Maine needs to support the California standards 100% EV's CARS and PHEV's CAR's by 2035. More than half of Maine's greenhouse gas emissions from fossil fuels come from tailpipe pollution emitted by gas-powered vehicles. BUT BIG OIL always wins in US.

I need to know WHY it is taking so long for MAINE to adopt the California policy, every other state is ahead of us! Vermont, Massachusetts and New York already have adopted California's standards and Maine should also be joining right now!

Oh, December storm caused major flooding, and power outages for us 5 days but we were able to use our small gasoline generator to keep our EV car charged. 80% of Mainers do have small propane or gasoline generator.

Quote from Steve Jobs: " People don't know what they want until you show it to them."
