

Maine Weekly Influenza Surveillance Report

2024-2025 Influenza Season

April 1, 2025

Data for MMWR week 13 (ending 3/29/2025)

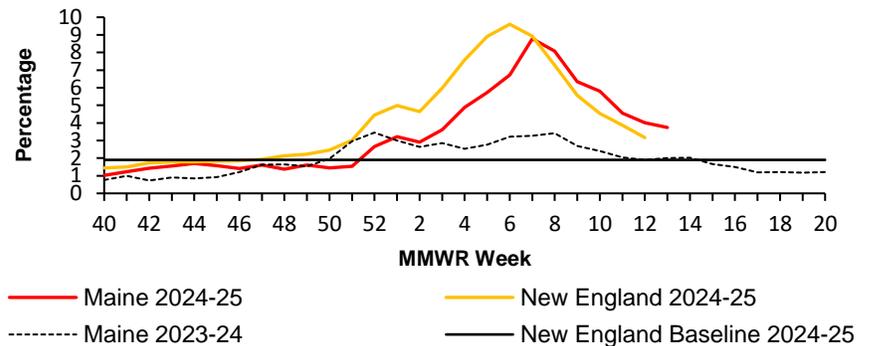

U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet)

Percent of Outpatient Health Care Visits Due to ILI
3.74

Number of ILINet Reporting Providers
45

Outpatient Visits for ILI – ILINet, Maine, 2023-25

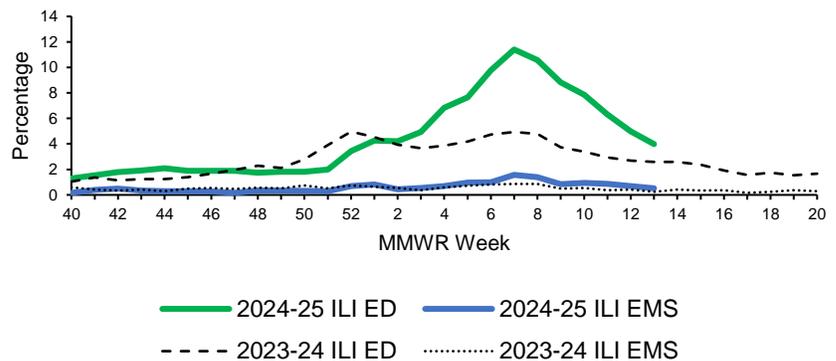

Syndromic Surveillance

Percent of Emergency Room (ED) Visits Due to ILI
3.98

Percent of Emergency Medical Services (EMS) calls for ILI
0.52

Syndromic Surveillance data for ILI – Maine, 2023 -25

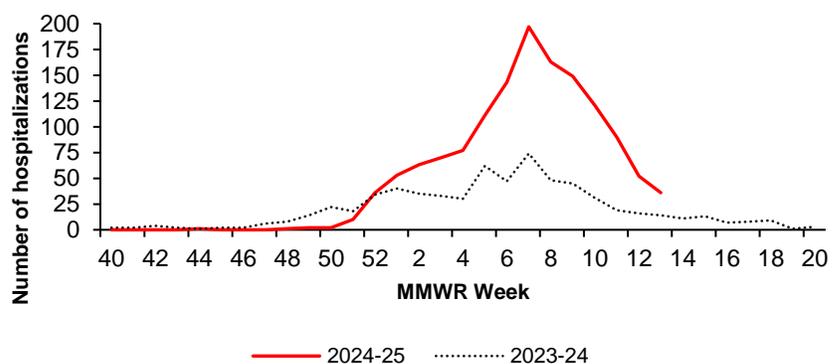

Hospitalizations

Influenza-Associated Hospitalizations This Week
36

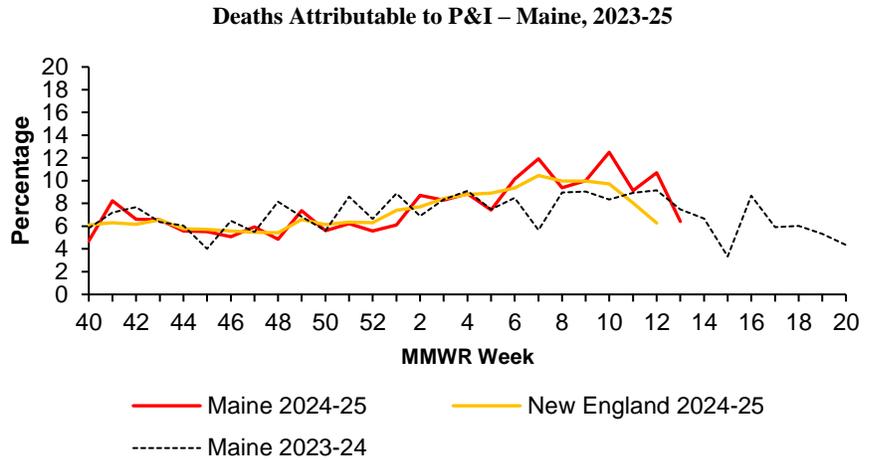

Total Influenza-Associated Hospitalizations This Season
1,377

Influenza Hospitalizations – Maine, 2023-25

Pneumonia and Influenza (P&I) Deaths

