RE: Silver Maple Wind Energy Project

It is with great pleasure that SWEB Development USA, LLC is providing this permitting package to the Maine Department of Environmental Protection. We look forward to developing our 20-megawatt Silver Maple wind energy project adjacent to our existing Pisgah Mountain Wind Project. This second phase of the project will be named the Silver Maple Wind Project and will make use of existing roads and lands owned by SWEB Development USA, LLC and by Pisgah Mountain, LLC. We are confident that this project will be a great asset for the state, and we look forward to working with you to fully comply with all of the guidelines provided in the 38 M.R.S.A. §§ 481-490.

The following package is divided into two sections as outlined in the Site Location of Development permit guidelines. For ease of review, we have included narrative prompts from the application itself, with answers below. SWEB will be actively engaged in the DEP's review of these materials and look forward to developing a successful project.

Sincerely,

Michael Carey
Development Manager
SWEB Development USA, LLC
