Re: Comments in Response to Proposed Adoption of Advanced Clean Cars II Program

Dear Ms. Cayting:

Cummins Inc. appreciates the opportunity to provide comments regarding the Maine Department of Environmental Protection's (DEP's) proposed regulation adoption of 06-096 C.M.R. Chapter 127-A, Advanced Clean Cars II (ACC II) Program. Cummins is a proponent of tough, clear, and enforceable regulations around the world in order to improve the environment while delivering what our customers need and shares Maine's goal to improve real-world emissions from the medium-duty vehicles (MDV) which are part of the ACC II rulemaking.

Cummins actively engaged in the California Air Resources Board's (CARB's) rulemaking process for ACC II. Proposed provisions in Chapter 127-A would adopt by reference CARB's Low-Emission Vehicle IV (LEV IV) requirements in 13 CCR 1961.4 for chassis-certified MDV and associated inuse testing requirements. Those Class 2b and 3 MDV (i.e., vehicles with 8,500-14,000 lbs Gross Vehicle Weight Rating (GVWR)), are manufactured as complete vans and pickup trucks. MDV pickup trucks can have significant towing capability and are often used in applications going beyond personal use such as construction and agriculture, and as such, do vital work for owners across the nation, including in Maine. In our May 2022 written comments¹ to CARB's ACC II rulemaking, Cummins expressed technical concerns with adopting in-use testing requirements and standards which CARB had developed for their Heavy-Duty (HD) Omnibus Low Oxides of Nitrogen (NOx) rule for HD engine certification and compliance and applying them directly to chassis-

¹ See <u>https://www.arb.ca.gov/lists/com-attach/396-accii2022-UDMBcl0xVWsAbwNt.pdf</u>.

certified MDV in LEV IV. Those concerns remain and apply similarly for DEP's adoption of CARB's LEV IV rule.

More recently, the U.S. Environmental Protection Agency (EPA) proposed Multi-Pollutant Emissions Standards for Model Years 2027 and Later Light-Duty and Medium-Duty Vehicles² which include new NOx certification and in-use standards for MDV. CARB and HD manufacturers including Cummins also recently entered into an agreement³ which includes a commitment by CARB to align their 2027 HD Omnibus Low NOx regulation with EPA's 2027 HD NOx regulation recently finalized as part of the Clean Trucks Plan. While the agreement for alignment on 2027 HD standards does not directly address Cummins' MDV ACC II concerns noted above, it does offer insight into possible additional alignment paths which could address those concerns. Cummins looks forward to working with Maine DEP, other states, CARB, and EPA to explore those paths in the future.

For any questions, please contact me via email at: jackie.m.yeager@cummins.com.

Sincerely,

Jackie M. Yeager