Percent of Deaths Due to P&I	6.4
Influenza-Associated Deaths This Week*	0
Total Influenza-Associated Deaths This Season*	89
Pediatric Influenza-Associated Deaths This Season	1

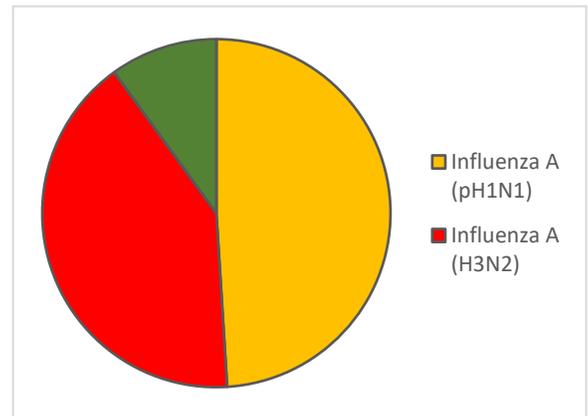

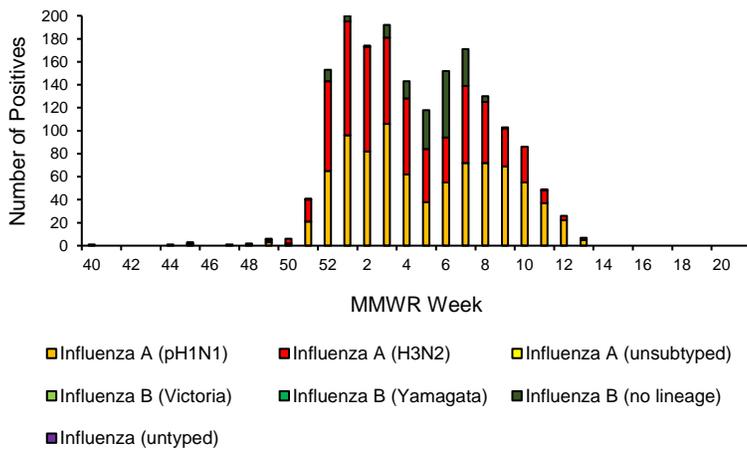

*This number represents the number of individuals who had influenza specifically listed on their death certificate. This is likely an underrepresentation of the true burden, as many influenza-associated deaths are due to secondary infections. This is why Maine CDC reports Pneumonia and Influenza (P&I) deaths.

Virologic Surveillance

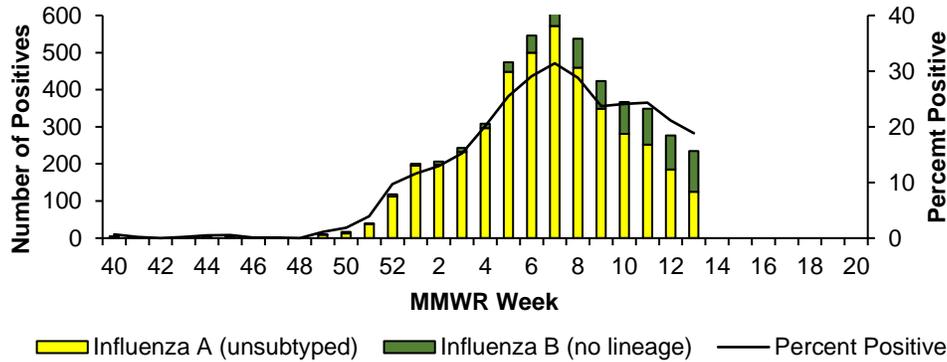

Health and Environmental Testing Laboratory	Week 13	2024-25 Season
No. of specimens tested	8	1,903
No. of positive specimens	7 (88%)	1,765 (93%)
<i>Positive specimens by type</i>		
Influenza A		
(H1N1)pdm09	5 (71%)	865 (49%)
H3N2	2 (29%)	724 (41%)
Influenza B		
Yamagata lineage	-	-
Victoria lineage	-	-

