Working Together for Safe Drinking Water

Drinking Water Construction Project Report

2009

with funding from the American Recovery and Reinvestment Act of 2009 & Drinking Water State Revolving Fund
Dear Readers,

The State of Maine Drinking Water Program received $19.5 million from the American Reinvestment and Recovery Act of 2009 (ARRA) to invest in public water system infrastructure improvements. This document highlights the tremendous benefits Maine has realized by leveraging existing funding sources and rapidly funding approximately $40 million worth of infrastructure improvements. This effort allowed our Program to make essential public health improvements and put people to work at a time of great need.

Our thanks go to our Congressional Delegation for their support of ARRA, to Governor Baldacci and the Legislature for their continued support of our Drinking Water State Revolving Fund, to consultants, public water system operators and to contractors for their ability to begin work quickly on these projects.

A special thanks to the dedicated staff at the Department of Health and Human Services Drinking Water Program (DWP) and the Maine Municipal Bond Bank. The support of Environmental Protection Agency Region 1 staff in Boston was also instrumental in assisting Maine in leading the Nation in project commitments and spending.

Yours for Safe Drinking Water,

Roger L. Crouse, PE.
Director, Maine CDC Drinking Water Program

“For Mick Construction, this project came at a time when we really needed the work. It was the first big project where we were low bidder and it didn’t come until June. This allowed us to bring back four people from winter layoff and keep them busy through November 2009.”
- Steve Miller, PE., Mick Construction

“This investment will create more jobs, and improve public health and safety, but it also promotes economic development.”
-Governor John E. Baldacci
April 10, 2009

“This project would definitely not have been undertaken in 2009 without ARRA funds.”
-Wes Haskell, Assistant General Manager at Bangor Water District

"Critical projects in Maine’s infrastructure are improving quality of life and commerce throughout the State, providing good paying jobs."

-Governor John E. Baldacci
June 29, 2009

"We are pleased to work with the Obama Administration, our Maine Congressional Delegation and the Maine Legislature to ensure that federal Recovery Act funds have the desired impact of creating jobs and improving our health and infrastructure."

-Governor John E. Baldacci
April 10, 2009
Executive Summary

The American Recovery and Reinvestment Act of 2009 (ARRA) provided an additional $19.5 million towards public health improvements in Maine public water systems. ARRA also provided a rapid infusion of capital which created or retained needed jobs across the State of Maine.

On February 17, 2009, President Barack Obama signed ARRA into law. Nationally, the Drinking Water State Revolving Fund (DWSRF) received $2 billion, of which Maine received $19.5 million. Public water systems across the State submitted over $111 million worth of project requests in 2009.

The Maine Department of Health and Human Services (DHHS) Drinking Water Program has successfully managed the DWSRF since 1997. The DWSRF was created by Congress as part of the 1996 amendments to the federal Safe Drinking Water Act. Each State must provide a 20 percent State Match, in order to access the annual federal grants (ARRA funding did not require State Match). As of December 31, 2009, Maine DHHS has provided approximately $150 million in loans and grants to public water systems in Maine. The State Match investment over the 13-year period has been $21.7 million.

In calendar year 2009, DHHS combined the $19.5 million in ARRA funding with $20 million in funding available through the regular DWSRF program, in order to commit approximately $40 million to public water systems across the State in six months.

Special provisions of the ARRA funding required that 20 percent be used to fund “green” infrastructure projects that either reduced energy consumption or conserved water. Maine DHHS was able to find qualifying “green” projects within the highest priority projects so a separate solicitation for “green” projects was unnecessary.

The ARRA also required that at least 50 percent of the ARRA grant be in the form of “additional subsidies,” such as grants. Because ARRA was combined with regular DWSRF funds, the Maine DHHS was able to provide every water system with at least a 30 percent grant. Systems historically receiving grants through Maine’s disadvantaged system program received a larger grant: up to 75 percent.

Because of the urgency to create/retain jobs quickly, ARRA included a goal of having at least 50 percent of the funds under contract within 120 days (June 17, 2009). To help meet this goal, the Drinking Water Program offered zero-interest loans to all water systems with their projects under contract by July 1, 2009. The incentive worked, and Maine was one of only two DWSRF programs nationally to meet the June 17, 2009 goal.

