Oral health is an important component of MaineCare’s Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) program. In an effort to ensure that young children receive the oral health care they need, MaineCare now allows medical providers to bill D0145 (oral evaluation for children under 3 years) with D1206 (fluoride varnish application).

**Oral Evaluation for Children Under 3 Years:** What constitutes an oral evaluation billable by medical providers to MaineCare using D0145?

The oral evaluation conducted by a medical provider must comprise all of the following four components and must be documented in the patient’s record, according to each practice’s policy:

1. **Question about the existence of a current primary dentist/dental home.**
2. **Risk screening questions based on oral health history.**
3. **Risk assessment of mouth and teeth.**
4. **Oral health plan.**

Based on this oral evaluation, the presence of one or more risk factors (including lack of dental home) constitutes a moderate/high risk for early childhood caries.

1) The medical provider is required to ask if the child has seen a dentist in the past year to determine if the child has a primary dentist/dental home. If the child has seen a dentist in the past year and/or has a dental home, the provider should not submit a claim to MaineCare for the oral evaluation (D0145).

2) **Federally Qualified Health Centers, Rural Health Centers, and Indian Health Services are to use these codes for encounter purposes; reimbursement for the visit will continue to be paid at the core rate for the practice.**

3) A third fluoride varnish application is allowed during the calendar year if the member has a) a high rate of caries or b) new restorations placed in the previous eighteen (18) months. Children older than 3 years of age may receive fluoride varnish by an eligible medical provider twice in a calendar year with at least 150 days between applications.

The payment rates for these services can be found in the MaineCare Provider Fee Schedule at:
