs, and could put the Bayside Mussel Farm – an existing aquaculture leaseholder in the area of the discharges – out of business.
- **Currents and Circulation:** It will take fourteen days after discharge to leave the immediate area of the outfall pipe to circulate to every corner of Penobscot Bay and then out into the Gulf of Maine. This circulation estimate by NAF's consultant means that in the immediate area of the outfall there will be a constant accumulation of approximately 108 million gallons of wastewater – destroying the viability of the existing mussel farm aquaculture business that thrives in the currently clean waters in this area and harm the use of these waters by all existing riparian owners in this corner of the upper Bay. This NAF current estimate was made without consideration of the impact of prevailing winds and we believe was done prior to the adoption of the re-configuration of the pipelines to an above-ground placement.
- **Salinity Changes:** According to NAF, 15% of the wastewater will be fresh water – permanently changing the salinity of the Bay through man-made alterations.

No one can predict the scope of the adverse impacts that will result from allowing NAF to convert Penobscot Bay into its own giant chemistry experiment, but the impact on the health and reputation of all of Penobscot Bay's fisheries – especially our currently thriving and lucrative lobster fishery – will be significant, long-term and likely devastating. The adverse impacts on the thousands of lobstersmen who fish in Penobscot Bay are incalculable, but certainly not off-set by the illusory promise by NAF of "up to" 100 jobs of unspecified salary ranges.

Mr. Bernacki accurately lays out the revelation last night from Cianbro, Ransom and other NAF agents that NAF revealed at the so-called “public hearing” on March 2, 2020.

To expand on the import to pending proceedings of what Mr. Bernacki is reporting is that, yet again, NAF has withheld material information from regulatory entities and Interested Parties that will have significant adverse impacts on Penobscot Bay and the fisheries and fishermen that rely on the health of this fragile estuary.

I am attaching a copy of the “haul route” for dredge spoils that NAF and DMR revealed for the first time last night.

During questioning last night of NAF’s agents, NAF revealed that it has known about the need for, and route proposed for, this haul route for at least two weeks. When I asked if they knew this on February 14th, DMR Deputy Commissioner Mendelson tried to thwart my query — after a day in preparation with NAF’s representatives (not fishermen) for the “public hearing” — and Dep. Com. Mendelson told me this was “not relevant” to the purpose of the “hearing”. When I explained this was relevant to the adequacy of the notice sent out by DMR to Interested Parties and to what was provided to BEP she stated she would not allow that kind of question or “attitude” at the “hearing”.

However, after two years of NAF’s constant efforts to “hide the ball” and “move the goal posts” — and the NAF’s repeated use of the tactic of filing different proposals with different agencies, I believe all Interested Parties, Intervenors, fishermen, and their representatives are entitled to a little “attitude”. Due Process violations deserve the expression of a bit of “attitude” and righteous indignation, especially when those violations are done with the knowledge, acquiescence and/or complicity of public employees whose jobs are, by statute, to protect our natural resources from degradation and exploitation — not to aid and abet those who propose such degradation to pull the wool over the eyes of an unsuspecting public or to shove

through permit approvals on a project about which the applicant has, again, withheld material information.

So, I file the attached haul route and the testimony of Dr. Dianne Kopec, one of the experts on the team of experts who did the Phase II study and report to the federal court in the Mallinckrodt litigation in the Penobscot River Mercury Study (“PRMS”). I am filing and PROFFERING this information with BEP and BPL to be placed in the administrative record for both proceedings and request this information be: (i) considered by the BEP and BPL in their deliberations; (ii) be used as the basis for reopening the BEP proceeding and extending the comment period in the BPL proceedings; (iii) be submitted in the comments to the ACOE in response to the February 4 Notice; (iv) used by ACOE and consulting agencies to evaluate the species and habitats (including EFH and eel grass beds) that will actually be adversely impacted by this dredging proposal — including consideration of the spread of methyl mercury contamination by the proposed dewatering of now 20,000 cy of dredge spoils; (v) the description of this project and the amount of dredging and dredge spoils, as well as the size and location of the area proposed for disturbance of sediment (including sediment containing HoltraChem mercury) proposed by the applicant be modified by BEP-DEP, DMR, BPL and ACOE and revised public notices be posted and filed with all Interested Parties and the public in the expanded impact zone — which now includes an additional municipality (Searsport); and (vi) considered as an omission of material information by this applicant, pursuant to Submerged Lands Rule 1.7(B)(10).

