Are you all from out of The State of Maine?

When ever a vehicle looses charging power or electric power to their motor while on a road you need to recharge the battery.

The vehicle used to recharge your battery is not battery powered it has either a gas or diesel powered motor to run the recharging system .

How long will it take to recharge the battery if you need to have heat at the same time?

Why has Ford cut in half the amount of 1/2 ton electric trucks? I'll give you a clue!

We can't afford to buy s electric vehicle so they don't sell.

We can't start our vehicles now when the batteries are really cold. Now you think that a vehicle that is battery powered will start better at 30 below zero?

The other thing is all climate models do not factor in the suns natural ebbs and flows of solar radiation into the supposedly scientific explanation for the warming.

Please allow for more discussion of supporting scientific theories that may make a difference in how you look at climate or weather!
