Table A

Project Description

Table A describes in detail the Improving Health Outcomes for Children (IHOC) project as a whole, how Maine and Vermont intend to address each category selected in our application, how the work performed under each category will complement the efforts undertaken in other categories, and how activities conducted across all categories will contribute to the overall improvement of children’s health care under Medicaid and CHIP, and how the operational plan has changed since the grant application was submitted.

<tr>
<td>Provide a succinct description of the proposed project.</td>
<td>Maine and Vermont’s CHIPRA Quality Demonstration Grant “Improving Health Outcomes for Children” (IHOC) will enhance the quality of care delivered to children in their states and inform best practices for the nation, particularly rural areas. Building on existing health quality infrastructures, MaineCare and the Department of Vermont Health Access (Maine and Vermont’s Medicaid/CHIP agencies) propose activities under Grant Categories A (Maine only), B, C and E (Vermont only) to collect and report on the use of evidence-based child health quality measures; expand HIT to improve the flow of child health data; enhance payment reform; support and evaluate pediatric-focused medical home models and promote a collaborative learning environment that can be a national model for other states. For Category A, Maine proposes to enhance the state’s current quality performance measurement and incentive payment systems to include the core child health quality indicators and other identified measures, with the goal of reducing unnecessary variation in pediatric care, aligning payment and financial incentives with pediatric quality measures, and improving the health of low-income and other children in Maine. To achieve this, CHIPRA quality measures and strategies for incentivizing child health quality will be integrated into risk-based managed care contracts that are expected to be in place in January 2012. The MaineCare program currently operates on a fee-for-service basis, and pays qualifying primary care providers a small fee to manage MaineCare members’ care through the Primary Care Case Management program. MaineCare is in the process of developing an RFP for release in the Spring 2011 for Medicaid managed care plans to manage the MaineCare program beginning in 2012. The state is currently planning for this transition, developing quality standards, measures and payment incentives for the managed care plans to be included in the RFP and eventually in the managed care contracts. The proposed quality incentive payments for plans, while still being vetted, include several CHIPRA measures, primarily those that are NCQA HEDIS measures. A final set of measures and payment incentives for MaineCare managed care plans is expected to be released in February 2011. Managed care plans will also be required to participate in all existing MaineCare quality initiatives including both ME’s Improving Health Outcomes for Children (IHOC) CHIPRA grant and the Maine Patient Centered Medical Home (PCMH) Pilot. The Maine PCMH Pilot was formed prior to the CHIPRA Demonstration Grant when several organizations in Maine came together to develop a Maine Patient Centered Medical Home Pilot. The PCMH Pilot is partnering with IHOC and has already agreed to include many CHIPRA measures in its outcome and process measures for</td>

Maine 1-14-2011
the pediatric medical home practices.

In Category B, both states propose to enhance their HIT infrastructures to improve the flow and use of child health quality information—Vermont by expanding the Vermont Blueprint for Health HIT infrastructure to support guideline-based care and performance measurement in pediatric populations and Maine by automating EPSDT data collection and sharing comprehensive health assessments with health care providers and case managers of children in foster care. For Category C, Maine and Vermont will assess and support pediatric practices in operating as patient-centered medical homes in their respective states. Maine will also pilot learning initiatives in the Pediatric PCMH Pilot sites and other pediatric practice settings including the implementation of the current pediatric care guidelines—the Bright Futures Guidelines for Health Supervision of Infants, Children, and Adolescents, Third Edition. They will also increase provider education on child health outcomes. Finally, under Grant Category E, Vermont will build upon its leadership role as convener of the National Improvement Partnership Network to increase the number of participating states (particularly non-Demonstration states), expanding the reach of CMS’s child health improvement efforts. As part of its sustainability plan, Maine will be one of the states working with Vermont to establish a child health Improvement Partnership program.

The proposed activities capitalize on each state’s unique strengths in ways that support shared learning, and increase opportunities for actualizing the objectives. Maine’s expertise in Medicaid quality measurement and pay-for-performance, including recent experience developing patient-centered medical homes that involve both pediatric and family practices, will inform Vermont efforts to extend their state health reform initiative, the Vermont Blueprint for Health, to children. Similarly, Maine’s plans to adopt Bright Futures practice standards, increase provider participation in quality improvement activities and create a child health Improvement Partnership will benefit from Vermont’s role in developing the Bright Futures guidelines and toolkit, and its leadership in promoting and sustaining quality Improvement Partnerships in Vermont and nationally.
What are the principal objectives of the demonstration, including expected outcomes and products?

Maine’s principal objectives for **Category A** are to:

- Engage stakeholders—including pediatric healthcare providers, professional organizations, health systems, child and family advocates, public and private payers, and quality improvement organizations—for the purpose of providing feedback on the development, implementation and use of pediatric measures for quality improvement throughout the demonstration.

- Collect and evaluate the CHIPRA initial core measures and additional pediatric quality measures identified by stakeholders. Report results to payers, providers, consumers and CMS, and identify barriers and solutions to implementation. Quality measures will be available that can be used for payment incentives by payers, for quality improvement activities by practices, and for assisting consumers in selecting quality providers. Maine will use a phased-in approach to collect and report the CHIPRA measures. In 2011, Maine will add approximately 14 claims-based CHIPRA measures to its existing MaineCare utilization review and payment incentive reports to providers, and modify its annual patient experience of care survey to meet the CHIPRA measure requirement. Beginning in 2011 and continuing into 2012, the second phase will focus on collecting and reporting measures drawn from data sources that currently do not identify Medicaid patients and will need to be linked to Medicaid eligibility data, including measures from immunization registries, birth certificate registries, and hospital discharge data. Using all of these data sources, Maine will be able to report on approximately 22 CHIPRA measures. The final phase, to begin in 2013, will use data from a new automated EPSDT registry system developed through activities in Category B of the demonstration (see below), to collect and report on process of care measures. Reporting of the available CHIPRA measures will occur at least annually beginning in 2012.

- Refine MaineCare’s pay-for-performance program under its new managed care system to provide greater incentive for child health quality improvement. Maine is in the planning phase for its move to managed care expected to begin in 2012. During the planning stage, which is expected to end in the spring of 2011 with the release of the managed care RFP, the state is defining quality standards for plans as well as performance measurement requirements and incentive payments that will include CHIPRA measures. Quality standards will include a requirement that MaineCare managed care plans participate in existing MaineCare quality initiatives including both the IHOC CHIPRA demonstration grant and the Maine PCMH Pilot incentive payments. The list of performance measures and payment incentives for managed care including many CHIPRA measures will be completed in February 2011 for inclusion in the RFP. They will also be included in the final contracts with selected plans expected to commence in 2012.

- Align pediatric quality measures selected by the demonstration with quality measurement activities of other payers, professional organizations, and with MaineCare payment incentives. By maximizing the overlap of measures required by different payers, the demonstration will minimize the administrative burden of collection for providers and facilitate broad adoption of the measures across the State.

- Beginning in 2012, with input from the pediatric and mental health community, identify and review the feasibility of collecting evidence-based child behavioral health measures, building on the National
Outcomes Measures supported by the Substance Abuse and Mental Health Services Administration (SAMHSA).

- For Category B, Maine’s principal objectives are to:
  - Design, develop and implement HIT linkages and systems within the Maine Department of Health and Human Services and with pediatric practices and health systems to collect and report EPSDT/Bright Futures preventive measures and other clinical data from the clinical record. Maine will pilot HIT linkages and systems with the four pediatric practices participating in the PCMH Pilot project. Each pediatric practice belongs to a different health system in Maine, and are located in different regions in the state. Expansion to additional practices serving children will occur as we obtain success and negotiate specifics to move forward.
  - Design, implement and evaluate an electronic health assessment for children in Maine’s foster care system.

Vermont’s principal objectives are to:

- Expand (build) the *Vermont Blueprint for Health* central registry (DocSite) to include data elements and performance measures for the 4 areas of pediatric care for which guidelines exist (i.e. preventive services, asthma, ADHD, obesity) in order to support guideline-based care, performance measurement, population management, and coordination with community-based services for the pediatric population. Development of the central registry will include expanding its flexible web-based reporting platform to drive improvements in care delivery and guide state health reform.
  - Support use of DocSite in pediatric and family practices participating in the Blueprint by deploying up to 2 pediatric practice facilitators to work with practice teams on effective use of the central registry.
  - Support interface development for guideline-based data elements between DocSite and commercial EHRs to support data feeds for pediatric providers participating in the Blueprint who use an EHR. Interfaces will be developed for the EHR products being used by pediatric/family practices joining the Blueprint. The full list of products currently in use or that will be used by participating pediatric/family practices is unknown at this time. In terms of which products practices may purchase, the Vermont Information Technology Leaders (VITL) has established a preferred EHR vendor listing for Vermont practices. This designation indicates that the vendor 1) meets all interoperability specifications of the Vermont Health Information Exchange (HIE); 2) includes in the product’s base price all interfaces necessary for practices to connect to the exchange; and 3) agrees to discounted prices for practices in the state and to standard contracts. VITL’s preferred EHR vendors include AllscriptsTM; Fletcher Allen Health Care’s (Burlington, VT) PRISM (Patient Record and Information Systems Management), which is based on technology from Epic Systems Corporation; athenahealth; and PrimeSuite 2008 (a Greenway Medical Technologies, Inc. product). Practices have the option of purchasing a product from the list of preferred vendors, though it is not a requirement for participation in the Blueprint.
Following a similar process that the Blueprint has employed to date, Blueprint leadership, VITL, DocSite, and UVM/VCHIP will approach the development of interfaces on a case-by-case (that is, practice-by-practice) basis, as the scope and complexity of this work is highly variable across vendors and products. Under CHIPRA, UVM/VCHIP pediatric clinical faculty will provide clinical interpretation of data fields in a given EHR in use to determine which fields require modification, or which new fields must be created, so that data fields in the EHR map onto those in the DocSite central registry that are used to calculate performance measures. Based on these assessments, clinical faculty will provide a set of recommendations to the Blueprint indicating modifications (i.e. changes to existing data fields or the development of new fields) that would need to be made to the EHR to enable data feeds to the DocSite central registry. The Blueprint will then work with VITL, DocSite, the practice, and/or the practice’s EHR vendor to modify the EHR product, where feasible.

For Category C, Maine’s principal objectives are to:
- Implement the Bright Futures Resource Toolkit with Maine child health providers and assess the impact on the provision of EPSDT services in Maine.
- Develop and implement “Learning Community” activities with the PCMH Pilot and other practices to enhance practice-level capacity for child health quality improvement and to evaluate the impact on quality.
- Build a child health quality improvement partnership in Maine that will be sustained after the grant ends.

Vermont’s principal objectives are to:
- Extend the Blueprint for Health integrated health model (or “Advanced Primary Care Practice (APCP) model”) in Vermont’s pediatric population by deploying up to 2 NCQA scorers to conduct NCQA assessments in pediatric/family practices joining the Blueprint and by deploying pediatric practice facilitators (up to 2, as stated above) to work with practice teams on quality improvement.
- Design and conduct a pediatric-specific evaluation to assess impact of the APCP model on care delivery, health status, and healthcare costs.

Maine and Vermont will also jointly design and implement a comparative cross-site evaluation of the implementation and impact of Maine and Vermont’s child health quality improvement strategies using the pediatric PCMH/APCP model.

Under Category E, Vermont’s principal objectives are to:
- Continue to support the national network of 15 Improvement Partnership states (National Improvement Partnership Network, or NIPN) through the provision of technical assistance.
- Assist an additional 20 states in development of a sustainable state Improvement Partnership to focus on the priorities of this demonstration, particularly those not receiving Federal funding under the grant and smaller, rural states. Specifically, Vermont will provide technical assistance to 5 states per year for years 2 through 5 of the demonstration grant. Among the states that will receive technical assistance to build a child health Improvement Partnership is the state of Maine. This will increase the number of states with an existing or
Explain the role of each State participating in the demonstration (if the project involves multiple States).

As partners, Maine and Vermont will consult, collaborate, and share information throughout the grant period, thereby benefiting from each state’s experiences, and expertise.

For example:

1. While Vermont will not be implementing the core measures, through regular cross-state meetings and communication with Maine, Vermont will keep abreast of Maine’s experience and assess meaningfulness of the measures among Blueprint constituents (e.g., providers, state government, Vermont legislature) and the feasibility of collecting some measures under the Blueprint. Through its partnership with Maine and by following the experience in other states, Vermont hopes to assess the utility and value of these performance measures across Medicaid/CHIP fee-for-service and managed care delivery systems and to benchmark with other states, regional and national rates.

2. Both Maine and Vermont are in the process of defining and automating Bright Futures measures. Communication, consultation and sharing of information across states will occur regularly through identified point persons in each state.

3. Both Maine and Vermont are promoting the use of HIT to include child health measures. Each state has unique health data systems and health policies that impact the development of HIT capacity. Maine and Vermont will capitalize on each state’s unique proficiencies in ways that support shared learning, and increase opportunities for actualizing the objectives. Both states will communicate and share best practices on the automation of Bright Futures in different but parallel HIT systems.

Maine and Vermont intend to use the IHOC Executive Committee meetings to share common issues and problems encountered around child health quality measurement and pediatric improvement both for the specific activities of this grant and to align pediatric initiatives currently taking place or that arise over the course of the grant across the two states.

Maine and Vermont are also jointly developing a cross-state comparative evaluation plan of the implementation and impact of ME and VT’s child health quality improvement strategies, using the pediatric PCMH model. The evaluation team will use a team approach to develop and implement the evaluation plan.

Another example of collaboration with distinct roles pertains to Category E: Create a Model Targeting Health Care, Delivery, Coordination, Quality, or Access. Vermont plans to expand the National Improvement Partnership Network (NIPN) as part of Category E. Maine is one of the states intending to develop an Improvement Partnership and will benefit from Vermont’s expertise in this area.

Briefly summarize the activities planned...
Maine will use Category A funds to enhance the state’s current quality performance measurement and incentive payment systems by developing and implementing a set of pediatric quality measures that includes the core child health quality indicators under development by CMS and Agency for Healthcare Research and Quality (AHRQ), and additional measures identified by IHOC stakeholders. As many of the draft core measures require clinical data versus claims, this work will be integrally tied to work proposed under Category B to automate EPSDT Bright Futures reporting and data warehousing. As described in Category C, core and other measures will be integrated into metrics used by the pediatric practices participating in the Maine PCMH Pilot, to inform their quality improvement and practice transformation efforts. Maine envisions that by expanding the list of measures collected, aligning them with federal standards, and facilitating their use by MaineCare and other payers, providers, and consumers, it will reduce unnecessary variation in pediatric care and improve the health of low-income and other children in Maine.

By working collaboratively with existing quality initiatives in both the public and private sectors we seek to incorporate these quality measures (once collection has proven to be feasible) to inform quality improvement of pediatric care across all payers. Our goals are that, by the end of the five-year demonstration, MaineCare and other payers will include more child-related evidence-based quality measures in their payment methods, there will be timely and actionable quality performance feedback to medical providers serving children to inform practice-level quality improvement, and transparency and consumer choice will be increased by making these quality measures publicly available through the MaineCare program, the Department of Health & Human Services web-based reporting platform, and other statewide quality improvement efforts. Through our partnership with Vermont, we will inform Vermont’s and national efforts to replicate the adoption of the core measures in states that are both currently using quality metrics for payment and states that have not yet developed such systems. By Years 4 and 5, Vermont will review Maine’s work in collecting and reporting on the initial core measures set and determine the feasibility and utility of collecting the data necessary to capture some core measures through the Blueprint for Health central registry (DocSite).

In addition to aligning the clinical quality measures (CQMs) across IHOC and the Maine PCMH Pilot with the CMS EHR Incentive program’s “meaningful use” measures, we also have agreement from key stakeholders that we need to identify a common system for collecting these CQMs from providers, ideally capturing them directly from certified EHR systems so that the data collection is embedded in existing provider workflows. While we have not fully identified this data collection system as yet, we anticipate that IHOC quality data will be collected through Maine’s designated health information exchange and managed through an integrated system for multiple purposes, including those of our IHOC development activities, MaineCare’s management of meaningful use, and statewide collection and management of quality data. Through our work in Maine IHOC and the related PCMH Pilot, we plan to continue these discussions and anticipate identifying a viable system for this data collection within the next 12-18 months.
We look forward to working with the Centers for Excellence sites in identifying behavioral health measures that Maine may pilot collection of within selected providers.

- Category B (Health Information Technology)

Maine and Vermont propose to advance a shared mission to expand the use of the states’ health information technology (HIT) and health information exchange (HIE) capacity and resources to promote child health quality improvement and the health of their children. Both Maine and Vermont are working toward a vision of a fully implemented HIT system that provides evidence-based, real-time data on quality measures to clinicians, state agencies, social service providers, and policy makers so that prevention and treatment resources are efficiently deployed in ways that produce measurable improvement in child health and well-being. Each state will tailor its approach to its unique environment with Maine using a phased-in approach to work towards a fully implemented HIT system. Both states envision sharing with other states, particularly those with substantial rural populations, their experience and lessons learned about the challenges and best practices of HIT/HIE development and deployment for child health care quality improvement. To this end, Maine and Vermont each propose objectives to enhance their HIT infrastructures in ways that complement current and proposed HIT initiatives (e.g., ARRA HIT grants) and that will improve the flow and use of child health quality information. In Vermont, this involves expanding the current state HIT infrastructure to support the expansion of the Blueprint for Health to pediatric populations. Maine will augment its HIT systems to document children’s use of preventive services, and increase early identification and treatment of developmental issues. Additionally, Maine will pilot the automation of a comprehensive health assessment for children in foster care, and track outcomes with the goal of expanding for all children in foster care and other high-risk populations.

The Maine HIT/HIE planning efforts have included detailed surveys of Maine’s hospital and physician community.

The Maine IHOC initiative is focusing its initial health care delivery system improvement efforts on the four pediatric practices in Maine’s PCMH Pilot. Baseline information is available on those practices sites including information on their current HIT status – i.e. we know that all four sites have fully implemented EHRs, 2 using GE Healthcare Centricity, and the others using AllScripts/Touchworks and EPIC Systems EpicCare. None have yet demonstrated meaningful use within the CMS EHR Incentive Program, but three sites are part of larger health systems (Eastern Maine, Maine General, and Maine Health) and one is a federally qualified health center. The health systems are all actively working with the Maine Regional Extension Center to demonstrate meaningful use, and expect to do so by the end of CY 2011. Later this year, we will additionally be working with additional primary care practices as part of our efforts to improve EPSDT screening through use of AAP Bright Futures. More detailed analysis and development of the necessary capacity for Bright Futures data collection from those EMR’s building off data collected in the state’s HIT survey will be performed early in 2011.

In Vermont the Blueprint for Health will be expanding into every Hospital Service Area (HSA) with at least two practice sites by July 2011, and will include any willing practice by October 2013. Practice participation in the Blueprint is voluntary. Assignment of a practice facilitator and NCQA assessments are coordinated in each local HSA with Blueprint staff. As a result specific practices had not been targeted for a pilot. The Blueprint has
Maine’s Indian tribal health systems are being targeted as part of Maine’s overall HIT/HIE planning and they are active participants, and represented, on the state HIT Steering Committee. MaineCare includes the Health Directors from the 5 tribal health systems in all MaineCare stakeholder groups. We will follow up with them to ensure their participation with IHOC and request their participation on the IHOC State Coordinating.

Vermont has no federally recognized Indian tribes.

Maine’s HIT/HIE development efforts are tightly coordinated with its IHOC grant-funded activities. MaineCare’s Deputy Medical Director serves on the IHOC project and as chief liaison between Maine’s Medicaid Agency and its HIT/HIE planning and implementation effort, the overall state HIT/HIE coordination effort, and HealthInfoNet, which serves both as Maine’s single Regional Extension Center and governor-designated statewide health information exchange. Maine’s Office of the State Coordinator for HIT is an active member of the IHOC Statewide Coordinating Committee and the IHOC HIT Subcommittee and also works closely with IHOC to ensure coordination, non-duplication, and synergy with all HIT/HIE efforts in Maine.

Currently the State of Maine has a Strategic and Operational Plan for HIE that has been approved by the Office of the National Coordinator for HIT. Within it the State of Maine includes the current adoption of HIT by all providers – Acute, Ambulatory, and others including Indian Health Services. The state has a relatively high adoption rate of EMR. EMR penetration in Maine includes:

- 71% of Large hospitals
- 62% of medium hospitals
- 58% of small hospitals
- 74% of FQHCs
- 100% of Indian Health Centers
- 50% of ambulatory primary care practices

The State Medicaid Health Plan has been drafted with feedback from the Office of the State Coordinator for HIT and HealthInfoNet. The CHIPRA activities for Maine will be included in the upcoming HIE planning activities discussed above to assure that there is synergy and funds are being allocated appropriately.

The IHOC is also leveraging the statewide HIE – HealthInfoNet – to support its efforts. HealthInfoNet is currently exchanging data with 15 of Maine’s 39 hospitals, and a number of ambulatory practices. In 2011, HealthInfoNet is connecting fourteen additional hospitals and a number of ambulatory practices to support the exchange of clinical summary records and other critical health information such as medication and laboratory results. The IHOC will leverage the interfaces developed by HealthInfoNet with target practices to expand the data set exchanged by the HIE to include EPSDT data. This way funds can be maximized to develop a solution.
that meets immediate pilot interests but also statewide deployment and sustainability.

Vermont’s Medicaid EHR Incentive Program (EHRIP) is currently being planned in the context of our SMHP (State Medicaid HIT Plan). Development of the EHRIP is taking into consideration the Blueprint for Health expansion including the CHIPRA efforts focused on pediatric practices. The REC is actively involved in the development of the SMHP, the EHRIP, and activities with Blueprint for Health.

| Category C (Provider-Based Models) | Through expansions of their PCMH models in this demonstration, Maine and Vermont will advance their shared mission to act as catalysts for practice and health system transformation to high-quality, well-coordinated, and financially sustainable health systems. Vermont will extend the patient-centered medical home and practice facilitation components of the Blueprint for Health Advanced Primary Care Practice model (APCP) to the pediatric population. Maine will work with the four pediatric practices in its PCMH Pilot as well as other high-MaineCare volume pediatric practices in the state to provide pediatric-specific learning initiatives to create network for quality improvement, disseminate pediatric practice standards and foster collaborative learning and practice transformation around child health quality improvement goals. Both states will also evaluate the impact of PCMH implementation in the pediatric population. |
| Category D (Pediatric Electronic Health Record) | Not selected by this grantee. |
| Category E (CMS Priorities) | Vermont proposes to pursue Category E to assist an additional 20 states (preferably non-CHIPRA Demonstration states and rural states, and in particular Maine as the lead on this grant) in developing a sustainable state Improvement Partnership (IP) to focus on the priorities of this demonstration and to evaluate the IP model as a replicable, sustainable vehicle to effect measurable improvements in the quality of children’s healthcare. An Improvement Partnership is defined as a durable state or regional collaborative of public and private partners from across the healthcare system that uses the science of quality improvement and a systems approach to improve healthcare infrastructure and practice. This Category is intended to serve all states. The proposed IP model and national network of IP states, the National Improvement Partnership Network (NIPN), are designed to support within and cross-state collaboration, respectively; accelerate translation of evidence-based strategies to children’s healthcare delivery; and provide an innovative approach to test, share, and learn about strategies to reduce redundancies and costs in the Medicaid program while improving access and quality of health care for children. Vermont’s experience to date with IPs indicates that states with an IP program will have improved delivery, access, and quality healthcare outcomes for children and families. |

How will the activities associated with these categories be integrated?

The activities under Category A, B and C in Maine and B, C, and E in Vermont are closely integrated in that they all are contributing toward both states’ overall goal of improving pediatric clinical practice in different settings that serve children.

Maine conceptualizes the grant categories as component strategies for achieving practice improvement statewide to improve children’s health. For example, work proposed under Category A is shown under the strategies of standardizing pediatric quality measures and making these measures available to providers and the public. Together these strategies are expected to raise awareness about the variability in quality of care statewide, provide baseline expectations, and help inform areas to prioritize for quality improvement and learning session
topic selection proposed under Category C. Likewise, many of the measures require clinical data not currently available. Thus automating the collection of this data is necessary to produce the measures themselves. The hope is to reduce unnecessary administrative burden and duplicate entry thereby freeing up time available for clinical care. Finally, we plan on piloting the automation of EPSDT and learning activities in both official PCMH Pilot sites and in other practices working toward medical homes, in order to compare the impact of these projects at different stages of medical home readiness.

In Vermont, the inclusion of Bright Futures and other pediatric care guidelines (i.e., asthma, ADHD, and obesity) in the DocSite central registry under Category B will enable pediatric and family practices participating in the Blueprint to track their progress on performance measures over time. Once operational, Blueprint pediatric practice facilitators (Category C) will produce performance reports in DocSite to: 1) assess practices’ improvements over time; 2) compare performance across practices within a given hospital service area and across Vermont; and 3) identify areas of focus for quality improvement (QI) activities within each practice. Moreover, a feedback loop will exist between Vermont’s Category B and C work so that not only will data coming from DocSite be used to drive QI in practices, but data needs identified in QI efforts (e.g. PDSA cycles) may necessitate addition or modification of data elements and performance measures in DocSite over time. “Separate” activities within a given category will also be integrated. More specifically, pediatric practice facilitators will work with NCQA scorers and use the results of NCQA assessments to help practices improve their level of medical home-ness (Category C). In Category E, Vermont will draw from UVM/VCHIP’s experience supporting practices in NCQA recognition, as well as its extensive history of conducting QI in practices, and more recently administering Maintenance of Certification (MOC)-approved QI projects, to help inform the National Improvement Partnership Network’s strategic priorities.

<table>
<thead>
<tr>
<th>What are the expected benefits of integrating these activities in the manner described?</th>
<th>Some of the benefits of integrating the activities are described above in terms of maximizing resources and strategies to achieve the ultimate goal of pediatric practice improvement. In Maine an added benefit of integrating the various activities is that it addresses concerns by providers that this is a separate MaineCare initiative that is occurring on a parallel track with other quality initiatives in which providers are participating in the state. Developing automated data collection, standardizing quality measures, and practice improvement together and aligning these activities with initiatives across health systems in the state will facilitate provider participation. In Vermont, CHIPRA demonstration grant categories align closely with the key components of the Blueprint, allowing Vermont the opportunity to build off of its existing, multi-pronged health reform framework and more rapidly expand the initiative statewide. By building off existing quality structures and working to integrate the project with existing information technology projects currently underway, both Maine and Vermont will provide a more seamless set of resources to providers to support the delivery of quality care while maximizing availability of funds.</th>
</tr>
</thead>
<tbody>
<tr>
<td>In what general ways has the operational plan changed from the original version submitted with the grantee’s application?</td>
<td>While we have added more details to the operational plan and accommodated some changes in the environment in both states, the basic components of the original plan have not changed substantially. Both states still intend to implement work in each of the categories for which they originally applied. The specifics of the plans, however, have been modified somewhat to accommodate for policy changes in both states that have occurred since the application was submitted.</td>
</tr>
</tbody>
</table>
For example, the 2010 legislative session in Vermont marked major changes to the state’s health reform initiative, the Vermont Blueprint for Health. Vermont Act 128 of 2010 amends previous legislation, defining the Blueprint for Health as a “program for integrating a system of health care for patients, improving the health of the overall population, and improving control over health care costs by promoting maintenance, prevention, and care coordination and management.” This change effectively expands the Blueprint Integrated Pilot covering approximately 10% of the state’s population to all Vermont residents. Key benchmarks articulated in the new legislation include:

- By January 1, 2011, health insurers are required to participate in the Blueprint for Health as a condition of doing business in the state;
- By July 1, 2011 the Blueprint must include at least two primary care practices in each of Vermont’s 13 hospital service areas (HSAs); and
- By October 1, 2013, expansions must include all willing primary care practices statewide.

Originally intended to pilot the Blueprint in the state’s pediatric population, Vermont’s CHIPRA demonstration funding will be used to support the initiative’s expansion to pediatric and family practices serving children statewide. Tasks identified in Tables D and E of this Final Operational Plan reflect the same work that was proposed in the original grant application with slight variances. More specifically, Vermont’s original Objective 1 in Category C, to work with the Blueprint to adapt the Blueprint financial impact model to the pediatric population, and to negotiate multi-payer payment reform to support pediatric patient-centered medical homes and expansion of community health teams to support children’s services, has been accomplished in part through the work of the Blueprint for Health leadership and the Vermont House Health Care Committee. As defined above, multi-payer payment reforms are in effect statewide January 1, 2011. Moreover, the Blueprint financial impact model has been fully constructed to assess care delivery and costs for all Vermont residents and is currently being populated by the state’s multi-payer claims database, VHCURES. With the deletion of this objective, Vermont’s Category C activities have broadened to include an additional piece of the Blueprint expansion, the deployment of practice facilitators to support patient-centered medical home implementation and quality improvement in pediatric and family practices. The final variance represented in Tables D and E is that activities have been set against a more aggressive timeline than originally proposed, reflecting the current expansion goals for the Blueprint.

In Maine, a major change that has occurred in the state is that the legislature approved a plan to implement risk-based managed care contracts in the MaineCare program. This has operational implications for Maine’s original proposal in that some quality functions currently managed by the Office of MaineCare Services in its Primary Care Case Management program including pay-for-performance incentive payments to providers may be subsumed under the managed care organizations’ responsibilities. Several members of the CHIPRA steering committee are on the planning committees for the managed care transition and will ensure that the MCOs that the state subcontracts with will be required to provide the data and measures required under CHIPRA Category A and any other measures identified through our planning process as being important for pediatric quality improvement. CHIPRA staff and/or members of the Steering Committee will also participate in the Finance and Operations subcommittees to ensure that requirements of managed care contracts include performance incentives for providers, including participants in the state’s PCMH Pilot who will be receiving additional supports under
this grant.

During the nine month planning period Maine also has modified its stakeholder engagement plan, redefining its subcommittee structure and membership to maximize participation and the use of participants’ time. Initially, Maine proposed convening a Pediatric Quality Council, a Measures & Reporting Subcommittee, a Practice Improvement Subcommittee and an annual Child Health Summit. In the process of convening stakeholders, we discovered that many of the stakeholders of the Pediatric Quality Council, the Measures and Reporting Subcommittee and the Practice Improvement Subcommittee were the same people. There is a large overlap in the pediatric healthcare providers and health systems interested in collecting and reporting results on pediatric measures, and those working on integrating health information technology and quality improvement initiatives. Therefore, we combined the Pediatric Quality Council, the Measures & Reporting Subcommittee and the Practice Improvement Subcommittee into one subcommittee: Measures and Practice Improvement (MPI).

Since committee time is limited and to ensure provider involvement and engagement in the development of measures and learning initiatives Maine has also contracted with pediatricians to advise and assist CHIPRA project staff in identifying Bright Future measures to be collected, provide recommendations to the MPI Subcommittee, and support the PCMH Pilot in adopting core measures.

Also based on feedback from providers, rather than convening an annual Child Health Summit, we now plan to use existing forums, meetings and other opportunities to effectively communicate learning and elicit feedback. We will consider convening a Child Health Summit(s) if existing means are not adequate.
Table B

Integration of CHIPRA Quality Demonstration Grant Health Information Technology (HIT) Activity with Other Federal HIT Grants

Maine’s Vision for HIE Governance and Oversight
Please refer to Attachment A at the end of this document for more information on Maine’s HIT/HIE Governance
Vermont

Proposed organizational chart and stakeholder diagram below. Please refer to Attachment A at the end of this document for more information on Vermont’s Governance.
CMS seeks to avoid duplication of efforts under multiple Federal HIT grant authorities and to promote approaches under which these efforts complement one another. Recognizing this, Maine and Vermont are working to coordinate their IHOC activities with the other HIT initiatives underway in each state. Table B describes the status of HIT activities in each State pertaining to other Federal HIT grants, including provisions of the American Recovery and Reinvestment Act of 2009 (ARRA), and how these activities complement IHOC objectives and will achieve synergy of efforts.
<table>
<thead>
<tr>
<th>State (specify Lead or Partner)</th>
<th>Grant Authority for Other HIT Federal Grant</th>
<th>Description and Status of HIT Activity Conducted under Other Federal Grant</th>
<th>Areas of Overlap with CHIPRA Quality Demonstration Grant (by Category)</th>
<th>How HIT Activities Will Be Coordinated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maine</td>
<td>OCN: Health Information Technology/Exchange</td>
<td>Enable the transformation: In adherence to federal guidelines for meaningful use of HIT, by 2015, all providers in Maine will have an EHR pursuant to National Standards and will be sharing appropriate clinical and administrative information through HealthInfoNet, the statewide health information exchange organization, to promote high quality and cost effective healthcare.</td>
<td>There is potential overlap between provider practices and the HIE vendor that are part of organizations adopting, implementing, and pursuing meaningful use. Project management strategies will need to be coordinated to assure the most efficient linkages to the HIE. There is opportunity for efficiency through coordination. Privacy and security strategies that are being developed complement the CHIPRA plan.</td>
<td>1. Active participation of the HIT Coordinator in CHIPRA management and planning meetings. 2. Updates of CHIPRA activities by a MaineCare representative at monthly HIT Steering Committee meetings. 3. Regular (not less than monthly) meetings between the CHIPRA Program Manager and HIT Coordinator to compare work plan progress.</td>
</tr>
</tbody>
</table>

2. **Security and Privacy:** All healthcare information shared and stored electronically will adhere to the most strict privacy, security, and confidentiality requirements as defined by the collaborative work of HIN, the State Government (including the Attorney General) and where possible the guidelines provided through federally supported projects such as the HISPC (discussed above).

