

**SECTION 16**

**Water Supply**

## Section 16. Water Supply

### A. Narrative.

The proposed project will not require a water supply for operations upon completion. During construction any water required for construction will be brought into the site by trucks. Any potable water needs during construction will be provided on an individual basis by bottled sources.

Water required for dust control will be pumped from ponded areas within the active gravel pit near the beginning of the site access road or from a natural flowage located at the base of Pisgah Mountain adjacent to the existing site access road.