I note Mr. Bernacki’s observation that: “the math just doesn’t add up” on the amount of dredge spoils this project will generate. Previously, the applicant stated that it would “only” be disposing of about 5,000 cy of dredge spoils material at an upland facility (the identity of which the applicant did not reveal). Last night, the applicant stated that it would be disposing at least 20,000 cy of material at an upland facility and made the dubious claim that “no dredging” would be done in the subtidal area where the pipes would be suspended from brackets along the sea floor.

Since we do not live in the Bahamas and don’t have a hard sandy bottom where NAF proposes to place the pipes, and since the DEP has already described the need to “grade and fill” in the subtidal area where the above-ground pipe structures would be placed, it strains credulity to suggest that significant disturbance of sediment is not being proposed by this applicant in the subtidal area (where there is buried HoltraChem mercury) — which likely includes dredging and the creation of dredge spoils (and certainly includes the re-suspension of methane-laden and mercury-contaminated sediments).

If this project “only” involved the dredging and removal of 37,000 cy of material from the pipes’ trench, and now will send 20,000 cy to a landfill, then NAF would only be

proposing to put 17,000 cy of material back in the trench after pipes' placement. This would be an inadequate amount of fill to restore the trench to its prior depth. Thus, NAF appears to be admitting that it is now removing an additional 15,000 cy of material (at least).

**In any case, as a result of the material change revealed during the 3-2-2020 "hearing", all descriptions of this project currently posted to the public in public comment notices are inaccurate and require modification and re-notice to the public, abutters and other interested parties (including municipalities).**

I also file a formal request that sediment testing, using the PRMS standard for mercury testing as detailed in Dr. Kopec's comment, be required by this applicant in not just the actual pipeline route proposed for dredging but along the entire haul route now revealed and the impact area delineated on the second page of the haul route pdf attached to this email. These sediment tests are mandated by the Clean Water Act and NRPA in light of the known presence of Hg in the sediment of this area and the prior findings of the federal court's experts, as this is the area that this applicant has admitted will be directly impacted by its dredging and dredge spoils disposal plan.

In support of this request I reference Chapter 5 of the PRMS, Figure 5-7 and the sediment chart for ES 15A (@ page 150 of the Chapter 5 pdf) — which is along the haul route now proposed by NAF and Cianbro. This shows levels of mercury even higher than the pipelines' route itself that will now be impacted by dragging 110-130 barges of dredge spoils to Mack Point. This project now threatened the lobster grounds in the entire upper Penobscot Bay, at a minimum.

<https://www.nrdc.org/sites/default/files/chapter5-penobscot-mercury-study-report-mallin-201304.pdf>

Pretending the HoltraChem mercury does not exist will not prevent an environmental and economic disaster in Penobscot Bay and the State of Maine, if and when NAF and Cianbro are allowed to disturb the buried mercury for the sake of up to 70 jobs of unspecified levels of compensation and a payment of mitigation compensation to ACOE of \$650,000 and the State of some lesser amount.

What is the health of Penobscot Bay and the iconic Maine lobster fishery really worth?! I daresay the People of the State of Maine would say they are priceless and I implore those entrusted with protecting these priceless resources to do your duty and address the requests above.

Respectfully submitted,

Kim Ervin Tucker

Dear Friends FYI , Good Morning ,  
I had a bizarre experience last night at the DMR "hearing " listening to the Maine DEP , NRPA agent for Nordic ,Elizabeth Ransom and Cianbro spokess person Lauren Walsh. They detailed a dredge spoils disposal plan and construction narrative "amendment " that was starkly in contrast to the plans and construction narratives contained in the USACOE, The Submerged Lands Lease Application {Amended /pending } and the NRPA application, Appendix c and project narrative for the alteration of coastal wetlands .  
{ I include Mr Wood in this email because I think that perhaps dewatering 20,000 cubic yards of dredge spoils with a certain elevated Hg content might be a MEPDES and WQC /CWA issue? }

Some , Highlights from Ms. Walsh and Ms. Ransom amended narrative before the DMR { it was taped "for the Record" } and their statements and answers to "clarifying questions" are as follows

instead of 5,000 to 10,000 cu. yds. of "excess " spoils being removed at the end of Grading and filling , EVERY DAY a barge will be transporting and dewatering at the Little River Bay and in route to Mack Point a total of 110 trips or so "estimated 20,000 cu yds. ".