3. **Patient focused health:** By 2015 all people of Maine will have secure electronic access to comprehensive healthcare information and will be assured that if they consent to participate in HIE, their providers will also have comprehensive access to their clinical information to guarantee the most informed decision making at the point of care.

4. **Improve the quality of care:** By 2015, all providers serving individuals and populations in Maine will achieve federal meaningful use guidelines, improve performance, and support care processes on key health system outcomes measures.

5. **Coordination of care:** Beginning in 2010 and phased in through 2015, the statewide health information organization, HealthInfoNet, will deploy statewide health information exchange services, connecting all providers, payers, laboratories, imaging centers, pharmacies, public agencies and
other relevant stakeholders. These services will allow for the appropriate, secure, and private exchange of relevant personal health information to the point of care for all Maine people consenting to participate, assuring that their healthcare is coordinated among all primary care and specialty providers.

6. **Benefit public and population health:** HIE activities in Maine will be aligned at every level possible through the Office of the State Coordinator for HIT (OSC) to assure that the data collected, where appropriate, is used to improve population health. As discussed above, statewide HIE services are critical for required disease reporting, biosurveillance, public health tracking (immunization IMPACT etc.), as well as population support functions of the Maine CDC.

7. **Promote public-private cooperation and collaboration:** All health information technology and exchange activities will be developed and overseen through structures that promote cooperation and collaboration among all public and private stakeholders, building upon existing partnerships developed throughout the history of HIE in Maine and in recognition of the specific public sector regulatory, accountability and fiscal functions.

8. **Promote efficiency and effectiveness of healthcare delivery:** Recognizing that HIT and HIE are tools, evaluation metrics will be iteratively developed and promulgated across the healthcare system of Maine to assure that HIT tools are used appropriately to the benefit the people of Maine.

Maine: ONC: Regional Extension Center: Assist providers across the state of Maine with a comprehensive set of technical assistance services and direct support offerings designed to ensure the successful implementation and meaningful use of Electronic Health Records (EHRs) for the purposes of health care quality improvement.

Workflow redesign, EMR implementation, and meaningful use reporting services are likely to be complementary as opposed to overlapping.

Key IHOC Steering Committee members participate on the Regional extension Center steering committee allowing coordination of effort and to address any duplication of effort that might occur.

<thead>
<tr>
<th>Maine:</th>
<th>ONC: Bangor Beacon Community Program</th>
<th>To implement and evaluate the impact of a Care Management Model that coordinates care management services from primary care and mental health, and telehomecare services for high risk/high cost chronic disease patients.</th>
<th>There is little likelihood of overlap and duplicative service to be performed in both the Bangor Beacon Community and the IHOC program as the populations of focus tend not to overlap significantly, with the Bangor Beacon focused on chronic diseases.</th>
<th>The HIT Coordinator sits on the Executive Steering Committee of the Bangor Beacon Community and the IHOC Steering Committee and has committed to addressing duplicative efforts should they occur.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maine:</td>
<td>CDC: improvements to Maine’s public health system</td>
<td>Complete an electronic death certificate system; make necessary updates to an electronic birth certificate system; build systems to allow health care providers to more easily transfer information on immunizations to Maine CDC; apply public health performance management principles in Maine CDC and its work; improve capacity for health planning at the state and district level; and make public health data more accessible.</td>
<td>There is no overlap in the work being planned by the MECDC in the immunization registry. Immunization registry IT functions are being modified for statewide infrastructure to support goals of MU and public health. There is no overlap in the scope of work related to updates to the vital record systems, but there may be opportunity to leverage that work. Specifically, members of the IHOC Steering Committee and staff have met with the MECDC to provide input on planned updates to the electronic birth certificate system, exploring the possibility of adding or modifying fields that could serve as a source of data for several of the perinatal CHIPRA quality measures in the new system.</td>
<td>Office of Information Technology, the HIT Coordinator, MECDC, and MaineCare representatives participate in the IHOC Steering Committee where reviews of work are discussed. Additionally there are regular (weekly and bi-weekly) meetings with OIT and the HIT Coordinator organized by the IHOC Project Manager to review plans and work of the various agencies against the work plan.</td>

</table>
In developing and testing systems of high-quality care for children, Maine and Vermont are including activities that will promote improved service delivery in areas of shared interest, with the aim of producing best practices that can serve as models for other States. CMS has requested that, to the extent possible, grantees align their efforts with specific goals related to Early and Periodic Screening, Diagnostic and Treatment (EPSDT) Services, obesity screening and treatment, oral health, and behavioral health. Table C describes how IHOC activities in Maine and Vermont will advance CMS’s goals in these areas.

<table>

<tr>
<td>EPSDT Service</td>
<td>Maine</td>
<td>1. Automate Bright Futures 2. Improve Implementation of Bright Futures 3. Track EPSDT/Bright Futures Measures</td>
<td>Automate Bright Futures- connect databases that collect data relevant to EPSDT screenings; implement Bright Futures toolkit and do training around screenings for development, autism, maternal depression, etc; Work with the state EPSDT Committee to educate providers about EPSDT services. Members of the state EPSDT committee have identified several preventive health measures that they would liked tracked by primary care providers including hearing, vision, obesity, and dental. These measures are being incorporated into the clinical quality measures for the pediatric practices in the Maine PCMH Pilot and will be</td>
<td>• Improve rate of EPSDT screenings in the state of Maine over the next 4 years. If we can improve reporting and capture clinical care already being performed by integrating the HIT efforts, the rates may show an initial increase on their own. In order to see a steady improvement of rates over time, we will need to do education with the physicians, practices, and work with families. In addition, to the extent that managed care contracts include financial incentives for ESPDT/BF screens this is also likely to improve screening rates by providers. • Increased provider awareness about EPSDT requirements • Increased screening for</td>
</tr>
</tbody>
</table>
collected quarterly by the practices. The Maine PCMH Pilot plans to initiate data collection of these measures with the pediatric practices, and will adapt these as needed as expanded pediatric measures become available from AHRQ. Pediatric practices in the Maine PCMH Pilot will be asked to report these clinical quality measures using a common web-based system currently being used by the adult practices in the PCMH Pilot. As noted in the section above describing Category A measures, the process for creating a common data system in Maine for collecting CQMs remains a work in progress but with a vision to develop a coordinated system for collecting CQM data directly from certified EHRs. As such, the initial efforts to collect EPSDT data within this initiative is very much linked to wider state HIT efforts.

Bright Futures performance measures will be built into the state HIT infrastructure (i.e. the Blueprint for Health central registry, DocSite). Additionally, pediatric practice facilitators will provide support to practices to implement Bright Futures. Pediatric practice facilitators use autism and developmental delay
- Identify barriers to children receiving services.
- Increased actionable data to inform policy and direct quality improvement efforts at ME CDC and MaineCare.

- Pediatric and family practices participating in the Blueprint will receive support to implement preventive services consistent with

</tbody>
</table>

<table>
<thead>
<tr>
<th>Vermont</th>
</tr>
</thead>
</table>

Obesity is a focus in both children’s preventive services and Vermont’s chronic care initiative. UVM/VCHIP, with support from DVHA and the Vermont Department of Health, has conducted a quality improvement project with six primary care practices to improve body mass index (BMI) measurement and intervention. In another collaborative project between DVHA, UVM/VCHIP, Vermont track BMI with Bright Futures encounter forms and create electronic system to track nutrition and physical activity counseling; consider working with Let’s Go (Maine Medical Center/MaineHealth’s Child Obesity Prevention Program) and the 5-2-1-0 initiative in Maine on training around obesity with providers. Maine Medical Center/Let’s Go has a NICHQ/HRSA grant on obesity where they are hoping to run an IHI style learning collaborative over the next 18 months with 50 groups nationally, recruiting some groups in Maine. We are hoping to work with them to spread their efforts although we do not expect to be leading them at this time. The Maine Youth Overweight Collaborative is over 3 years old in the state and has done extensive work with the practices.

Obesity performance measures

- Collect BMI and assess number of children with MaineCare who are overweight/obese
- Increase screening and counseling for nutrition and physical activity
- Identify community and medical resources to help families work on issues around obesity.

Pediatric and family practices participating in the Blueprint will receive support to implement the obesity guidelines and collect on obesity performance measures (including the HEDIS measure) through the DocSite registry.
| Oral Health | Maine | Report on CHIPRA measures and CMS 416 around oral health. | Will track oral health measures; create awareness around EPSDT dental measures; coordinate efforts on improving dental care in state with From the First Tooth Program and Maine Oral Health Program. The First Tooth Program located in MaineHealth has funding from the Harry and Sadie Davis Foundation to do practice improvement around dental care and fluoride varnish. They do site visits, have a physician champion, and provide training throughout the state. The Maine Kids Oral Health Partnership also provides leadership on pediatric dental issues and training around fluoride varnish. We would hope to spread the word about these programs with the practices, but do not expect to be doing the actual practice improvement work in this area since |
| Department of Health, Department of Banking, Insurance, Securities and Health Care Administration (VT’s regulatory agency), BlueCross/ BlueShield, MVP, and CIGNA, 34 pediatric and family medicine practices improved BMI measurement for teen age youth. Methods used in these successful efforts could be expanded to the additional pediatric and family practices signing onto the Blueprint. | will be built into the DocSite central registry. Additionally, pediatric practice facilitators will provide support to practices to implement the obesity guidelines in Vermont. |

- Increase oral health risk assessment screening
- Track number of children who have identified a dental home and work to increase available services
- Increase fluoride varnish application for children receiving dental services
- Improve collaboration between the medical and dental communities.
<table>
<thead>
<tr>
<th>State</th>
<th>Oral Health Goals</th>
<th>Behavioral Health Goals</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vermont</td>
<td>Oral health is an integral part of the implementation of Bright Futures and will therefore be included in the implementation of the guidelines in Vermont. It is a particular focus for pediatricians and family physicians for young children birth through age 3. Additionally, an oral health risk assessment tool has been developed and tested nationally and will be available for use by pediatric and family practitioners. The Bright Futures performance measure “oral health risk assessment was conducted by 12 months” will be built into the DocSite registry. Additionally, pediatric practice facilitators will provide support to practices to implement the Bright Futures standards, inclusive of oral health.</td>
<td>- Pediatric and family practices participating in the Blueprint will receive support to implement the oral health guidelines and collect on oral health performance measures through the DocSite registry.</td>
</tr>
</tbody>
</table>
| Maine        | 1. Automation of Foster Care Health Assessment  
2. Look at feasibility of behavioral health measures | Part B: Automating Foster Care Comprehensive Health Assessment; Part C: Considering practice improvement initiatives around integrating behavioral health in primary care in years 3-5.  
- Increase primary care provider’s understanding of the foster care system and behavioral health needs of these children.  
- Increase access to records of children in foster care to families and providers  
- Improve patient’s access to behavioral health services in their PCMH  
- Create closer collaboration between medical and behavioral health communities by involving experts from both communities in the selection and piloting of behavioral health measures in primary care practices as part of the demonstration. |
| Vermont | Behavioral health/mental health screening is part of the Bright Futures guidelines for school age children and adolescents. Additionally, maternal depression screen is the *Bright Futures* standard for children less than 6 months of age. | The Bright Futures performance measures for behavioral/mental health will be built into the DocSite central registry. |

In addition, behavioral health may be the focus of one of the learning collaboratives once measures have been collected to see where performance needs improvement. We plan to convene primary care and mental health experts to help build collaborative efforts in these areas.