All ARRA funds not under contract by February 17, 2010 would be reallocated to other States. Because of the interest incentive program and the decision to blend regular DWSRF money with ARRA, Maine achieved the statutory requirement of having all funds under contract on August 24, 2009 – almost six months early.

By the February 17, 2010 deadline, Maine continued to lead the nation by having 83 percent of the ARRA funds spent.
Public Water Systems throughout Maine receiving 2009 DWSRF/ARRA Infrastructure Funding
Thanks to ARRA funding...

Thanks to the ARRA funding, Maine was able to commit approximately $40 million to public water systems across Maine for infrastructure improvement projects in 2009. This allocation resulted in a significant increase in funds available to public water systems compared to previous years. As a result of the significant increase in funding, more drinking water improvement projects were completed, improving drinking water quality and safety for people throughout Maine.
Working Together for Safe Drinking Water

February 24, 2010
The Honorable Olympia J. Snowe, United States Senator 40 Western Ave., Room 408C, Augusta, Maine 04330

Dear Senator Snowe:

On behalf of all our grantees, thank you for your part in crafting and passing the Recovery and Reinvestment Act. As we reach the first anniversary of the Recovery and Reinvestment Act, we are proud to report that significant accomplishments have been achieved. EPA's $10.7 billion recovery investment is a testament to your leadership and the commitment of our nation to achieve our goals.

EPA's funding for projects in Maine totaled $9.8 million, the majority of which went to municipalities and towns. This funding has been instrumental in providing clean and safe drinking water to Maine residents.

EPA's funding for projects in Maine totaled $10.8 million, the majority of which went to municipalities and towns. This funding has been instrumental in providing clean and safe drinking water to Maine residents.

Maine has consistently been delivering the fastest rates to put Recovery Act funding to work. EPA's funding for projects in Maine has been awarded to municipalities and towns, and these funds have been used to make necessary improvements to water systems and drinking water infrastructure.

Maine's Recovery Act dollars have been used to clean up a low-grade wastewater treatment plant in South Portland, which has doubled its capacity to meet the needs of industrial and municipal wastewater treatment. The state of Maine expects to complete this project within 30 months, which is a significant accomplishment.

I am confident that these funds will be used to improve infrastructure and provide clean drinking water to residents, and to create new jobs and keep our community strong.

Sincerely,

R. Curt Steel
Regional Administrator

cc: Brenda Harvey, Public Information Officer

nect the Honorable John E. Baldacci
Governor of Maine
1 State House Station
Augusta, Maine 04333

Dear Governor Baldacci:

I congratulate you on Maine's success in moving the February 17, 2010, American Recovery and Reinvestment Act (ARRA) deadline for using Clean Water and Drinking Water State Revolving Funds (SRF) for projects. EPA and our partners have made significant accomplishments in the Recovery Act's first year, and the job creation and environmental dividends are still ahead. I look forward to continuing the review of Recovery Act projects with you over the course of 2010.

Thanks again for your steadfast support for Maine's public health and the environment.

Sincerely,

[Signature]

cc: Brenda Harvey, Public Information Officer

</table>
ARRA Milestones

One goal of ARRA was to have at least 50 percent of the funds under contract within 120 days (June 17, 2009). Not only did Maine meet this goal, but it was one of only two DWSRF programs nationally to meet this goal. Additionally, Maine was the first state in the nation to successfully have 100 percent of ARRA funds under contract, to both create jobs and complete needed projects around the state.
ARRA Provisions & Opportunities

The $19.5 million in additional funding received from ARRA for drinking water system improvement projects provided unique provisions and opportunities for the 2009 construction season. For one, a portion (20%) of the ARRA funding was required to be spent on “Green Reserve” projects, or those that demonstrate energy efficiency, water efficiency, or are environmentally innovative. The ARRA funding also allowed for all water systems to receive at least 30% of their original requested loan amount as a grant, resulting in more affordable funding for water systems and their customers. Another unique benefit was the creation of over 280 full-time equivalent jobs throughout Maine.

Affordable Funding to Maine Utility Ratepayers

All public water systems completing projects received at least 30% of their originally requested loan amount as a grant, which resulted in nearly $13 million of savings to ratepayers. The majority of 2009 DWSRF/ARRA loans were awarded at 0% interest, which, compared to a 5% rate, amounted to a total savings to ratepayers over the standard 20-year loan period of $23.8 million.