Influenza Positive PCR Tests, HETL – Maine, 2024-25

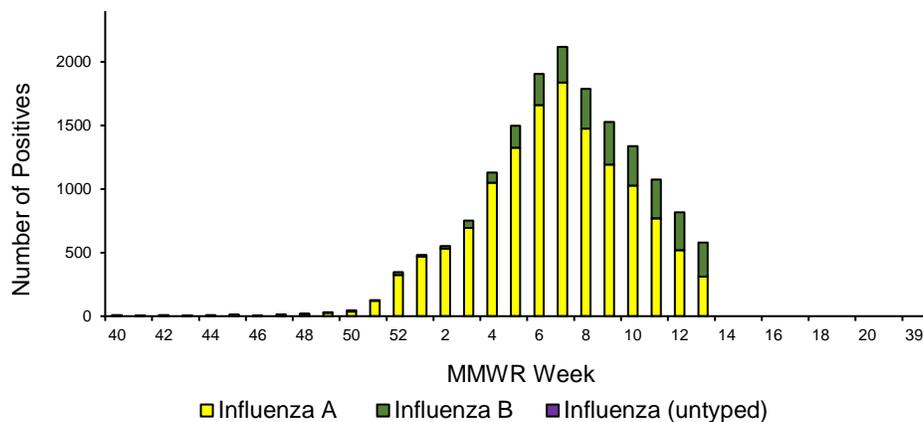

Maine Reference Laboratories	Week 13	2024-25 Season
No. of specimens tested	1,248	30,879
No. of positive specimens (%)	235 (19%)	4,489 (15%)
<i>Positive specimens by type</i>		
Influenza A	125 (53%)	3,973 (89%)
Influenza B	110 (47%)	516 (11%)

Influenza Positive Tests, Maine Reference Labs – Maine, 2024-25

All Reported Laboratory Results	Week 13	2024-25 Season
No. of specimens positive by antigen test	121	3,378
No. of specimens positive by molecular test	459	12,812
<i>Positive specimens by type</i>		
Influenza A	312 (54%)	13,433 (83%)
Influenza B	268 (46%)	2,757 (17%)

Total Reported Positive Influenza Tests – Maine, 2024-25

Antigenic Characterization (Vaccine Strain Match)

US CDC characterizes antigenicity by how well antibodies made against the vaccine strains recognize circulating virus that have been grown in cell culture. Of the characterized viruses, the vaccine strain antibodies recognized:

- 99.3% of influenza A/H1N1 viruses were well-recognized by ferret antisera raised against the cell-grown A/Wisconsin/67/2022-like reference virus for the season
- 58.2% of influenza A/H3N2) viruses were well-recognized by ferret antisera raised against the cell-grown A/Massachusetts/18/2022-like reference virus for the season.
- 100% of influenza B/Victoria lineage viruses were well-recognized by ferret antisera raised against the cell-grown B/Austria/1359417/2021-like reference virus.
- No influenza B/Yamagata samples were available for characterization