- Pediatric and family practices participating in the Blueprint will receive support to implement the behavioral/mental health and maternal depression screen and collect on the associated performance measures through the DocSite registry.
Table D

Grant Implementation Milestones – Master Timeline

The implementation plan described in Tables D and E serves as a detailed road map for the full lifespan of the IHOC grant and describes the individual tasks needed to conduct the demonstration from February 22, 2010 (notice of award) through April 21, 2015 (final report due). This plan describes, in sequence, the key milestones overall and for each category that will be necessary to implement the demonstration. Among the milestones included is submission of the deliverables required by CMS and listed in Appendix 9.

Please note that each task listed in Table D has subtasks or interim steps listed in Table E. We have noted the corresponding subtask for each task in the remarks section below.

<td>Cross-listing of CHIPRA, Bright Futures, and meaningful use measures. Final list of pediatric measures for practice improvement. Awaiting final CHIPRA measures specifications</td>
<td>MPI, MSPS, ME CDC, OMS, MPI, QC</td>
<td>PCMH Pilot pediatric practices are not required to collect CHIPRA measures as part of the PCMH Pilot; however, they are active participants in the CHIPRA MPI Subcommittee and are collaborators. Yes- all 4 PCMH pediatric pilot sites will participate in IHOC. The Maine PCMH Pilot preexisted CHIPRA in the state- they are 1.5 years into a 3 year pilot so they are already working on a set of pediatric quality measures for their EMR collection ahead of many of the national deadlines for CHIPRA. We hope to align as many measures as possible and expect when national pediatric quality measures set is finalized that the PCMH may have to adjust over time to new measures. For more detail, please refer to subtask C-1.1 in Table E</td>
</tr>
<tr>
<td>C-1.1</td>
<td>Pediatric practices in the PCMH Pilot will integrate the identified measures into PCMH pilot</td>
<td>Aug-10</td>
<td>Sep-11</td>
<td>At least 75% of EMR based pediatric measures in CHIPRA set will be incorporated into PCMH</td>
<td>MPI, MSPS, ME CDC, OMS</td>
<td>Timelines for PCMH Pilot and CHIPRA IHOC projects are not matching up since PCMH is 1.5 years underway and CHIPRA core measures won’t be finalized until Feb 2011. Will need to work with pediatric PCMH groups to adjust measures over time.</td>

<td>UVM/VCHIP; Vermont state partners (DVHA, Department of Health)</td>
<td>VCHIP provides direct, one-on-one TA to states. NIPN provides a forum for UVM/VCHIP, as well as other IP member states receiving CHIPRA funding (i.e. NM, OR, UT, and WV), to share activities and learnings under the grant to network members, based on the interests of the group. One topic related to ME/VT’s CHIPRA grant that has been an area of discussion for the network to date includes the role of Improvement Partnerships in assisting pediatric/family practices in achieving NCQA medical home recognition. UVM/VCHIP has been playing this role in the Vermont Blueprint for Health’s work with the adult population, and will continue in the initiative’s expansion to pediatrics, providing additional opportunities for learning about NCQA medical home recognition in child-serving practices. As ME/VT’s grant work gets underway, project staff will have the opportunity to share learnings around other areas of grant implementation, including the automation of Bright Futures, supporting provider implementation of Bright Futures and other clinical guidelines, and supporting pediatric/family practices in their use of EHRs.</td>

| Grantee: Maine | Maine DHHS including: OMS, ME CDC,OIT, & OSC-HIT, MSPS AAP, Maine Chapter Maine Parent Federation Quality Counts Vermont’s DVHA UVM VCHIP AAP, Vermont Chapter Child & Family Advocate TBD | Co-Chairs: Rod Prior Steve Maier | **Organizational Structure:**

**IHOC Executive Committee meets 2x/yr during implementation and serves as the primary oversight committee:**
- Provide expert guidance to grant activities; ensure consistency of activities with national and federal policy and initiatives
- Ensure visibility of the demonstration within Maine and Vermont, regionally and nationally
- Ensure stakeholder representation and buy-in in both states
- Ensure communication, coordination and integration between Maine and Vermont
- Ensure communication, coordination and integration with other child healthcare quality and related child health and wellness efforts within and across states
- Provide final approval of a cross-state 5-year Operational Plan to include an evaluation plan
- Serve as a resource to CMS and its technical assistance and evaluation contractors for the demonstration
- Other roles as appropriate to support planning, implementation and evaluation of the demonstration, project goals and CMS objectives

Maine 1-14-2011 105
Monitoring Plan

The progress and success of this demonstration will be monitored using the framework of goals, objectives, strategies, and activities articulated in the final Operational Plan for the demonstration developed in the initial nine-month planning phase. With regard to project administration and implementation, we will utilize the implementation plan presented at the top of this Section to monitor project administration and implementation. Progress and challenges will be measured and reported on a monthly and quarterly basis for each of the Categories for Maine and Vermont as well as for cross-state activities. The implementation plan, additional work products, plans and meeting minutes will be posted on SharePoint for cross state review.
Maine and Vermont have objectives and tasks in their operational plans that will require the expert advice and implementation assistance of several key external partners. To the extent that these needs and potential partners have been identified, this information is presented in Table G. While we do not anticipate these needs overlapping with areas of technical assistance that CMS will provide to all grantees, we recognize that should this occur we would need to adjust our TA plans and contracts accordingly.

Evaluation Activities

Provide the information requested below:

Grantee: __Maine and Vermont_________________

Does the grantee plan to conduct any independent evaluation activities?
Yes  X__  No _____

What is the status of these planned activities?

The Muskie School of Public Service (MSPS) and the University of Vermont (UVM) have worked with their respective state partners to develop logic models to describe each state’s activities and to identify short-term, mid-term, and long-term goals of the project. From these logic models, each state will develop an evaluation plan for measuring progress toward program goals. Maine’s approach is primarily formative and will be designed to assist the state in conducting environmental scans, collecting baseline information and qualitative feedback from practices and consumers in advance of and during implementation to inform system design, and tracking and monitoring measures over time to assess program impact. Maine has two logic models. The first logic model reflects Maine’s goals and strategies for supporting practice improvement for providers serving all MaineCare children in the state. The second logic model is focused on the work that they are doing to improve medical management and care coordination for foster care children. Both logic models are attached.

UVM has also developed a logic model for the Blueprint for Health initiative as a whole, which applies to both the adult and pediatric populations, which they plan to evaluate based on metrics and outcomes defined.

UVM is also currently in the process of designing a local evaluation of the Improvement Partnership model and the National Improvement Partnership Network (Category E). Evaluation questions are being drafted and discussed both internally and with the national evaluator and project stakeholders. A national advisory committee to this evaluation has been formed and has completed its first meeting by teleconference.
Together the states also will define shared metrics to be included in a cross-state evaluation comparing changes in pediatric quality with different approaches. The team intends to coordinate closely with the national evaluators to ensure that there is no duplication with the national evaluation.

Maine’s evaluation activities in Category A and B entail process and formative evaluation that will supplement and inform the national evaluation in terms of contributing to the collection of data needed and identification of barriers encountered but that are primarily intended to provide real-time information to inform program design and improvement. These activities will include quantitative and qualitative data collection to monitor program progress and barriers/solutions, analyzing performance on measures over time to identify areas for quality improvement, and gathering information to identify appropriate and meaningful strategies for reporting that will supplement providers' existing systems. For Category C, Maine will expand its evaluation of the patient centered medical home pilot, which began in 2009 to include pediatric practices and measures. As an extension of the broader evaluation of adult PCMH practices, we will be comparing the experience of the Pilot practices with two groups of comparison practices: those that applied but were not accepted for the Pilot (n=24) and a sample of “usual care” adult primary care and pediatric practices (n=66). We provided an overview of our proposed methodology to the National Evaluators in conference calls and await upcoming discussions in January to discuss strategies for coordinating our local evaluation with the national evaluation. These strategies will be addressed in our evaluation plan addendum when the plan of the National Evaluation is more clearly defined.

Vermont’s proposed activities under Categories B and C involve assisting in the legislatively mandated expansion of an existing program of the State of Vermont, the Vermont Blueprint for Health, to the pediatric population. This mandate, Act 128, states that “the commissioner of Vermont health access shall expand the Blueprint for Health as described in chapter 13 of Title 18 to at least two primary care practices in every hospital services area by no later than July 1, 2011, and by no later than October 1, 2013, to primary care practices statewide whose owners wish to participate.” The Blueprint has devised a list of practices in the state that have expressed interest and are considered ready to join the Blueprint through July 2011 which they are sharing and discussing with partner organizations. Three pediatric practices are currently included on this list.

Given this programmatic framework, in our initial discussions regarding an evaluation design for the expansion of the Blueprint for Health to pediatrics, we discussed the possibility of using a phased time-series design to study changes in clinical processes and possibly child health outcomes. In this design, baseline chart review data would be collected on a random sample of children (with conditions of interest as well as well children to look at preventive services) in the initial three pediatric practices joining the Blueprint as well as three practices as similar to the initial three as possible who had not yet been chosen to join the Blueprint. One of the difficulties identified with this approach would be that the three practices chosen as comparison practices may be chosen by the Blueprint to join the initiative within varying timeframes, before post data collection was set to occur. Discussions will continue with UVM/VCHIP and Muskie evaluation staff, Blueprint leadership, and the National Evaluator to determine appropriate comparison
practices that meet the needs and requirements of both the legislative goals of the Blueprint and the National Evaluation of the CHIPRA grant. The outcome of these discussions will be described in the evaluation plan addendum to this Final Operational Plan.

In terms of an evaluation design to examine change in medical homeness, the Blueprint has used the NCQA PPC-PCMH survey, administered by a UVM/VCHIP evaluation team, to score practices in order to determine the multi-insurer per member per month (PMPM) enhanced payment. This process is considered the entry point into the Blueprint program and will be continued as the program expands statewide (including to pediatric practices). The survey may be repeated annually in participating practices by VCHIP in order to track improvements in medical homeness over time and to compare scores to clinical health and process outcomes (collected annually).

We will continue to collaborate and coordinate with the National Evaluator on all of these activities in order to provide all required data to the national evaluation.
FIRST PROGRESS REPORT

Tables H1 – H5

The following tables, H1 – H5, represent the progress report for Maine and Vermont’s IHOC activities that occurred between February 22, 2010 and November 22, 2010. These tables identify major milestones that have been achieved as well as their outcomes. In addition, we note changes in task completion dates, barriers to completion, and lessons learned while preparing for implementation.

<table>
<thead>
<tr>
<th>Reasons for Variance in Completion Date</th>
<th>Task is revised and incorporated into new Implementation Plan as a key, on-going activity through-out the grant period.</th>
<th>Task revised and incorporated into new Implementation Plan</th>
<th>N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Outcome</strong></td>
<td>Maine SCC and the MPI Subcommittee have both met several times since 7/10. Outreach efforts were successful, and current members include representatives from targeted organizations and stakeholder groups. Focus of the first several MPI Subcommittee meetings was on presenting and getting feedback on the CHIPRA core measures and additional measures recommended by the Maine AAP Quality Improvement Subcommittee. Feedback will be sought throughout grant period. Maine providers required to report on numerous measures, which vary according to payer, quality improvement organization, etc. (e.g. HIT/meaningful use criteria, CHIPRA measures, UDS reporting for FQHC providers, Pathways to Excellence for MHMC providers). A new task is added to align pediatric quality measures as much as possible.</td>
<td>Draft measures available have all been reviewed and implementation plan completed for the FOP. We will contrast, compare and revise implementation plan if necessary, once measures are finalized. The following 8 Draft Measures are currently produced from MaineCare claims data for the PCPIP and UR reports: - Chlamydia, WCVs in first 15 mo, WCVs in 3-6 years, WCV 12-21 years, ED visits, ADHD f/u, Hemoglobin A1C, Access to Primary Care Programming for the extraction of the following Draft Measures from MaineCare claims is complete: - Preventive Dental Services, Pharyngitis, Otitis Media, Received Dental Treatment Services, f/u mental health. (Waiting for final specifications for asthma ED visit measure.)</td>
<td>Several members of the CHIPRA steering committee are on the planning committees for the managed care transition and are working to ensure that the MCOs will be required to provide the data - CHIPRA staff and/or members of the Steering Committee will also participate in the Finance and Operations subcommittees to ensure that requirements of managed care contracts include performance incentives for providers, including participants in the state’s PCMH Pilot</td>
</tr>
<tr>
<td><strong>Barriers Encountered/ State Response</strong></td>
<td>Providers have limited time to attend meetings. Project is maximizing participation by using conference call option and by scheduling meetings during lunch hour. Annual pediatric summit proposed in the original proposal has been</td>
<td>We anticipate needing to code and extract some measures from claims, and determine what is necessary to access payer-specific data for some claims that are not currently identified by payer</td>
<td>We will report barriers and state response as we move forward.</td>
</tr>
</tbody>
</table>
eliminated in favor of ongoing communication with provider community throughout grant period through the MPI, Grand Rounds and electronic communication.

Impact of the implementation of Managed Care on the collection of the Core Measures is not known at this time. For example, production of measures based on claims may need to be shifted to managed care organizations (through contracting), or the development of an encounter data warehouse. State investigating other states experience testing CHIPRA core measures with Medicaid managed care to inform MCO contract requirements/use of encounter data.

Claims-based measures may not accurately reflect services provided by FQHC and RHC practices that bill under a bundled payment. FQHCs also indicated differences in measures they are required to report to HRSA and core measures.

State is working with the FQHCs in order to improve validity of measures.

Lessons Learned

Providers involved in SCC and MPI have made strong recommendation to align the pediatric measures required by CHIPRA with those required by QI organizations, health systems, HIT/meaningful use criteria, and other funding or regulatory organizations. Not feasible for providers to collect or provide data on several versions of the same measure

Stakeholder feedback indicates limited time and resources available for measure collection activities. Minimizing impact on practices will be important to successful implementation.

Technical Assistance Needs

Remarks

Final measures have not been posted. Draft measures reviewed.
## H3: Grant Category B

<table>
<thead>
<tr>
<th>Task</th>
<th>ME Task B-1: Collaborate &amp; coordinate with Health Systems &amp; FQHC’s to determine interface specifications in order for them to participate in the automation &amp; exchange of EPSDT data <em>(Bright Futures)</em></th>
<th>ME Task B-2, B-3: Design, implement &amp; evaluate an electronic health data system for children in ME’s foster care system.</th>
<th>ME Task B6: Design Implement &amp; Evaluate an electronic data system for <em>Bright Futures</em> (EPSDT in ME) (originally Task B-1 and revised in new Implementation Plan)</th>
</tr>
</thead>
</table>
| **Description** | -MPI Subcommittee membership represents health systems & FQHC’s and are working to identify prioritize, standardize and define measures to automate:  
  - map them to meaningful use standards  
  -determine additional measures to collect  
  - coordinate with Pathways to Excellence (MHMC) and other professional associations  
  -“As Is” Assessment in process to determine how providers currently use & submit EPSDT data to MaineCare | -The original objective as stated above has been modified and expanded to several subtasks relative to the original grant proposal, due to the complexity and level of detail necessary to establish an electronic health assessment for children in foster care.  
  We convened work groups on three occasions to identify & prioritize work flows & data elements  
  An “As Is’ Assessment is underway to determine current work flows.  
  Work group reviewed the implementation plan and provided feedback on the plan described in Tables D and E of this Final Operational Plan. | -The original objective as stated above was listed first relative to the original grant proposal. It has since been modified with different start and end dates, due to the complexity and need to address multiple tasks.  
  For example, the original task indicated an immediate focus on developing a platform for data entry.  
  Since then, we received a recommendation to consider developing an interim electronic EPSDT system, prior to the design and implementation of the automation infrastructure.  
  We are now reviewing this recommendation and have created additional tasks and subtasks accordingly. | -Maine’s system of health assessment of children in foster care relies on a system of comprehensive assessment by a small number of pediatric care organizations who have special training and experience in the assessment and treatment of children in foster care.  
  We plan to pilot secure, electronic linkages and connections between authorized users in a health assessment clinic that serves six counties in Maine, and a state electronic data system.  
  In addition to expediting the health assessment process, this will also serve to create an electronic health record in the Office of Family and Child Services. This assessment will be available for health care providers, and guardians as the children leave foster care and/or age |

*Numbers indicate cross-reference to tasks on Tables D and E*
Another example is associated with the original subtask of identifying a central repository system. We have since learned we need to complete a thorough assessment of current state systems to determine alignment capacity.

We also need to determine specific data fields as a preliminary step to building an automated data system.

All of the above are now reflected in additional tasks and subtasks on the Implementation Plan.

Simultaneously, Maine has privacy laws regarding the release of mental health and HIV data which impact the flow of this information through the Health Information Exchange. A legal work group has been formed and is working to introduce legislation that will amend current state law to allow for an opt-in consent mechanism for the exchange of “high risk” data. If passed this would allow for the exchange of behavioral health and other sensitive information with appropriate consents. If the state legislation does not pass, the state will continue to work with consumer and advocacy interests (including the Civil Liberties Union) to determine a strategy that will allow consent to be given for exchanging information appropriately which may include a requirement of physicians and other practitioners to solicit consent to share information during a patient visit.

Currently the HealthInfoNet Consumer Advisory Committee, the Office of the State Coordinator for HIT and the Attorney General are working on strategies to
address such a contingency. The IHOC grant will also work with state officials within the Maine DHHS Office of Child and Family Services, the State HIT Coordinator, and members of the Legal work group to develop an alternative means of distributing the foster care health assessments while working towards a solution.

Maine 1-14-2011  120
relation to the need for a central repository.

Need data fields prior to starting to build electronic data system. Purchased Bright Futures Toolkit and license. Specific requirements related to License require a change in licensee and signed statements by Clinical Consultants.

-Need for coordination of efforts reinforced especially in light of competing demands on providers.

-Multiple EMR’s in use state-wide. Plan to engage health systems participation in IHOC HIT Subcommittee

identified.

Expense to address multiple data system is higher than anticipated.

Also complicated by state and federal laws. Legislative action needed to change state laws regarding the sharing of behavioral health data.

Responses:
-System design redefined, with a phase –in process.
-Communications with State HIT Coordinator about a legal work group addressing behavioral health barriers.

<tr>
<td>Barriers Encountered/ State Response</td>
<td>-Every group has different specifications and requirements that they must meet; measures are all different- different immunizations required, different well child check measures, etc; -CMS priority areas are not fully reflected in CHIPRA measures (hearing/vision). -PCMH Pilot began prior to CHIPRA demonstration grant and the pediatric practices participating in the Pilot are already doing a lot of intensive work on practice transformation. They are interested in CHIPRA demonstration grant; yet don’t want to over commit. -Collaborating with physicians is essential. AAP QI Committee is key partner of CHIPRA and has worked on measures along with guidance from Maine CDC, Quality Counts, PCMH Pilot and EPSDT Advisory Committee. Issue identified re: payer-specific, practice-specific measures. Several existing QI initiatives’ measures are not payer-specific. State is convening stakeholder group to discuss whether to collect data on all children or MaineCare children alone.</td>
<td>-We have reached out to providers at different health care systems to join MPI Subcommittee. It took significant, targeted outreach from physicians to recruit providers other than pediatricians. -We invited senior leaders of health care systems to join MSCC. It is difficult for them to come to a centralized location. -We will develop a coordinated effort to engage health care executives and go to their locations. Paper state encounter forms are different from new Bright Futures format and therefore need to be revised.</td>
</tr>
<tr>
<td>Lessons Learned</td>
<td>-CHIPRA Physician Consultants aid the engagement and participation of the practices -Health care systems and practices are interested in meaningful use measures and reimbursement; -Need to make CHIPRA measures relevant to organizations Recommend greater alignment nationally on measures because it is very confusing for practices -Need to coordinate QI efforts so that we don’t overwhelm practices and providers with busy clinical practices</td>
<td>-We need a multifaceted approach, utilizing existing means to reach providers- Grand Rounds, emails; talks at conferences; updates to Maine Academy of Family Practice and Maine Chapter of AAP. -Need to engage senior leaders personally and at their offices- it is unlikely to get them to come to frequent meetings in Augusta -Maintenance of Certification (MOC) provides an incentive for pediatricians to participate in quality improvement initiatives.</td>

</table>

| Barriers Encountered/State Response | -We are talking with different groups about a neutral location for pediatric improvement partnership. Several groups are interested, but they don’t all have the infrastructure needed, engagement of senior leaders in organization, or provider buy-in to be successful.  
We are working with Quality Counts on developing pediatric improvement partnership and have identified the importance of including other QI partners the effort.  
-Many QI initiatives are struggling financially and looking for financial resources. |
|-----------------------------------|------------------------------------------------------------------------------------------------|--|

| Lessons Learned | -Many groups are interested in developing or being part of an Improvement Partnership. We need to develop infrastructure. Many groups are interested in further funding for projects and are struggling to determine sustainable funding source- several health care organizations have infrastructure, but do not reach all pediatric groups in the state |
|----------------|------------------------------------------------------------------------------------------------|--|
CHIPRA Demonstration Grant may be able to assist in finding ways to bridge health systems to spread change.

- Several different QI organizations are doing pilots at the same time of the CHIPRA Demonstration Grant and we need to work together so we are not overwhelming practices with different efforts.

We will start to build Pediatric Improvement Partnership to try and coordinate efforts as well as inform practices of what QI opportunities are available.

### H5: Grant Category E

<table>
<thead>
<tr>
<th>Task</th>
<th>VT Task E-1: Assist 20 states in developing a sustainable state Improvement Partnership by 2015</th>
</tr>
</thead>
</table>

*Numbers indicate cross-reference to tasks on Tables D and E*

| Description | - UVM has launched a NIPN website housed on the UVM College of Medicine website; UVM has also initiated an online TA resource center available to network members. Resources developed by VT as well as other network states are being uploaded and made available to the full network.  
- During the planning phase, IHOC project staff at UVM/VCHIP proposed to conduct a systematic technical assistance (TA) needs assessment across existing Improvement Partnership states to inform resource development and key areas for TA provision to new states. |
| Start Date | Revised date Jan 11 |
| Target Completion Date | 11/2010 |
| Actual Completion Date | Not yet complete |
| Reasons for Variance in Completion Date | UVM/VCHIP has continued to support the existing National Improvement Partnership Network (NIPN), providing TA to member states through funding from The Commonwealth Fund (grant end 2/28/2011). Under the Commonwealth grant, VCHIP conducted an operations training in July 2010 to address select operations-focused TA needs identified by member states. A more systematic TA needs assessment will be conducted in the implementation phase of the CHIPRA grant. |
| Outcome | |
| Barriers Encountered/State Response | UVM/VCHIP’s goal in moving from Commonwealth funding to CHIPRA to support NIPN was to ensure that IP member states experienced a seamless transition. To accomplish this goal, the UVM/VCHIP team balanced planning under CHIPRA with implementation under Commonwealth funding. We were able to secure a no cost extension on the Commonwealth contract to ensure that all implementation was covered under this funding stream until we received CMS approval of the Final Operational Plan for implementation to occur under CHIPRA. As part of the Category E planning discussions, the TA needs assessment was designated as an implementation activity, and was therefore shifted to occur in the first 6 months of Year 2 of the grant. |

MAINE HIT/E

Under the Maine Center for Disease Control and Prevention, the Office of the State Coordinator (OSC) for HIT is administered by the State HIE Coordinator and a staff to carry out its activities. In coordination with the members of a statewide steering committee, which includes IHOC representation through both Medicaid and Public Health representation the OSC for HIT is responsible for statewide HIT & HIE planning, aligning the HIT planning efforts with the State Health Plan, ARRA Planning/Implementation, State Agency Coordination on all HIT related efforts, and financial and regulatory oversight of HIT and HIE efforts and initiatives throughout the state. The office is staffed by the State HIT Coordinator and project management and administrative staffing to support all statewide HIE planning efforts.

The OSC for HIT is tasked with the following:

§ Serve as a focal point on HIT and HIE policy and assure coherent, collaborative cross agency state HIT planning

§ Serve as a clearinghouse for all state HIT policy

§ Coordinate efforts across State government agencies (MaineCare, Maine CDC, Department of Education, Division of State Employee Health Benefits, Maine Emergency Management Association, and other appropriate agencies)

§ Align HIT planning efforts with the State Health Plan

§ Coordinate ARRA HIT/HIE planning and implementation, and provide financial and regulatory oversight of HIT and HIE efforts and initiatives throughout the state

§ Develop and disseminate public information about HIT and HIE through partnerships with stakeholders

§ Work collaboratively with HIN, the State’s designated health information exchange, or its successor, pursuant to the public-private partnership as outlined in the State HIT Plan

I.I.1 State HIT Coordinator

The State HIT Coordinator is responsible for fostering the secure movement of health information across the state and effectively working within state government, and with public and private sector stakeholders. To assure appropriate collaboration between the OSC, HIN, MQF, and MHDO, the State HIT Coordinator participates on the Board of each of these organizations
The State HIT Coordinator is responsible for the following tasks:

§ Develop Maine’s Strategic and Operational Plan for statewide HIE in alignment with the state’s vision, direction, requirements, and the needs of Maine’s health care stakeholder community

§ Coordinate an integrated approach with the State Medicaid HIT Plan

§ Coordinate an integrated approach with HIN, Maine’s statewide HIE organization and Regional Extension Center (REC)

§ Coordinate HIT activities across State government and the private sector

1.1.2 Health Information Technology Steering Committee (HITSC)

The Health Information Technology Steering Committee (HITSC) advises the Office of the State Coordinator for HIT in developing the vision, goals, and prioritization areas for advancing HIT and HIE across Maine and to develop appropriate governance, oversight, and accountability mechanisms to assure success.

The HITSC consists of twenty-six (26) members, twenty-two (22) of whom are appointed by the Governor. The State HIT coordinator serves as the Chair.

The diversity in representation on the HITSC brings together multiple viewpoints from a variety of stakeholder groups to ensure that all perspectives are accounted for in developing the vision and goals of HIT and HIE throughout the State of Maine.

### 1.1.3 Standing Committee Composition and Responsibilities

Five standing committees will support the OSC to provide a direct venue for other stakeholders to advise and assure that the OSC is representative of the breadth of interests across the state. Each committee will have representatives appointed by the State HIT Coordinator in alignment with the HITSC. The five standing committees and their responsibilities are listed below:

<table>
<thead>
<tr>
<th>Committee</th>
<th>Committee Responsibilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>HIT and HIE Adoption/Implementation</td>
<td>This committee will work to assure implementation and adoption issues are addressed to promote alignment across HIE Cooperative Agreement activities, the Medicaid and Medicare incentives, the Regional Extension Centers, and other Federal and State projects and initiatives.</td>
</tr>
<tr>
<td>Privacy, Security, and Regulatory Committee</td>
<td>This committee will specifically address state and federal laws and regulations that relate to both HIT implementation and electronic sharing of that information with appropriate parties. This committee will work closely with HealthInfoNet and the State Attorney General to rapidly address State law that impedes providers from appropriately sharing health information. Over time it is expected that this committee will take on additional regulatory roles at HIE activities proliferate statewide.</td>
</tr>
<tr>
<td>Consumer Committee</td>
<td>This committee, already convened by HealthInfoNet, will now support both the OSC and HealthInfoNet in addressing consumer safety, privacy, and security concerns. Additional members may be added by the OSC if it is determined that the existing structure lack representation or depth. Initially the Consumer Committee will be reviewing reports from the Privacy, Security, and Regulatory Committee and determining a course of action on the issues outlined in that report.</td>
</tr>
<tr>
<td>Financial Accountability and Sustainability Planning Committee</td>
<td>This committee’s primary responsibility will be to conduct financial and sustainability planning to assure the investments made for HIE result in a viable health information exchange operation in the long-term. The Committee will develop a strategy to gain sustainable financial funding. Consultation to the group will be made available by the Attorney General’s legal staff. (This committee will be made up of HIN’s Financial Committee members along with other public representatives).</td>
</tr>
<tr>
<td>Quality and Systems Improvement Committee</td>
<td>To assure that the HIT and HIE activities of the OSC and HealthInfoNet are aligned and support broad health systems improvement initiatives, this committee will bring together members of Maine’s quality and systems improvement groups to assure that HIT tools are being used in a manner that improves the health of all Maine citizens. The OSC will coordinate the work of this committee with that of the REC and will involve members of Maine’s Chartered Value Exchange to direct and oversee quality improvement strategies to assist practices in achieving each stage of meaningful use.</td>
</tr>
<tr>
<td>Technical and Architectural Committee</td>
<td>This committee will be chaired by the State’s Office of Information Technology (OIT) and is currently being formed. The Director and Associate Director of OIT have committed to addressing issues of system compatibility with the various state systems and HIN. A meeting is scheduled for March 9th to begin the process of identifying issues and membership. The committee will also be connecting with and including members of HIN and its technical staff for work on this committee in the future.</td>
</tr>
<tr>
<td>Workforce Development Committee</td>
<td>This committee is chaired by associate Director of the Department of Labor and includes the President of a local community college that was the primary applicant of a community college consortia application to ONC. There are also membership requests to the state university system, specifically a campus that is focused on introducing HIT within its college of health sciences at the baccalaureate level. Other members of the sub-committee will include local business, hospital IT, and planners from the Department of Labor. Both the chair and president of the community college are active members of the OSC Steering Committee.</td>
</tr>
</tbody>
</table>
The Standing Committees will address the key issues relevant to HIT and HIE by functioning as work groups to support the OSC and assure that the OSC is addressing a variety of interests across the state.

1.2  **Statewide Health Information Exchange – HealthInfoNet**

HealthInfoNet is the designated Health Information Exchange (HIE) entity for the state of Maine. HIN is an independent, nonprofit 501c(3) organization whose mission is to create an integrated statewide clinical data sharing infrastructure that will provide a secure data sharing network for public and private healthcare stakeholders in Maine.

The HIN Board provides a knowledgeable group of individuals with HIE expertise to build upon the ongoing HIE experience and efforts of HIN.

1.2.2 HIN Standing Committee Composition and Responsibilities

1.2.2.1 HIN Finance Committee

This committee is comprised of members with experience and expertise in financial matters, chaired by the HIN Treasurer and with the HIN Chief Executive Officer as an ex-officio member. This Committee is responsible for developing the HIN’s financial policies, assisting the Chief Executive Officer in developing annual budgets and reviewing HIN’s financial statements and for other related duties as may be prescribed by the Board from time to time. This Committee will continue to serve as a HIN standing committee but members of the committee will also serve on the OSC Financial Accountability and Sustainability Planning Committee. It is planned that the new committee will address the budget requirements for the statewide HIE, develop a sustainability plan for long term financing, and coordinate the funding of the HIE with monies awarded to other ARRA programs.

1.2.2.2 Consumer Advisory Committee

The membership of the HIN Consumer Advisory Committee is comprised of citizens, consumer advocates, consumer organizations, legal experts, health educators, privacy officers, public health professionals, and interested parties with experience and expertise in consumer participation and privacy protection in health information technology systems. The Committee is chaired by a member of the HIN Board. The Committee has been responsible for reviewing and advising on all policies and procedures related to the confidentiality of the HIN clinical data and the privacy protection for patients. The Committee has addressed HIPAA, State law requirements as well as other federal and State guidelines and initiatives, and public health data laws. This committee has been instrumental in the development of the opt-out provision for patient participation in HIN. Today, a number of key consumer advocacy organizations represent the interests of their respective constituencies on the HIN Consumer Advisory Committee. These organizations include the Family Planning Association of Maine, Legal Services for the Elderly, Maine Center for Public Health, the Maine Civil Liberties Union, Maine Disability Rights Center, the Maine Health Management Coalition, the Maine Network for Health, the National Alliance For the Mentally Ill and the and the University of New England Health Literacy Center. The OSC and the HITSC identified the need for a Privacy, Security, and Regulatory Oversight Committee that would be responsible for addressing the legal and regulatory issues for the statewide HIE, support the harmonization of state and federal law, draft legislative recommendations as needed and where appropriate develop/recommend regulatory roles for OSC and the Governor’s Office in regard to the sustainable business functions to support HIE statewide. The Consumer Committee is a shared function of both OSC and HIN with a focus on advising both the policy and operational areas and working closely with the Privacy, Security, and Regulatory Committee.

1.2.2.3 Technical and Professional Practice Advisory Committee (TPPAC)

The membership of this committee is comprised of Chief Information Officers, Chief Medical Directors, IT experts, and practicing clinicians. All members have experience and expertise in the implementation and use of health information technology, clinical data sets, and/or public health
information systems. Committee members also represent providers and clinical practices with varying degrees of electronic medical record system use including non-users. This Committee serves as the technical advisory body to the HIN Board and works closely with the HIN staff to manage the statewide HIE deployment. It is expected that this committee will remain as a standing committee of the HIN with a working relationship with the OSC Technical Architecture Committee focusing on Public Information Technology interoperability with HIN.