Job Creation

Between April 2009 and March 2010, $16.3 million in ARRA stimulus funds were disbursed to Maine public water systems for design and/or construction of drinking water infrastructure improvements. These funds were responsible for creating over 280 quarterly fulltime equivalent (FTE) jobs directly working on stimulus-funded projects. This chart depicts the breakdown of data by quarter.
Green Reserve Projects

As a requirement of the 2009 ARRA, the Maine Drinking Water Program needed to identify at least $3.9 million in spending on “Green Reserve” (20% of $19.5 million).

The term “Green Reserve” applies to water projects that demonstrate energy efficiency, water efficiency or are environmentally innovative. Examples include new or rehabilitated facilities with components, such as passive solar or geo-thermal heating systems, premium efficiency pumps and motors, variable frequency drives, etc.

The Maine DWP was able to identify projects meeting the green reserve criteria in the amount of $4.5 million. Significant Green Reserve projects in 2009 included the Aqua Maine Camden/Rockland Ultraviolet Light Water Treatment Plant and the Lewiston-Auburn Ultraviolet Light Water Treatment Plant. The following projects were identified, in part, as meeting the “Green Reserve” criteria:

</table>

**TOTALS:** $19,011,358 $4,499,800
**Portland Water District**

**Towns Served:** SANFORD  
**Population Served:** 15,000  
**Contractor:** Foglio Inc, Apex  
**Engineer:** Wright-Pierce  
**DWSRF/ARRA Funds Contributed to Project:** $1,557,100  
Sanford Water District utilized 2009 DWSRF/ARRA funds to replace approximately 2,200 feet and extend approximately 3,000 feet of water mains within the District. The project eliminates a dead end by looping the High Street water main to the main along Alfred Road, improving water quality, pressure, and fire-flow protection. Sanford Water District is in the process of completing a second project to construct a small addition to the existing Old Mill Pumping Station and install an emergency power propane generator. The additions to the Old Mill Pumping Station will improve chemical storage and containment at the District and will help to reduce operational costs. Additionally, tank mixing systems and Chloro-Float in-tank disinfection systems will be installed in two storage tanks to address water quality issues created, in part, by stagnant and stratified water.

**Berwick Water Department**

**Towns Served:** BERWICK  
**Population Served:** 2,125  
**Contractor:** Mick Construction  
**Engineer:** Civil Consultants  
**DWSRF/ARRA Funds Contributed to Project:** $849,710  
This project enabled Berwick Water Department to install a new diesel-powered generator that can provide power for a week of normal water treatment plant operation, without refueling and turns on automatically if the power fails. Berwick can keep producing, treating, and delivering water to its customers now, even in the event of a power outage. Berwick also replaced water mains and added new fire hydrants along nine streets, totaling approximately 6,000 feet. Galvanized iron, copper, and cast iron water mains were replaced with ductile iron water mains. Age, deterioration, and community growth made water main replacement, updates, and hydrant additions a necessary undertaking.

“Our power was out for 37 hours, but we were filtering water and pumping it out like it was a normal day.”

-Nelson Begin, Operator at Berwick Water Department referring to a recent power outage after the generator was installed and placed on standby

**Sanford Water District**
The Camden & Rockland Division of Aqua Maine is utilizing ARRA and DWSRF funds to design and construct a membrane filtration treatment system at the Mirror Lake disinfection facility in Rockport. Adding membrane filtration treatment will enable Aqua Maine to comply with new regulations concerning specific treatment for Cryptosporidium, a chlorine-resistant microbiological pathogen, and new restrictions on disinfection byproducts within the distribution system. The membrane filtration treatment provides additional public health protection and improved aesthetic water quality. As a result of the additional treatment, facility redundancy and reliability will also be improved to ensure that system demands are met during emergencies. Additionally, Aqua Maine completed a project for the design and construction of a new elevated water storage tank to replace an existing elevated water storage tank, known as the Thomaston tank. The Thomaston tank was constructed in 1927, and was last painted in 1987. After 80 years of useful life, the tank was in need of major renovation or replacement. The new 400,000 gallon replacement water storage tank was built adjacent to the old Thomaston Tank.

