Maine Weekly Influenza Surveillance Report

May 2, 2007

Synopsis
During the week ending April 28, 2007 (MMWR week 17)*, local influenza activity was reported in Maine. A decrease was observed during week 17 in outpatient visits for influenza-like illness, hospital admissions associated with respiratory illness, and pneumonia and influenza-associated deaths. One outbreak of influenza was reported during the week ending April 28, 2007 in a mid-coast region long-term care facility.

Moderate Disease Surveillance

Outpatient influenza-like illness (ILI)
During the week ending April 28, 2007, 0.8% of sentinel provider outpatient visits were due to ILI (range 0% - 4.2%).

Severe Disease Surveillance

Hospital inpatients
During the week ending April 21, 2007 (week 16), 3.0% of admissions reported by two hospitals were due to respiratory illness (range 2.7% - 3.3%). During the week ending April 28, 2007 (week 17), 1.6% of admissions reported by two hospitals were due to respiratory illness (range 1.0%-2.2%).

* At time of publication, reporting may be incomplete. Numbers presented here may change as more reports are received.
Laboratory Reporting

During the week ending April 28, 2007, six respiratory specimen was submitted to the Maine Health and Environmental Testing Laboratory (HETL) for influenza culture. Of these, two (33.3%) were positive for influenza B and results are pending on the remaining four specimens. As of April 28, 2007, a total of 216 respiratory specimens have been submitted for culture and/or PCR to HETL since the influenza surveillance season began on October 1, 2007. Of these specimens, 36 (16.7%) were culture or PCR-positive for influenza (7 for influenza A [H1], 5 for influenza A [H3], 16 for influenza A [unsubtyped], and 8 for influenza B), four (2.0%) specimens were presumptive positive for enterovirus, three (1.5%) specimens were positive for adenovirus, one (0.5%) specimen was positive for RSV, four (2.0%) specimens were not tested, results are pending for nine specimens, and the remaining specimens were negative.
During the week ending April 28, 2007, a total of 4 respiratory specimens were submitted to one private reference laboratory in Maine. Two (50.0%) of these specimens were positive for influenza (1 for influenza A and 1 for influenza B). As of April 28, 2007, a total of 1,592 respiratory specimens have been submitted for viral testing to two reference laboratories in Maine since the influenza surveillance season began on October 1, 2006. Of these, 252 (15.8%) specimens were positive for influenza (245 for influenza A and 7 for influenza B), 262 (16.5%) were positive for RSV, 1 (0.1%) specimen was positive for parainfluenza 2, 10 (0.6%) were positive for parainfluenza-3, 15 (0.9%) were positive for adenovirus, 13 (0.8%) specimens were positive for enterovirus, and the remaining specimens were negative.
**Outbreaks**

During the week ending April 28, 2007, one outbreak of influenza was reported in a mid-coast region long-term care facility. To date, nine outbreaks of influenza have been reported in Maine this season.

*Outbreak definition is specific to facility type. An outbreak in long-term care facilities (LTC) is defined as ≥3 patients with ILI identified on same floor or ward during a short (e.g., 48-72 hour) period OR ≥1 patients with lab-confirmed influenza; an outbreak in an acute care facility is defined as ≥1 patients with ILI or lab-confirmed influenza with symptom onset ≥48 hours post-admission (i.e., nosocomial); and an outbreak in a school is defined as ≥15% absentee rate among student population due to ILI or lab-confirmed influenza. ^ Data unavailable.

**Fatalities Surveillance**

**Death Certificates**

During the week ending April 28, 2007, 7.1% of deaths reported by three city vital records offices were attributable to pneumonia and influenza (range: 4.5% - 15.0%).

**Percentage of Deaths Attributable to Pneumonia and Influenza**

– Maine, New England and the United States, 2005-07
^ New England includes the following reporting areas: Boston, MA; Bridgeport, CT; Cambridge, MA; Fall River, MA; Hartford, CT; Lowell, MA; Lynn, MA; New Bedford, MA; New Haven, CT; Providence, RI; Somerville, MA; Springfield, MA; Waterbury, CT; Worcester, MA.

**Pediatric Fatalities**
As of April 28, 2007, no influenza-associated pediatric deaths have been reported in Maine this season.

**National Influenza Activity**
State health departments report the estimated level of influenza activity in their states each week. States report influenza activity as: 1) no activity, 2) sporadic, 3) local, 4) regional, or 5) widespread (definitions of these levels can be found at: [www.cdc.gov/flu/weekly/usmap.htm](http://www.cdc.gov/flu/weekly/usmap.htm)). Maine reported local influenza activity for the week ending April 28, 2007. Attached below is the weekly influenza activity estimate report for the week ending April 21, 2007.
