

SECTION 15

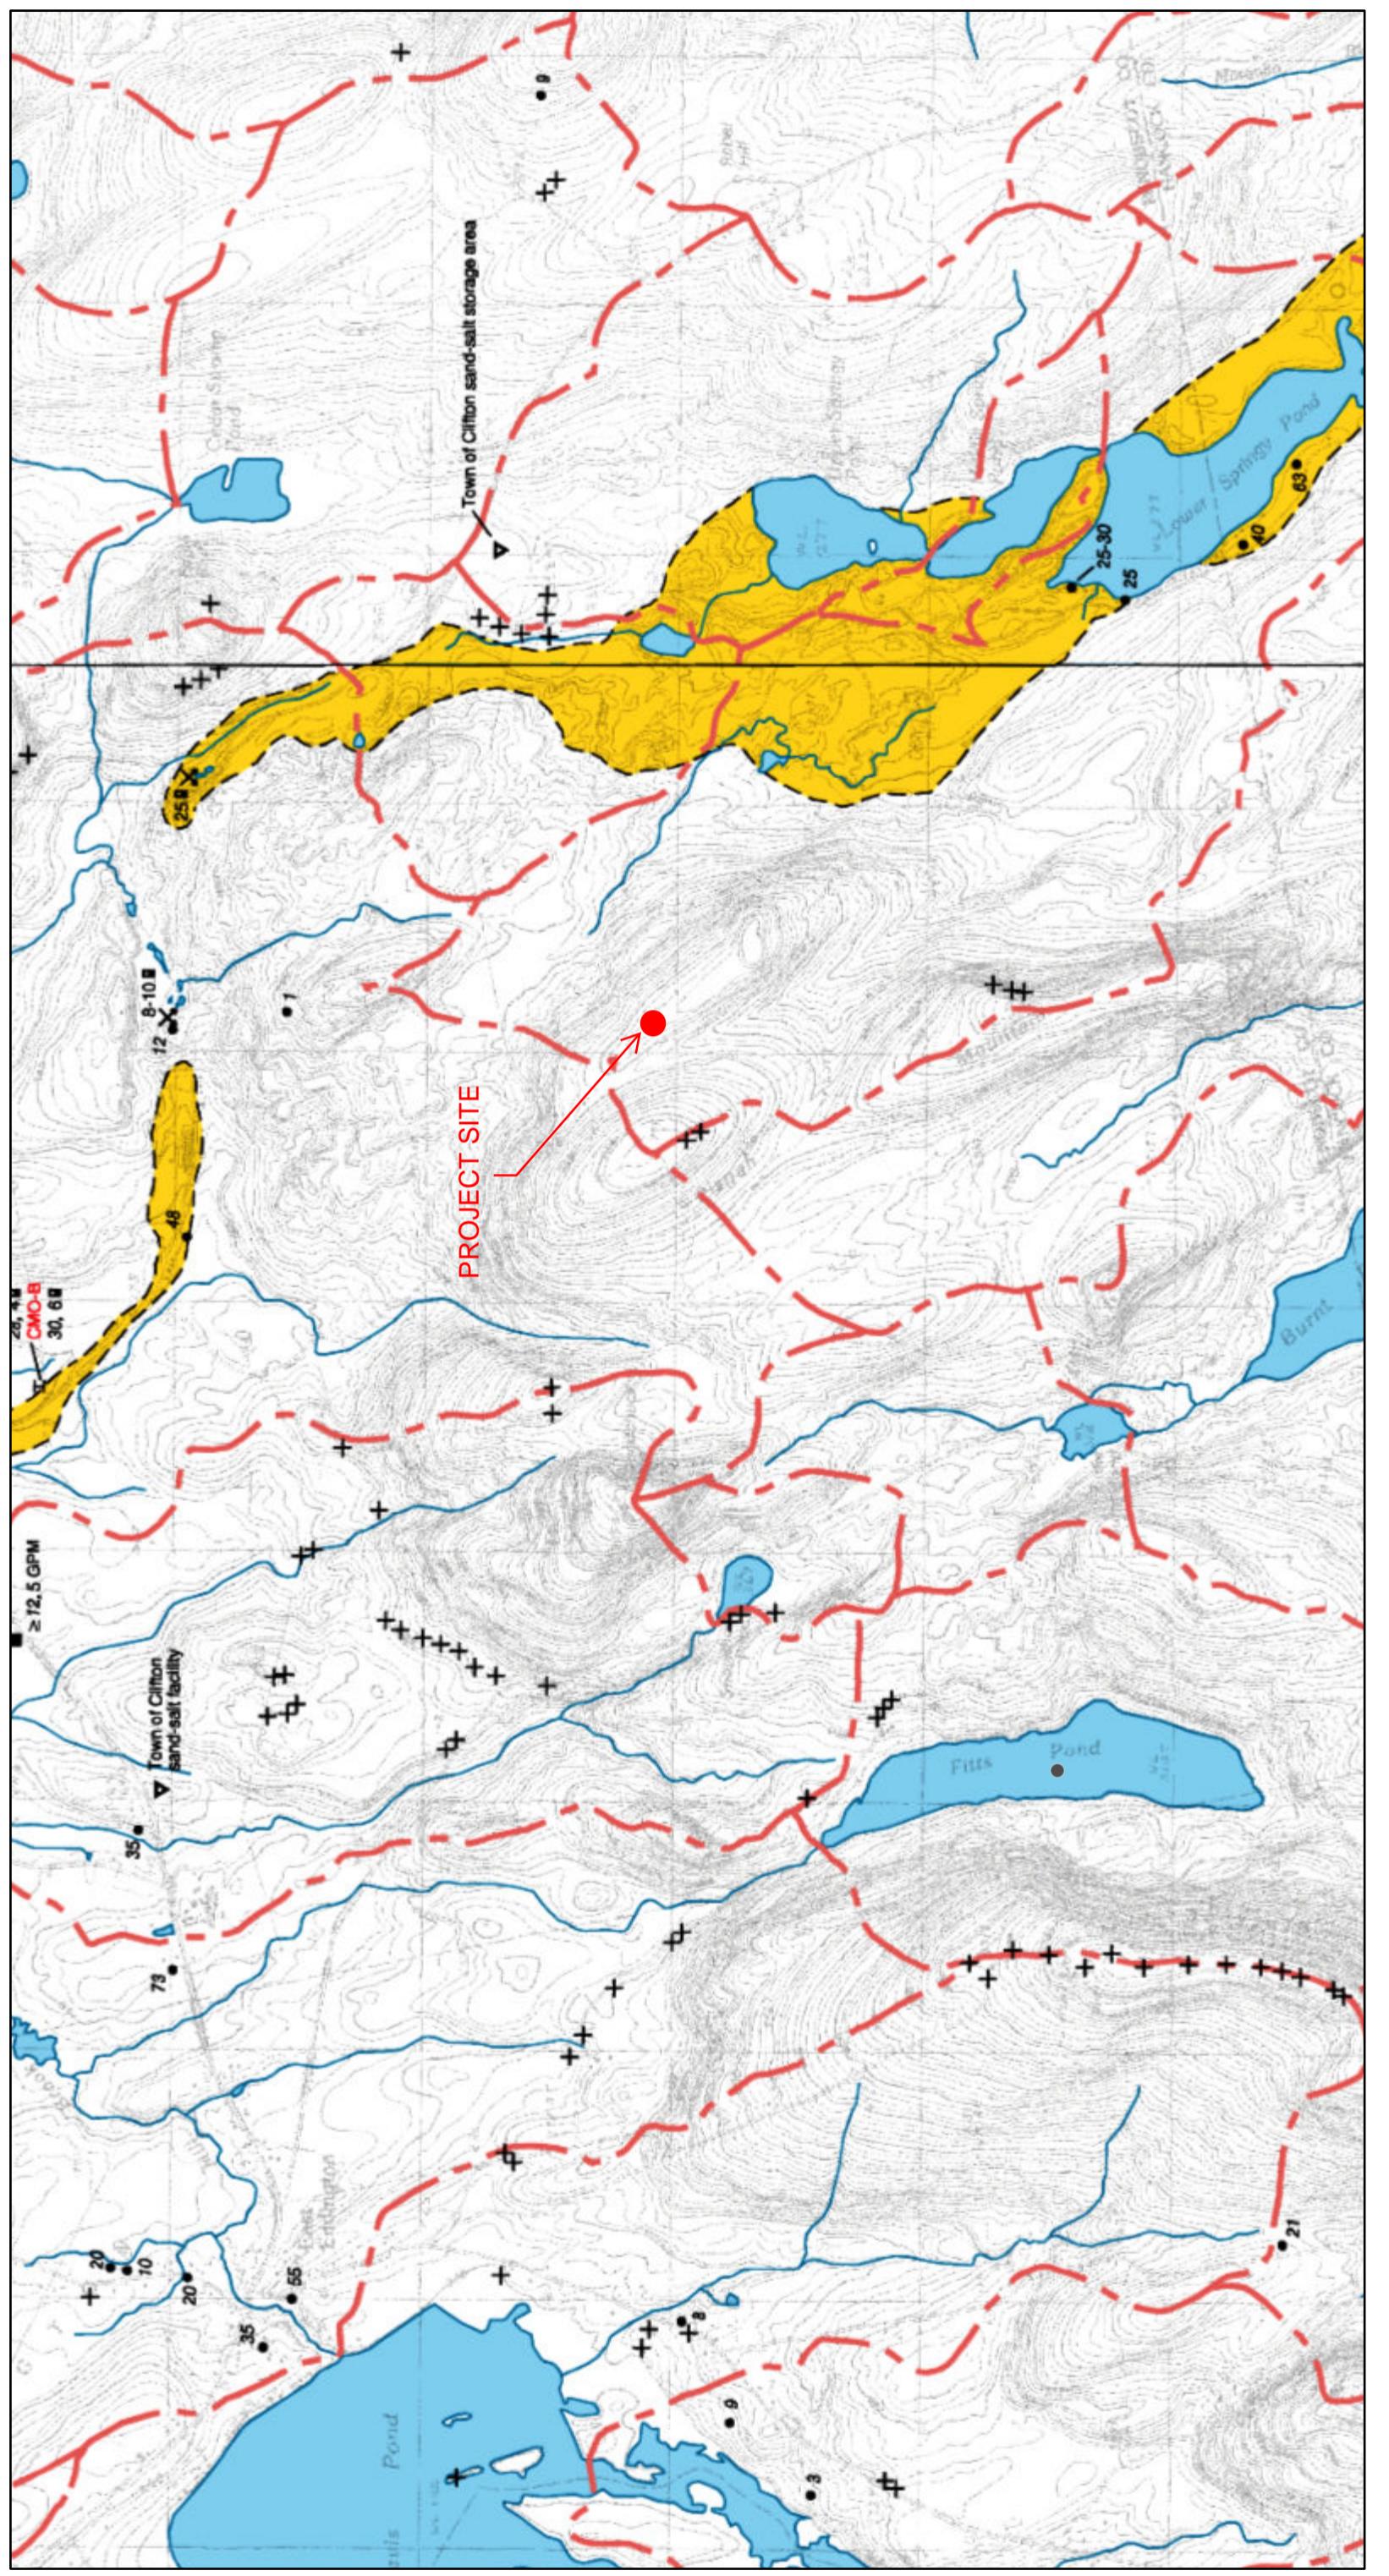

Groundwater

Section 15. Groundwater

A. Narrative.

The proposed project does not require establishing a water supply for operations either during or after construction. The proposed project will not include installations which will impact ground water in the area.

Significant Sand and Gravel Aquifer Map

10/11/2019, 2:24:49 PM

Approximate boundary of surficial deposits with significant saturated thickness where potential ground-water yield is moderate to excellent.

Surficial deposits with moderate to good potential ground-water yield; yields generally greater than 10 gallons per minute to a properly constructed well. Deposits consist primarily of glacial sand and gravel, but can include areas of sandy till and alluvium; yields may exceed 50 gallons per minute in deposits hydraulically connected with surface-water bodies, or in extensive deposits where subsurface data are available.

Surface-water drainage-basin boundary; surface-water divides generally correspond to ground-water divides. Horizontal direction of ground-water flow generally is away from divides and toward surface-water bodies.