“Our membrane filtration project at Mirror Lake is the first large-scale application of membrane filtration technology in Maine. Membrane filtration is less expensive to own and less expensive to operate than other filtration technologies. The technical staff at the Drinking Water Program have been very supportive of our use of membrane technology and the project approval process has been very efficient as a result.”

-Rick Knowlton, Vice President at Aqua Maine

Bowdoinham Water District

Towns Served: BOWDOINHAM

Population Served: 675

Contractor: Boart Longyear

Engineer: Wright-Pierce

DWSRF/ARRA Funds Contributed to Project: $149,000

Bowdoinham Water District was able to install a new well to use as a backup, or alternative well, using 2009 DWSRF/ARRA funds. The existing well was originally installed in 1959, when the Bowdoinham Water District was first established. In recent years, the District has experienced pump problems related to the deteriorating condition of the well. This project allowed Bowdoinham to install a new well as an alternative water source to draw from, as well as redevelop the existing well. The project enables the District to conduct maintenance on both wells, without interrupting water service to its customers.
**Auburn Water District/Lewiston Water & Sewer Division**

- **Towns Served:** Auburn, Lewiston
- **Population Served:** 39,071
- **Contractor:** CDM
- **Engineer:** CDM
- **DWSRF/ARRA Funds Contributed to Projects:** $7,991,800

This project provides funding to support a joint venture between Auburn Water District and Lewiston Water and Sewer Division for the final design and construction of an Ultra-Violet (UV) Light Treatment System at Lake Auburn, the drinking water source for both Auburn and Lewiston. This project is intended to meet requirements of the Long Term 2 Enhanced Surface Water Treatment Rule. Installation of the UV Treatment System will improve the drinking water quality for Auburn and Lewiston and provide additional protection from disease-causing microorganisms and contaminants that can form during drinking water treatment.

---

**Bangor Water District**

- **Towns Served:** Orrington, Hermon, Hampden, Bangor, Eddington, Clifton, Veazie
- **Population Served:** 26,500
- **Contractor:** Pre-Load Construction
- **Engineers:** Wright-Pierce, Black & Veatch
- **DWSRF/ARRA Funds Contributed to Projects:** $2,086,790

Two projects for Bangor Water District utilized ARRA/DWSRF funding in 2009. The first project provides funding support for Bangor Water District to complete a conceptual design study to meet the requirements of the Long Term 2 Enhanced Surface Water Treatment Rule, to further protect against disease-causing microorganisms and contaminants that can form during drinking water treatment. The study will evaluate treatment alternatives, such as Ultra-Violet (UV) disinfection for cryptosporidium inactivation, pump station modifications for the additional treatment, and intake location evaluation to improve water quality. The second project for Bangor Water District involves replacing one steel water storage tank over 50 years old with a new 3.8 million gallon wire-wound, pre-stressed concrete tank. The new concrete tank is expected to significantly lower the maintenance costs, as compared with maintaining the existing steel tank. The new tank will also contain a mixing system installed to improve water quality. The new tank is being constructed in the same location as the old steel tank, on Essex Street.
**Towns Served:** VASSALBORO

**Population Served:** 205

**Contractor:** Bowie Bros.

**Engineer:** AE Hodsdon Engineering

**DWSRF/ARRA Funds Contributed to Project:** $151,000

East Vassalboro will utilize 2009 DWSRF/ARRA funds to install a new well to supplement the existing two low-yielding wells. The project will include a new well and pump, land acquisition for wellhead protection, and security fencing for the proposed and existing wells.

---

**Great Salt Bay Sanitary District**

**Towns Served:** DAMARISCOTTA, NEWCASTLE

**Population Served:** 1,673

**Contractor:** Penta Corp.

**Engineer:** Wright-Pierce

**DWSRF/ARRA Funds Contributed to Project:** $45,640

Great Salt Bay Sanitary District undertook a project to replace approximately 800 linear feet of 6-inch diameter, 1896 vintage, cast iron water main with 8-inch cement-lined ductile iron water main on Church Street in Damariscotta. The existing cast iron pipe is believed to be joined with lead, and replacement helps the Water District address lead exceedances. In addition, this work was performed in conjunction with storm drain replacement and road reconstruction.

---

**Port Clyde Water District**

**Towns Served:** ST. GEORGE

**Population Served:** 330

**Contractor:** Penobscot Co.

**Engineer:** Dirigo Engineering

**DWSRF/ARRA Funds Contributed to Project:** $233,000

Port Clyde Water District constructed a booster pump station at their storage tank site. This booster pump station provides all customers with adequate water pressure without the need for individual booster pumps. This project especially helps those people living on Marshall Point Road and Drift Inn Road who had been experiencing low water pressure problems. The new pump station also enables better circulation in the storage tank, improving water quality.
**Brewer Water Department**

**Towns Served:** BREWER, CLIFTON, EDDINGTON, HOLDEN, ORRINGTON

**Population Served:** 8,982

**Contractor:** Lou Silver, Inc

**Engineer:** Mike Riley

**DWSRF/ARRA Funds Contributed to Project:** $793,000

Brewer Water Department embarked on two major projects using 2009 DWSRF/ARRA funds. The first one involved the installation of an interconnection facility along Route 9 in Eddington, which allows for the transfer of up to three million gallons of water per day between the Brewer water system and the Bangor water system during emergencies. This new interconnection benefits both the Brewer and Bangor water systems, allowing a backup source of water for each system, in the event of an emergency. The second project involves the installation of a second raw water intake and screen to improve raw water quality, consistency, and treatability within the Brewer Water Department. The new 24-inch diameter intake will extend from the existing pump station approximately 550 feet into the pond. The intake will be designed to minimize the impact on aquatic life.

---

**Auburn Water District**

**Towns Served:** AUBURN

**Population Served:** 15,963

**Contractor:** W. Walsh Company

**Engineer:** CDM

**DWSRF/ARRA Funds Contributed to Project:** $500,000

With ARRA and DWSRF funds, the Auburn Water District was able to complete a project that improved and enhanced their water main transmission and distribution piping. This project cleaned and cement-lined over 5,700 feet of existing cast iron piping, eliminating low pressure and water quality issues.

---

**Belfast Water District**

**Towns Served:** BELFAST, NORTHPORT

**Population Served:** 4,328

**Contractor:** George C. Hall & Sons

**Engineer:** Dirigo Engineering

**DWSRF/ARRA Funds Contributed to Project:** $1,306,000

Belfast Water District completed a project to upgrade existing water mains along Route 1 South and Perkins Road in Belfast. Old, undersized cast iron water mains were replaced with new ductile iron.
Richmond Utilities District

Towns Served: RICHMOND  
Population Served: 1,370  
Contractor: Boart Longyear  
Engineer: Wright-Pierce  
DWSRF/ARRA Funds Contributed to: $193,000

A new well was installed in Dresden to provide a redundant water supply well for Richmond Utilities District. This new well improves tank circulation and water quality in two existing water storage standpipes and increases system reliability and redundancy.

Presque Isle Water District

Towns Served: PRESQUE ISLE  
Population Served: 5,825  
Contractor: Penta Corp.  
Engineer: Wright-Pierce  
DWSRF/ARRA Funds Contributed to Project: $560,000

The Presque Isle Water District is working on a project to design and install an Ultra-Violet (UV) water disinfection system to improve drinking water quality for Presque Isle. The new treatment system will provide additional protection from disease-causing microorganisms and disinfection byproducts, contaminants that can form during drinking water treatment.

Southwest Harbor Water Dept.

Towns Served: SOUTHWEST HARBOR  
Population Served: 2,380  
Contractor: Sargent Construction  
Engineer: Olver Associates  
DWSRF/ARRA Funds Contributed to Projects: $954,000

Funding support for this project will allow Southwest Harbor Water Department to make water treatment facility upgrades and improvements to their raw water intake in Long Pond. Treatment facility upgrades will include the addition of an aeration system to help reduce disinfection byproduct levels. Also, the raw water intake will be extended to reduce elevated turbidity levels during storm events, and to improve water quality. This project also enhances water system reliability with the installation of an emergency power generator, to help keep operations running in the event of a power outage. These changes are also expected to increase operational efficiency and reduce chemical usage at the Southwest Harbor Water Department.

