Location: Tidal Impoundment in Smelt Brook, Dyer Bay, Steuben, Washington County, Maine

<u>Purpose</u>: Standard lease for suspended culture of American/Eastern Oysters (*Crassostrea virginica*)

Site Review: Meryl Grady and Geoffrey Shook Report Preparation: Meryl Grady and Amanda Ellis

PAGE 1 APRIL 23, 2024

<sup>&</sup>lt;sup>1</sup> Unless otherwise noted, all figures in this report were created in ArcGIS Pro version 2.9 using digitized NOAA Nautical Charts or georeferenced aerial photographs provided by The Maine Office of GIS.

#### **Application Overview**

The applicant, Arnold Francis, is requesting a 3.57<sup>2</sup> acre standard lease in Dyer Bay, Steuben for the suspended culture of American/Eastern oysters (*Crassostrea virginica*). The proposed lease is located within a tidal impoundment which is owned and operated by the applicant.<sup>3</sup> The applicant currently operates experimental lease DYER SBx within the footprint of this standard lease proposal (Figure 4).

#### **General Characteristics**

On August 23, 2023, Maine Department of Marine Resources (MDMR) scientists assessed the proposed lease site. MDMR scientists arrived on site at approximately 11:37 AM. The surrounding uplands consist of undeveloped forest.

#### **Depth**

On August 23, 2023, MDMR scientists began collecting depths at the proposed site at 11:40 AM, approximately 1.5 hours after low tide (Table 1). At the time of the site visit, recorded depths were between 3.6 and 5.2 feet (Figure 2). The proposal is located entirely within a tidal impoundment that is operated and maintained by the applicant. Therefore, water depths inside the impoundment are partially a function of tide gate management and the local tide stage. According to the applicant, the average depth within the impoundment at mean low water (MLW) is five feet. At mean high water (MHW), the depths are approximately 12 feet. If the tidal gate was opened, a portion of the proposed lease site would be above MLW, and therefore intertidal. <sup>4</sup>

**Table 1.** Predicted tidal heights in Milbridge, Maine.<sup>5</sup>

Date	Time	Height (ft)
2023/08/23	3:59 AM	10.5 H
2023/08/23	10:25 AM	1.9 L
2023/08/23	4:18 PM	11.2 H
2023/08/23	11:03 PM	1.4 H

#### **Bottom Characteristics**

MDMR scientists observed the bottom characteristics of the proposed lease site via a remotely operated vehicle (ROV). Bottom characteristics were categorized using the Coastal and Marine Ecological Classification Standard (CMECS), a national standard for describing features of the marine environment (Table 2). Sediment information was determined based on visual analysis of the video. The bottom of the proposed lease site is primarily composed of mud, gravel, and shell rubble.

PAGE 2 APRIL 23, 2024

<sup>&</sup>lt;sup>2</sup> Applicant originally requested 3.56 acres. MDMR calculations indicate the area is 3.57 acres.

#### **Position and Distances to Shore**

The measuring tool in ArcGIS Pro 2.9 was used to verify the distances and bearings between proposed lease corners. Distances to shore were determined using the measuring tool in ArcGIS Pro 2.9, digital orthophotography provided by the Maine Office of GIS, and the application coordinates (Table 3, Figure 2).

#### Application Coordinates (WGS84) – 3.57 Acres

Corner	<u>Latitude</u>	<u>Longitude</u>	
NW	44.460661°	-67.899953°	then 231.0 feet at 93° True to
NE	44.460625°	-67.899069°	then 469.7 feet at 191° True to
INE	44.459358°	-67.899397°	then 27.0 feet at 221° True to
ISE	44.459300°	-67.899461°	then 274.0 feet at 188° True to
SE	44.458556°	-67.899606°	then 336.3 feet at 302° True to
SW	44.459042°	-67.900700°	then 261.0 feet at 41° True to
IW	44.459575°	-67.900033°	then 369.5 feet at 3° True to NW

**Table 3.** Approximate distances from proposed lease corners to surrounding features (Figure 2).

Feature	Distance
NW corner to nearest point at MHW	~15 feet to the north
NE corner to nearest point at MHW	~18 feet to the northwest
SE corner to nearest point at MHW	~15 feet to the southeast
SW corner to pound infrastructure	~15 feet to the south
IW corner to nearest point at MHW	~50 feet to the west

