DEP,

I am writing to express my strong support of the Advanced Clean Car Standards II, because of the many benefits they will bring to Maine. The proposal not only expands consumer choices by giving Mainers access to more models of zero-emission cars and trucks each year, but it also ensures significant savings for Maine drivers, with electric vehicle refueling costs substantially lower than their gas counterparts.

As Maine's largest source of climate pollution, we can't address climate change without tackling pollution from cars and trucks. These standards, tailored to our state's climate goals, build on decades of experience in Maine adopting high standards for tailpipe pollution and fuel efficiency, and will cut pollution from cars and trucks by three-quarters. The flexibility embedded in the program ensures a feasible transition, and manufacturers have been clear that they will be able to meet the targets included in the program.

Last, Mainers want more clean cars. EVs on the road have tripled since 2020. Implementing these standards aligns with the growing public interest and ensures Maine will receive more zero-emission vehicle options from automakers over time.

I strongly urge the Maine Department of Environmental Protection to support the ACCII rule and drive a sustainable future for our state.

Sincerely,  
Daksh Prashar