Bath Water District

Towns Served: BRUNSWICK, WOOLWICH, WEST BATH, WISCASSET, BATH  
Population Served: 9,280  
Contractor: Ray Labbe & Sons  
Engineer: Wright-Pierce  
DWSRF/ARRA Funds Contributed to Project: $621,330

Bath Water District used 2009 ARRA and DWSRF funds to complete a project to connect two “dead ends” within their water system piping, improving water quality. The connection, by eliminating “dead ends” and providing looping within the water system, also improved water flow for fire protection within the District.
Lake Arrowhead Community Inc.

Towns Served: WATERBORO  
Population Served: 2,750  
Contractor: In-house  
Engineer: Wright-Pierce  
DWSRF/ARRA Funds Contributed to Project: $180,000  

Using 2009 ARRA/DWSRF funds, Lake Arrowhead is replacing water piping from Old Country Way to their water storage tank on Caribou Drive in Limerick. Lake Arrowhead describes this water main as the most vulnerable to leaks, so replacing this piping will help improve overall water system reliability.

Nichols Trailer Park

Towns Served: HOLLIS  
Population Served: 75  
Contractor: Littlefield Construction  
Engineer: Snowden Consulting  
DWSRF/ARRA Funds Contributed to Project: $193,000  

Radionuclide levels found in the groundwater source at Nichols Trailer Park exceeded acceptable health levels. As a result, the park is developing a new well and installing treatment to remove uranium, arsenic, and radon to address the health concerns. The project will also include the construction of a new treatment building and approximately 3,000 gallons of water storage.

Winterport Water District

Towns Served: WINTERPORT  
Population Served: 760  
Engineer: Dirigo Engineering  
DWSRF/ARRA Funds Contributed to Project: $128,000  

This project will provide a back-up well for the Winterport water system. The back-up well was recommended in a previous engineering report, to allow for servicing of the existing well when needed, without disrupting continuous water service.

Kennebunk, Kennebunkport & Wells Water District

Towns Served: KENNEBUNK, KENNEBUNKPORT, WELLS  
Population Served: 29,963  
Contractor:  
Engineer: In-house  
DWSRF/ARRA Funds Contributed to Project: $2,207,000  

This project will replace approximately 9,820 feet of unlined 10 inch diameter cast iron water main with 16-inch diameter PVC pipe along Old King’s Highway and Sand Point Road in Kennebunkport. In addition, hydrants, lateral side mains, and service connections (district owned portions) will be replaced.
Portland Water District

**Towns Served:** FALMOUTH, RAYMOND, SCARBOROUGH, SOUTH PORTLAND, STANDISH, CAPE ELIZABETH, CUMBERLAND, GORHAM, WINDHAM, WESTBROOK, PORTLAND

**Population Served:** 136,945

**Contractors:** Gorham Sand and Gravel, R.J. Grondin & Sons, Foglio, Inc., Shaw Brothers, Marcel A. Payeur, Peters Construction, Storey Brothers, Glidden Excavating & Paving, Dearborn Construction

**Engineer:** In-House

**DWSRF/ARRA Funds Contributed to Projects:** $4,507,170

This effort consisted of multiple projects completed within the Portland Water District service area and replaced more than 22,200 feet of old water mains in various locations. Old galvanized and unlined cast iron water mains were replaced with cement-lined ductile iron pipe. These improvements reduced system maintenance expense and enhanced water quality and service reliability to numerous commercial, industrial, and residential customers. The construction included work on a number of streets including William Clark Drive, Stroudwater, Pleasant, Spring, Main, Berkley, and East Bridge Streets in Westbrook. Work also took place on Pond Cove in Cape Elizabeth and Elizabeth Street in Gorham. Work within Portland neighborhoods included Brighton Avenue, Ray, Hancock, Middle, Read, and Gilman Streets, as well as Vannah Avenue. Many of the projects were completed in conjunction with other municipal street improvement projects. In addition to the various water main improvement projects, Portland Water District also completed the painting and rehabilitation of the 500,000 gallon welded steel water storage tank constructed in 1951, located in Standish. The project included interior and exterior tank recoating with epoxy, tank base repairs to spalling concrete, and adding a rechlorination/recirculation system.

Kennebec Water District

**Towns Served:** FAIRFIELD, WATERVILLE, VASSALBORO, OAKLAND

**Population Served:** 21,500

**Contractor:** T.W. Clark

**Engineer:** In-House

**DWSRF/ARRA Funds Contributed to Projects:** $409,640.50

Kennebec Water District completed a project to replace approximately 2,945 feet of heavily tuberculated water main along Water Street in Waterville. Under sizing and heavy tuberculation in the old water main contributed to problems of inadequate flow and periodic water quality issues. Replacement of the main addressed both of these issues.
**Brunswick & Topsham Water District**

**Towns Served:** BRUNSWICK, TOPSHAM  
**Population Served:** 16,988  
**Contractor:** T. Buck Construction  
**Engineer:** Wright-Pierce  
**DWSRF/ARRA Funds Contributed to Project:** $560,000

To reduce disinfection by-products as required by the Surface Water Treatment Rule, the Brunswick & Topsham Water District will be constructing an ammonia-feed treatment system to implement the use of chloramines.

**Yarmouth Water District**

**Towns Served:** NORTH YARMOUTH, YARMOUTH  
**Population Served:** 7,430  
**Contractor:** R.J. Grondin & Sons  
**Engineer:** Wright-Pierce  
**DWSRF/ARRA Funds Contributed to Project:** $648,358.12

Yarmouth Water District replaced approximately 2,700 feet of an old, undersized and unlined cast iron water main located on Portland Street between Main Street and US Route 1. The old main was replaced using new 12-inch cement lined ductile iron pipe. Additionally, six fire hydrants, eight mainline gate valves, and 33 services were also replaced.

**Passamaquoddy Water District**

**Towns Served:** EASTPORT, PERRY  
**Population Served:** 1,870  
**Contractor:** S.H. Bridges Construction  
**Engineer:** A.E. Hodsdon Consulting  
**DWSRF/ARRA Funds Contributed to Projects:** $1,557,000

Passamaquoddy Water District is utilizing 2009 ARRA and DWSRF funds to replace 8,100 feet of old water mains and to conduct a study to determine if treatment system changes are needed to meet compliance with disinfection byproducts regulations. The replacement of the old water mains will help to improve water quality and fix low pressure, fire protection, and freeze-up issues. The study will help determine how best to protect customers from contaminants that can form during drinking water treatment, known as disinfection byproducts.

Interaction with the State was very good. They were quick and thorough with all of our work. Everyone pulled together well."

—Robert MacKinnon, Superintendent at Yarmouth Water District
**Greater Augusta Utility District**

**Towns Served:** AUGUSTA, CHELSEA, MANCHESTER, VASSALBORO, WINTHROP

**Population Served:** 14,450

**Contractor:** D & C Construction

**Engineer:** Woodard & Curran

**DWSRF/ARRA Funds Contributed to Project:** $190,000

Greater Augusta Utility District replaced approximately 1,350 feet of water main and services on Eastern Avenue, beginning at Hospital Street and proceeding west to Arsenal Street. The existing cast iron, problematic water main was installed prior to 1906. This project is part of a full roadway reconstruction project done by USVA Togus and significant savings occurred by replacing this water main in conjunction with the road reconstruction project.

**Princeton Water District**

**Towns Served:** PRINCETON

**Population Served:** 50

**Contractor:** S.E. MacMillan

**Engineer:** Dirigo Engineering

**DWSRF/ARRA Funds Contributed to Project:** $412,800

2009 DWSRF/ARRA funds are being used to consolidate the Princeton Water Works water system with the Princeton Water District, eliminating an unfiltered surface water supply and providing new distribution lines for these consumers. This effort is part of a larger project that provided safe drinking water to homes with wells contaminated by MTBE, consolidated drinking water service to a senior citizen apartment complex, looped water mains, and replaced aging water lines.

“"There was very good cooperation between the funding agencies in helping a new District get through the construction project."

- Tim Sawtelle, Dirigo Engineering

**Madawaska Water District**

**Towns Served:** MADAWASKA

**Population Served:** 2,853

**Contractor:** Penta Corporation

**Engineer:** Wright-Pierce

**DWSRF/ARRA Funds Contributed to Project:** $313,900

Madawaska Water District is replacing the existing, undersized booster station pumping equipment located on 11th Avenue with new and improved equipment. This new equipment is expected to improve water pressure and water system reliability.

“"We were able to design the project to be constructed with minimal impact on the District’s daily operations."