Every day the trench will be backfilled with installed pipes { I calculate that the one barge trip a day ditch will only be 16.2 feet a day }

But then if the ditch is dug and backfilled at low tide it will be night in november by the time the barge travels not daylight as claimed , as well as many lost days due to unfavorable short days and unfavorable tide schedules .

The pipe segments will not be 100 to 1000 feet long as in existing narratives , only a daily length of 20 feet . { these pipes are land welded electro chemically . 100 or so flange connections under water would be impossible and cost prohibited .

The dewatering in little river cove and during the trip to Mack Point will release large quantities of water that has not been tested for contaminants { not even SAP /green Book , much less for real with PRMS protocol .} and tests not on project site or to depth of dredge .

Discharge of polutants ? MEPDES/ WQC?

The Barge spoils route was only a linear line from the middle of the subtidal area ,and the dredge area is almost a half of mile in length perpendicular to the route , so the actual "routes" would spread out over an entire 1.2 square miles of fishing grounds , changing on a daily basis . The "Plan" Presented By Cianbro surveyor/ GIS expert , Cory Verril is not accurate or representative of the dewatering or the fishing impacts area .

The numbers don't add up . the dredge proposal for the dimensions stated for the "trench " in all the construction narratives minus the amount of spoils removed would indicate that at least 10,000 cubic Yards of additional fill material would need to be added to bring the the trench to "original grade " of seafloor and intertidal ?

Mr Tischbein I must formally ask for an extension of the comment period for the Nordic Aquafarms USACOE application for dredging filling and structure ,as it is clear that the application has been drastically amended

Mr Cutco I believe the Material facts , Rule 1.7b , 10 , have changed again . applicant amendment and New Notice ? .

---

Mr Livesay and Mr Wood ,Your post BEP hearing Problem I guess I can't comment , record closed !.

Thanks for your attention to these troubling material facts , Paul Bernacki

PS I will be following this up with a memo to the Interveners and Interested Parties , and their Attorneys ,of the BEP proceedings , whom I think you will hear from soon in a more formal way .

## Comments

### DMR Public Hearing Regarding Fishing Industry Impacts of Proposed Project for Nordic Aquafarms Inc. in Belfast, Maine

Date: March 2, 2020

TO: Sarah Cotnoir  
Maine Department of Marine Resources  
21 State House Station  
Augusta, Maine 04333

FROM: Dianne Kopec, PhD  
479 Beechwood Ave.  
Old Town, ME 04468

I am writing to discuss background information on mercury contamination in Penobscot Bay relevant to the proposed Nordic Aquafarms, Inc. project in Belfast, Maine. Between 2007 and 2014 I was the Staff Biologist for the Penobscot River Mercury Study (PRMS), a court-ordered study that examined mercury contamination, from the former HoltraChem chlor-alkali plant in Orrington, Maine, in the lower Penobscot River and Penobscot Bay. In the 2013 PRMS Phase II report summarizing our findings I was the lead author on Chapters 14 and 16 documenting mercury contamination in the lobster, fish, shellfish, invertebrates, and birds of the aquatic and terrestrial food webs impacted by the HoltraChem discharges, and co-author of an additional 14 chapters. I also authored three peer-reviewed journal articles on our findings and co-authored an additional five journal articles.

Existing data on the concentration of mercury in the nearshore sediment south of Belfast should be considered when reviewing the planned dredging operations associated with construction of the intake and discharge pipes from the proposed Nordic Aquafarms plant in Belfast. Between 2006 and 2012 the Penobscot River Mercury Study (PRMS) examined mercury contamination in the lower Penobscot River and Penobscot Bay from the former HoltraChem chlor-alkali plant in Orrington, Maine. Sediment core samples were collected in 2009 from multiple sites in Penobscot Bay and the river (Yeager 2013). The sediment cores were analyzed for total mercury in 1 to 2 cm slices from the surface down to a depth of 40 cm, then in 5 cm slices to a depth of 90 cm, providing a thorough account of the mercury concentrations at the chosen sample sites.