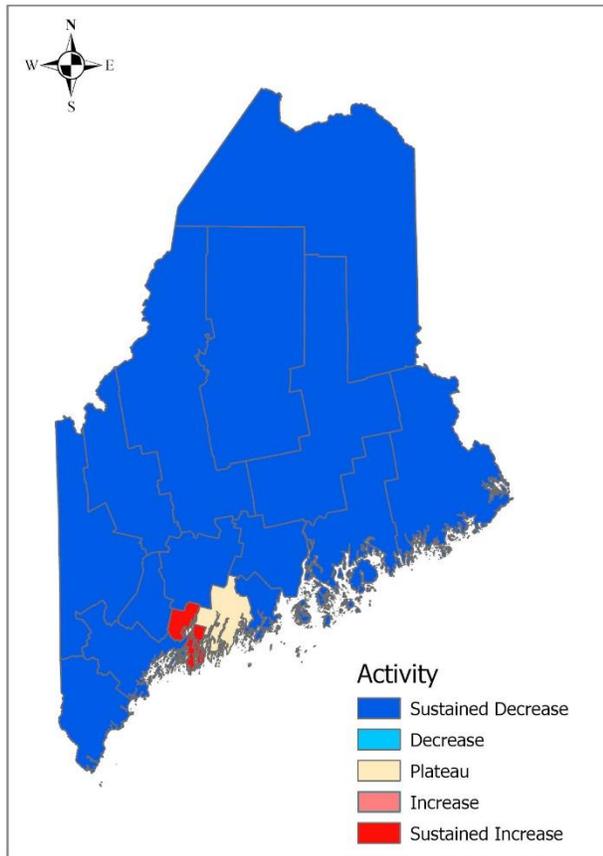

Weekly County-level Influenza, Maine, Week 13

County	Positive labs	Hospitalizations	Activity Trend	Severity Estimate [§]
Androscoggin	43	3	Sustained Decrease	Low
Aroostook	53	1	Sustained Decrease	Moderate
Cumberland	89	7	Sustained Decrease	Low
Franklin	9	0	Sustained Decrease	Low
Hancock	20	2	Sustained Decrease	Low
Kennebec	38	1	Sustained Decrease	Low
Knox	18	1	Sustained Decrease	Low
Lincoln	11	2	Plateau	Moderate
Oxford	45	6	Sustained Decrease	Moderate
Penobscot	55	2	Sustained Decrease	Low
Piscataquis	1	0	Sustained Decrease	Low
Sagadahoc	15	0	Sustained Increase	Low
Somerset	26	4	Sustained Decrease	Low
Waldo	11	0	Sustained Decrease	Low
Washington	11	1	Sustained Decrease	Low
York	135	6	Sustained Decrease	Low
Total	580	36	-	-

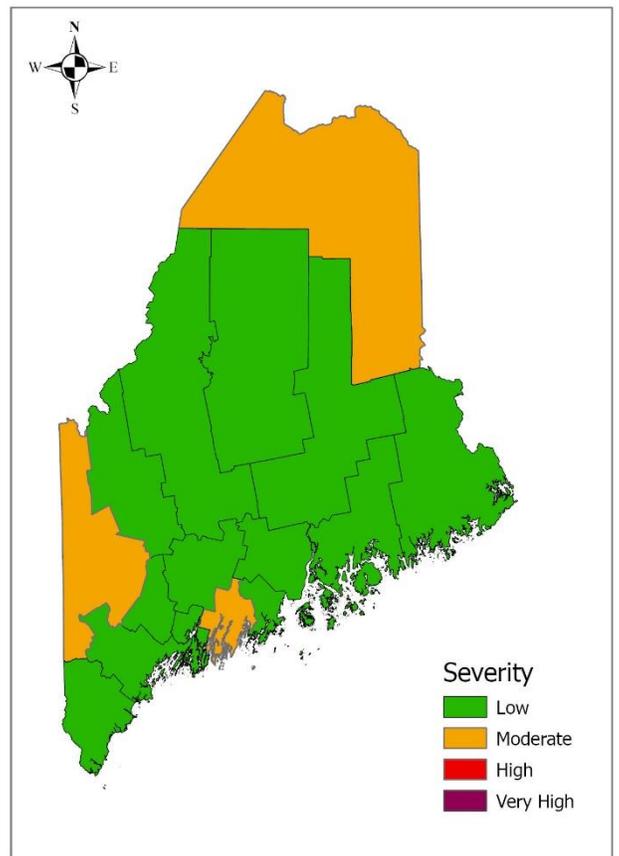

*Activity trends are determined by county-level emergency department visits due to ILI. Activity trend levels include “sustained increase”, “increase”, “plateau”, “decrease”, and “sustained decrease.” This will become available when enough weeks of data have been collected.