-Naleen Mayberry, Wright-Pierce
St. Francis Water District

**Towns Served:** ST FRANCIS

**Population Served:** 80

**Contractor:**

**Engineer:** Woodard and Curran

**DWSRF/ARRA Funds Contributed to Project:** $349,423

To resolve disinfection byproduct violations related to their surface water source, St. Francis Water District will be completing a project to transition from a surface water source to a ground water source. The project includes installation of raw water transmission mains, a pump house, and a chlorination system.

Pittsfield Water Department

**Towns Served:** PITTSFIELD

**Population Served:** 3,143

**Contractor:** T. Buck Construction

**Engineer:** Olver Associates

**DWSRF/ARRA Funds Contributed to Project:** $103,000

The Pittsfield Water Department is undertaking a project to install a second 75 HP vertical turbine finished water pump at their water treatment plant. The new water pump will ensure redundancy and improve service reliability to water customers, including a regional hospital, medical facilities, regional educational center, commercial businesses, as well as numerous residential customers.

Calais Water Department

**Towns Served:** CALAIS

**Population Served:** 3,075

**Contractors:** Sargent Corp, Peasley & O’Halloran

**Engineer:** Olver Associates

**DWSRF/ARRA Funds Contributed to Project:** $1,096,000

Calais Water Department is completing a project to replace 1,000 feet of water main on Cleveland Street. This water main replacement project will resolve multiple failures of the existing main during the last two years. Work will be coordinated with sewer infrastructure projects, which are currently being completed on this street. Calais is also completing a second project to replace approximately 3,625 feet of water main on Lafayette, Price, and Poole Streets to improve water pressure, reduce iron contamination, and reduce leak related maintenance.

Aqua Maine Inc. Skowhegan Division

**Towns Served:** SKOWHEGAN

**Population Served:** 5,953

**Contractor:** T.W. Clark, Inc

**Engineer:** In-house

**DWSRF/ARRA Funds Contributed to Project:** $260,865

The Skowhegan Division of Aqua Maine is using ARRA and DWSRF funds to replace 1,150 feet of water main piping on Route 201 in Madison. The water main replacement work is being done in conjunction with paving work that the Maine Department of Transportation is doing on Route 201, resulting in coordinated efforts and lower project costs. The replacement of the water main piping will help to improve water quality, fire protection, and system reliability.
**Orono-Veazie Water District**

- **Towns Served:** Orono
- **Population Served:** 6,000
- **Contractor:** Penta Corporation
- **Engineer:** Weston & Sampson
- **DWSRF/ARRA Funds Contributed to Project:** $3,600,000

This project provides funding support to the Orono-Veazie Water District to make improvements to their water treatment plant. The project involves replacement of three pressure filters, and an upgrade of three additional pressure filters, piping and controls, chemical feed systems, and connecting a new well to the water system. Additionally, the District will construct a backwash residuals tank, recycling system, and an upgrade of the electrical service to the facility. The project goal is to increase operational efficiency and achieve the requirements of the discharge permit for backwash water.

---

**Old Town Water District**

- **Towns Served:** Old Town
- **Population Served:** 8,858
- **Contractor:** T. Buck Construction
- **Engineer:** CES
- **DWSRF/ARRA Funds Contributed to Project:** $360,000

Old Town Water District undertook a project to update their treatment plant on Spring Street. The updates included sandblasting, recoating, and replacing internal plumbing for four steel pressure tanks, restoring them to near new condition. Additionally, the spent greensand inside the existing filter was replaced with a higher flow type greensand, which will lower electrical costs and increase production. Lastly, water piping from the three Spring Street wells was replaced. Replacement of the water piping from these three wells helps eliminate the need to shut down their entire water supply for extended periods of time to make repairs, improving overall water system reliability.

---

**Bingham Water District**

- **Towns Served:** Bingham, Moscow
- **Population Served:** 1,308
- **Contractor:** Joseph Buchanan Construction
- **Engineer:** Dirigo Engineering
- **DWSRF/ARRA Funds Contributed to Project:** $334,000

Bingham Water District added looping to their water mains on dead-end residential streets. This project has increased water pressure and greatly improved water quality.

---

*“Biggest Benefit? Significant, documented, energy savings.”*  
-Frank Kearney,  
Superintendent at Old Town Water District
