

Diabetes

Diabetes mellitus, if left unidentified or managed poorly, can lead to problems that include urgent emergency department visits and hospitalizations, a higher risk of heart attack, blindness, kidney disease, or amputation. Most cases of diabetes are preventable or lead to a chronic condition that can be managed only if adequate supports are available and used.

Many Mainers are currently at risk for or have diabetes but are unaware of it. Once diagnosed, diabetes is a challenging disease with which to live, and creates costs for families, employers, communities, and the State’s health care safety net system.

For more information, contact the Maine Diabetes Prevention and Control Program at www.maine.gov/dhhs/bohdcfh/dcp/.