Included in the 2009 sediment work were cores from three sites sampled approximately 2 km north of the proposed Nordic Aquafarms (NAF) pipeline dredging area. Those cores, listed below in Table 1, provide sediment mercury concentrations from the surface sediment down to

a depth of 90 cm for the nearshore area south of Belfast. Core 08A is close to shore, core 08C is approximately 1 km offshore and core 7A is roughly 4 km offshore.

*Table 1. Total mercury (Hg) concentrations in sediment sampled in the nearshore area south of Belfast in 2009.*

Core #	Surface Sediment Hg 0 – 3 cm; mean (ng/g dw)	Deep Peak sediment depth (cm)	Deep Peak Hg (ng/g dw)
ES 08A 09V	347	15-16	495
ES 08C 09V	299	15-16	370
ES 07A 09V	304	6-7	346

Several findings given in Table 1 are important to note. The surface sediment mercury concentrations from the three sites were over six times greater than background sediment mercury concentrations for estuaries along the central Maine coast, reported by Bodaly (2013) as 25 – 50 ng/g dw. Further, the peak sediment mercury concentrations were not at the surface, but rather at a depth of 6 to 15 cm.

Surface sediment concentrations are most relevant to mercury contamination of biota, unless the sediment is disturbed. Most sediment mercury is in the inorganic form which has limited accumulation in organisms. Mercury in surface sediment is exposed to methylating bacteria in an environment amenable to transforming the inorganic mercury into organic methyl mercury, which is highly bioavailable, and which biomagnifies in aquatic food webs. If the sediments are disturbed and mixed, then the inorganic mercury sitting in the deeper sediment can also be methylated and enter the food web. Mercury concentrations in surface sediment are directly related to mercury concentrations in benthic foraging marine organisms.

The Penobscot River Mercury Study also examined mercury in lobster, and other shellfish, fish, and bird species. Mercury concentrations in lobster sampled to the south of Belfast were two to four times lower than found in lobster from the DME lobster closure zone near the mouth of the Penobscot River. Lobster were sampled in 2008, 2009 and 2010 in the area of Kellys Cove, south of Belfast, as part of Phase II of the study. Lobster from the Kellys Cove area had the lowest mercury concentration in tail muscle found in any of the northern Penobscot Bay sample sites (average of 100 ng/g ww, adjusted for carapace length, Kopec and others 2019), though still double the mercury concentrations in tail muscle from lobster sampled in Frenchman Bay in 2017, outside of the aquatic influence of the HoltraChem discharges (median mercury concentration 39 ng/g ww; Amec Foster Wheeler 2017). The mercury concentrations in lobster tail sampled from the current DMR lobster closure zone averaged 200 to 400 ng/g ww (Kopec and others 2019), two to four times greater than found in lobster from Kellys Cove.

Similarly, surface sediment concentrations (0 – 3 cm) in the south Belfast area were, on average, half of the average surface sediment concentration found in the DMR lobster closure zone (11 sites, average total mercury concentration 679 ng/g dw, 0-3 cm). However, within the lobster closure zone, surface sediment concentrations ranged from 332 to 916 ng/g dw (Yeager

2013). This wide range in surface mercury concentrations reflects variation in sediment characteristics and deposition patterns, and current and circulation patterns within Penobscot Bay. Note that the lower end of the range of surface sediment mercury concentrations in the lobster closure zone is equivalent to the surface sediment concentrations reported for the sampled area given in Table 1, north of the proposed NAF pipeline dredging operation. No data are available on the actual sediment mercury concentrations along the proposed route of the NAF pipelines.

It is important to conduct thorough sediment core analyses of the specific area proposed for dredging to install the NAF intake and discharge pipelines. This work should follow the coring and analytical methods used in the Penobscot River Mercury Study in order to generate an accurate description of the sediment mercury concentrations at all relevant depths. Cores should be sectioned for mercury analysis in 1 cm slices to a depth of 20 cm, then in 2 cm slices to a depth of 40 cm, then in 5 cm slices to a depth of 90 cm. This method will ensure a full characterization of the distribution of mercury in the sediment underlying the proposed pipeline route and allow the regulatory agencies to make informed decisions on any risks to biota associated with the proposed dredging and how best to dispose of any dredge spoils.

There are many economic and environmental advantages to land-based aquafarms, but like all new operations the preparatory work must be thorough and site-specific to ensure that unintended harm to the broader environment does not occur. Please contact me if you have any questions.
