How to identify a Green Crab

(Carcinus maenas)

- Set of five trianger spines on each side of shell (carapace).
- Three rounded lobes (bumps) between the eyes.
- Last pair of legs somewhat flattened.
- Not always green, color may vary

Other similar Crabs:

Asian Shore Crab

(Hemigrapsus sanguineus)

- Small hard bubble at the crux of its claws
- Three spines along each side of its shell
- Light-and-dark banding pattern on its legs.

Rock (peekytoe) Crab (Cancer irroratus)

Nine smooth marginal "teeth" on each side of shell, carapace is smooth.

Jonah Crab (Cancer borealis)

Jagged marginal teeth, carapace is rough

Toad Crab (Hyas araneus)

Shell is narrow and triangular, legs are long an spindly (resemble a spider), shell often decorated or camouflaged with plants and animals

Three Points on both sides of carapace

Banding on appendages