1.3 Coordination between the Office of the State Coordinator, HealthInfoNet, and DHHS

HIT and HIE have similar goals and many efforts for HIT are related to and impact HIE. CMS has provided the state with guidance on the importance of coordinating statewide HIE and HIT efforts. On the federal level, ONC has been coordinating with CMS to ensure that efforts are streamlined and collaborative rather than duplicative. DHHS is working closely with the State HIT Coordinator to ensure the coordination of HIT efforts, specifically the SMHP.

The State HIT Coordinator acts as the conduit to coordinate all HIT/HIE activities throughout the state. The State HIT Coordinator collaborates regularly with the SMHP project manager and team. The State HIT Coordinator attends status meetings and other key project presentations relevant to SMHP efforts. The State HIT Coordinator is also involved in reviewing documentation and project materials. The State HIT Coordinator works closely with HealthInfoNet to coordinate all statewide HIE efforts and facilitates status updates between state-level HIE efforts and SMHP efforts. Coordination through the State HIT Coordinator helps assure that the State Medicaid HIT Plan is consistent with the State-level HIT plan.

DHHS is involved in the state-wide effort by representation on two state-level HIE and HIT committees. The Director of MaineCare Services and the Director of Maine CDC are members of the Health Information Technology Steering Committee (HITSC) and the Commissioner of DHHS, the MaineCare Medical Director, and the Director of Maine CDC are board members on the HealthInfoNet Board. The MaineCare Medical Director also chairs the Technical and Professional Practice Advisory Committee, one of the HIN Standing Committees.

VERMONT

Governance Structure for the Next Five Years for HIT/E Goals and Objectives

Governance Considerations - Five Year View

Vermont is well positioned to implement a good governance structure for the EHR Incentive Program as it evolves. The specific elements needed for EHRIP governance will be a subset of many of the governance elements already in place. Vermont’s history with healthcare reform has led to the development of several governance components that have been established before the passage of both the ARRA-HITECH and ACA acts. Even though these specific opportunities were not anticipated in the development of some of these governance components, Vermont is now in a favorable position with respect to governance.
Enabling legislation provides the authorization for governance of healthcare reform in Vermont. It establishes the organizational responsibilities and authorities and also specifies objectives, measurements, and reporting requirements, in addition to providing the necessary funding mechanisms. A lead organization – The Department of Vermont Health Access – is the organizational center of healthcare governance for the state. DVHA takes the lead in negotiating and managing contracts for significant healthcare components, including the HIE, the REC, and a supporting data repository. DVHA, through the Division of Health Care Reform, also takes the project management lead in the major IT activity, including a Core Components project establishing a SOA-based infrastructure, an MMIS replacement project, an eligibility system replacement project, Vermont’s participation in the MAPIR project, and the development of a Provider Directory for Vermont.

It is significant to note that DVHA also serves as the State Medicaid Agency for Vermont. Having the Division of Healthcare Reform embedded in DVHA provides an organizational (and in our case – a co-located) cohesion between existing SMA functions (administrative, business office, data services, oversight, auditing, privacy and security) and the requirements of new programs such as EHRIP. DVHA’s dual roles of Medicaid administration and Healthcare Reform allow for and requires frequent contact, discussion and planning with other healthcare related activities in the State, including the Vermont Department of Health and the State Agency responsible for insurance oversight and the development of Vermont’s Insurance Exchange (BISHCA – Department of Banking, Insurance, Securities & Health Care Administration).

This overview of Healthcare Governance in Vermont is expanded on below. Vermont’s State HIT Plan, recently approved by ONC and CMS, included a complete description of governance as related to the HIE. That description is incorporated into the Section A “As-Is” portion of this document, specifically in items 5 and 7 of that Section. Important to note from that description are these points:

- **Vermont has a collaborative Governance Model**
  - VITL has a pivotal role in Vermont’s healthcare reform activities, as both HIE operator and our single REC. VITL’s formation was marked by substantial stakeholder involvement, which is still reflected in the composition of VITL’s board representation of government, consumer, and stakeholder interests. Policy coordination and oversight is placed with the state, led by the State Government HIT Coordinator. Vermont’s governance structure reflects and integrates with the federal HIT/E policy structure enacted in the HITECH Act. Vermont’s Act 61 requires the state to produce and annually update a state HIT Plan that mirrors the requirements and process placed on ONC for the federal HIT Plan.

- **State HIT Coordinator**
  - The State HIT Coordinator is directly accountable to the Governor and the General Assembly and is responsible for coordinating and convening multi-disciplinary input from broad HIT and HIE stakeholders. The Coordinator is also responsible for ensuring alignment and collaboration with ARRA funded programs across state government. The role of the HIT Coordinator is further described in Section A of this document. That description includes a brief discussion of staffing for this effort.

- **Accountability and Transparency**
  - Accountability, transparency, and engagement with the public is a longstanding Vermont tradition and is codified in Section 8 of Act 61 of 2009, which requires that the state shall consult with and consider the recommendations of a number of specifically identified stakeholders (see Section A for a full listing).
• Public Engagement, Communication, & Outreach
  o Significant outreach occurred in the development of Vermont’s HIE and the establishment of VITL. Broad consumer engagement since then has been limited as attention was focused on the early implementation efforts of the HIE. With new ARRA resources, as well as state and federal health reform initiatives, particularly the statewide expansion activities of the Blueprint for Health, Vermont is now positioned to initiate a major consumer outreach campaign. The outline of such a campaign is described in Section A of this document.

• Financial Sustainability
  o Per 32 V.S.A. chapter 241 § 10301, Vermont collects a fee (2/10ths of 1%) on all health insurance claims that generates annual revenues for the state Health IT Fund which then provides grants to support HIT and HIE. While the Fund sunsets in 2015, it will provide substantial capacity to match federal funds available through both ONC and CMS to provide for the statewide build out of the HIE infrastructure. Further discussion of this topic is in Section A of this document.

• Legal/Policy
  o Privacy and Security – VITL developed a set of six privacy and security policies to govern the operation of the HIE. These policies are consistent with federal and state laws and regulations, and reflect the privacy principles in the HHS Privacy and Security Framework. The State HIT Coordinator is convening a new Privacy & Security Work Group to establish a continuous improvement process for existing policies. Further discussion of this topic is included in Section A of this document. However, for this “To-Be” Section of the document, we note that preliminary issues on the docket for this Work Group over the coming year include:
    1. 42 CFR Part 2 and recent SAMHSA FAQ on same that requires adjustment to current policy related to exchange of alcohol and substance abuse records;
    2. Discussion about exchange of minors’ health information (particularly because of the different approaches our neighboring states have taken);
    3. Restriction on the exchange of information from self-pay encounters (raised by sections of the HITECH Act);
    4. The federal Data Use and Reciprocal Support Agreement (DURSA) for use with the National Health Information Network; and
    5. Closely related to 4, the general subject of interstate HIE and cross-border issues that arise from differing state privacy and security policies and legislation.

Process steps for the Work Group include:
  1. Identifying members through solicitation at the HIT/E Stakeholders monthly meetings, via the HIT Coordinator’s regular e-Updates, and direct outreach to stakeholder groups and interested parties;
  2. Convening the first meeting before year end;
  3. Hiring a State Privacy Specialist;
  4. Conducting monthly meetings;
  5. Making recommendations to the State HIT Coordinator and DVHA Commissioner (as needed based on meeting outcomes, with reporting to the commissioner and Stakeholders via State HIT Coordinator’s e-Updates quarterly);
  6. Developing potential legislation;
7. Introducing legislation, if any;
8. Continuing monthly (or possibly bi-monthly meetings) as needed for at least the next two years.

Planning elements related to Privacy and Security include:
1. Coordinate adoption of privacy and security policies and procedures with all health systems in the state as part of HIE deployment;
2. Create easily understood material to support opt-in consent procedures required by state law;
3. Work with neighboring states to facilitate interstate HIE in conformance with state laws;
4. Create limited service position at DVHA with responsibility for oversight of HIE Privacy & Security policies and staffing of the state Privacy & Security Work Group.

- State Laws – The process to develop HIE Privacy and security policies included a legal review of all applicable state laws. Policies were written to ensure compliance. Because Vermont’s privacy law is more strict than HIPAA, it was determined that Vermont must use an opt-in model for HIE. That model is reflected in the policy on patient consent. At this time, there are no plans to modify state laws. Comments on Vermont’s efforts to work with neighboring states and to remain consistent with federal developments on privacy and security are included in the governance discussion in Section A of this document.

- Policies and Procedures – As mentioned, VITL’s board of directors has adopted a comprehensive set of six privacy and security policies and agreement, including: 1) Policy on Participating Health Care Provider Policies and Procedures for the VHIEN, 2) Policy on Patient Consent to Opt-In to VHIEN, 3) Policy on Secondary Use of Identifiable PHI on VHIEN, 4) Policy on Information Security, 5) Policy on Privacy and Security Events, and 6) Policy on Auditing and Access Monitoring. The policies are currently in use by hospitals in multiple Vermont hospital service areas as models for HIE among providers in those communities and will be deployed statewide as the VHIEN is built out in calendar 2010. A set of model policies and agreements is part of the “implementation toolkit” provided to all practices and institutions working with VITL. These policies, including proposed revisions to the Secondary Use policy (currently open to public comment) are included in Appendix XXXXXXXX.

- Trust Agreements – From the beginning the Vermont HIE Network has required that business associate agreements and contract terms be signed with each participating organization. In fact, technical work does not begin on an interface or other project until the agreements have been signed by all parties. These agreements spell out in detail how data is to be used between organizations. Our plan is to leverage current agreements to facilitate statewide expansion and work with counterparts in adjoining states to develop agreements in conformance with other state law, policies, and procedures.

- Oversight of Information Exchange and Enforcement

- Vermont statute 18 V.S.A. chapter 219 § 9351 (f) requires that Vermont HIT and HIE programs “shall be consistent with the goals outlined in the strategic plan developed by the Office of the National Coordinator for Health Information Technology and the statewide health information technology plan.” In the event that providers, individuals, or other entities are not compliant with state and federal policy, the state has the option to pursue enforcement. Act 61, enacted during the 2009 legislative session, provides several compliance mechanisms including:
  - Sec. 5. 18 V.S.A. § 9437 gives the commissioner of Banking, Insurance, Securities, and Health Care Administration the authority to require that the Certificate of Need (CON) application for a large hospital HIT project “conforms with the health information technology plan established under section 903 of Title 22….”;
- Sec. § 9352 authorizes VITL to require that Health Information Technology systems acquired under a VITL grant or loan comply with data standards for interoperability adopted by VITL and the state health information technology plan;
- Sec. § 9352 also authorizes VITL, following federal guidelines and state policies, if enacted, to certify the meaningful use of health information technology and electronic health records by health care providers licensed in Vermont. Without meaningful use certification, providers will not qualify for the Medicaid incentives created in the ARRA/HITECH act.
  - The VHIEN privacy and security policies contain a procedure for dealing with individuals and organizations that are not compliant with the policies. Sanctions may include permanent exclusion from participating in the VHIEN. The legal analysis does note that in the event that an individual has a compliant relating to the use or disclosure of his or her protected health information, a professional grievance against the health care provider or facility responsible may be submitted for review by the licensing authority of that provider or facility. The analysis also points out that “The Secretary of the US Department of Health and Human Services also has the authority to impose civil monetary penalties as set forth in 45 CFR §160.404 as amended by HITECH Act § 13410 and which extends enforcement to State Attorneys General.”