[§]Severity is estimated using county-level P&I deaths, syndromic surveillance, and hospitalizations. Thresholds are calculated statewide from previous seasons’ data using the moving epidemic method, as described at <https://www.cdc.gov/flu/about/classifies-flu-severity.htm>

Influenza Activity Trends, Maine, Week 13

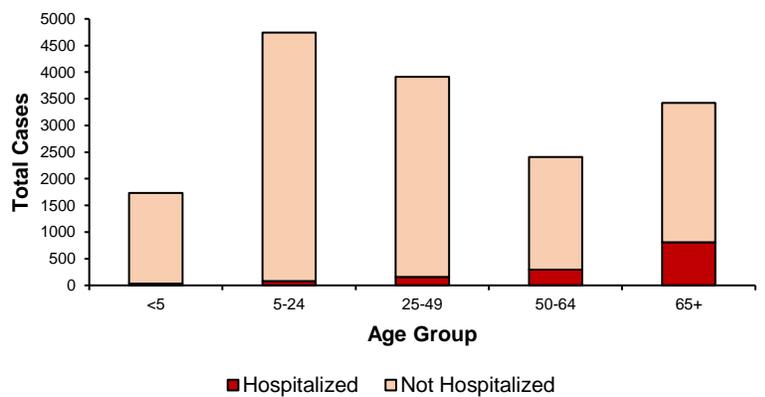

Influenza Severity Estimates, Maine, Week 13

Age Information – Maine, 2024-25 Influenza Season

	Age (years)		
	Min.	Mean	Max
Cases	< 1	38	104
Hospitalizations	<1	64	103
Deaths	<18	77	103

Positive Influenza Tests by Age and Hospitalization Status – Maine, 2024-25

Influenza-Like Illness Outbreaks – Maine, 2024-25 Influenza Season

Number of New Outbreak Investigations
0

Total Outbreaks This Season
146

Outbreak Facility Type Key:

LTC - Long Term Care Facility

AC - Acute Care Facility (nosocomial)

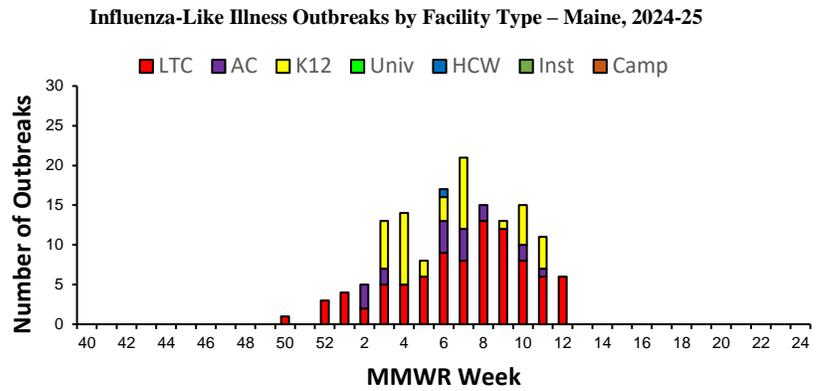

K12 - School (K-12) or daycare

Univ - School (residential) or University

HCW - Health care workers

Inst - Other institutions (workplaces, correctional facilities etc)

Camp - Camp

Influenza-Like Illness Outbreak by Facility Type and County – Maine, 2024-25

County	LTC	AC	K12	Univ	HCW	Inst	Camp	Total
Androscoggin	6	3	1					10
Aroostook	8	1	4					13
Cumberland	31	4	2		1			38
Franklin		2						2
Hancock	3	1	3					7
Kennebec	5	1	8					14
Knox	1	1	3					5
Lincoln	3							3
Oxford	4		5					9
Penobscot	8	2						10
Piscataquis								0
Sagadahoc	2		1					3
Somerset	1		4					5
Waldo	1		2					3
Washington			5					5
York	15	3	1		1	0	0	19
Total	88	18	39	0	1	0	0	146

A Weekly Influenza Surveillance Report Prepared by the Influenza Division

Outpatient Respiratory Illness Activity Map Determined by Data Reported to ILINet

This system monitors visits for respiratory illness that includes fever plus a cough or sore throat, also referred to as ILI, not laboratory confirmed influenza and may capture patient visits due to other respiratory pathogens that cause similar symptoms.

2024-25 Influenza Season Week 12 ending Mar 22, 2025

*This map uses the proportion of outpatient visits to healthcare providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.

*Data collected in ILINet may disproportionately represent certain populations within a state, and therefore may not accurately depict the full picture of influenza activity for the whole state.

*Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map are based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data is received.

*Differences in the data presented by CDC and state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.

*For the data download you can use Activity Level for the number and Activity Level Label for the text description.

*This graphic notice means that you are leaving an HHS Web site.

For more information, please see CDC's Exit Notification and Disclaimer policy.

For more information on the methodology, please visit Outpatient Illness Surveillance methods section.