Tidal Impoundment in Smelt Brook, Dyer Bay

Steuben

**Arnold Francis** 

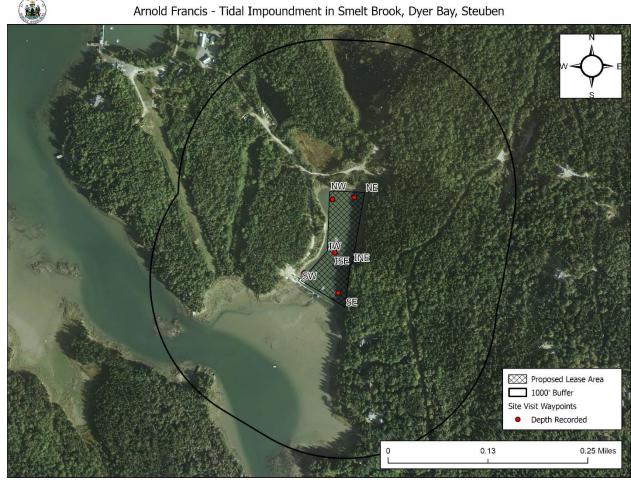

Figure 2. Proposed lease area with site visit observations.

Pursuant to statute and regulation, aquaculture leases are evaluated in consideration of applicable decision criteria. The site report documents MDMR's observations of the area and other information, in consideration of those criteria, as noted below:

#### (1) **Riparian Ingress and Egress**

During the site visit on August 23, 2023, MDMR observed a wooden float inside the impoundment near the proposed SW corner. The float was attached to the impoundment structure and appeared to be associated with the current experimental lease in operation, DYER SBx. Additionally, located near the SW corner, there was a boat ramp with access to the pound. Due to the intertidal location of the proposal, the applicant is required to obtain written consent from the upland owner for use of their intertidal land. However, the applicant owns all the surrounding upland property.

PAGE 4 APRIL 23, 2024

# (2) Navigation

The proposal is located in a tidal impoundment owned and operated by the applicant and surrounded by property owned by the applicant. There is no public boat access to the impoundment.

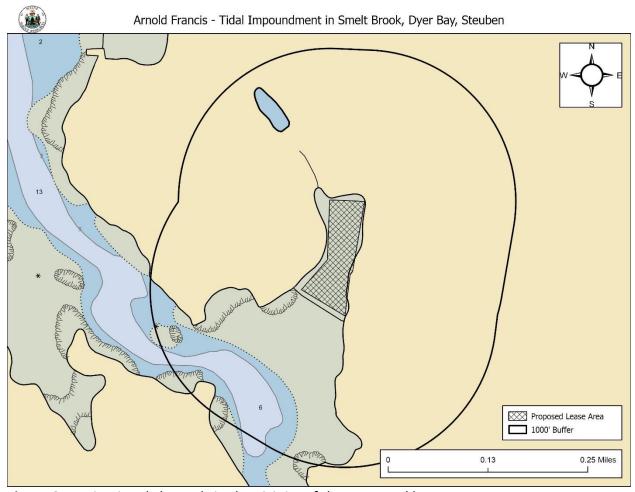

Figure 3. Navigational channels in the vicinity of the proposed lease area.

#### (3) Fishing and Other Uses

MDMR did not observe any fishing activity within the impoundment during the site assessment. No fishing activity is expected to occur within the impoundment, except as authorized by the applicant, since the applicant owns and operates the impoundment and surrounding property.

PAGE 5 APRIL 23, 2024

The Town of Steuben has a shellfish conservation program in accordance with 12 M.R.S.A. § 6671 and because the site is located within the intertidal, the applicant is required to obtain consent from the municipality. The applicant provided this permission with the application.<sup>6</sup>

#### (4) Other Aquaculture Uses

The applicant currently operates experimental lease DYER SBx within the boundaries of this proposal. This standard lease proposal is intended to replace DYER SBx. One Limited Purpose Aquaculture (LPA) license, DTIL 521, is located within the boundaries of the proposed lease site (Figure 4).

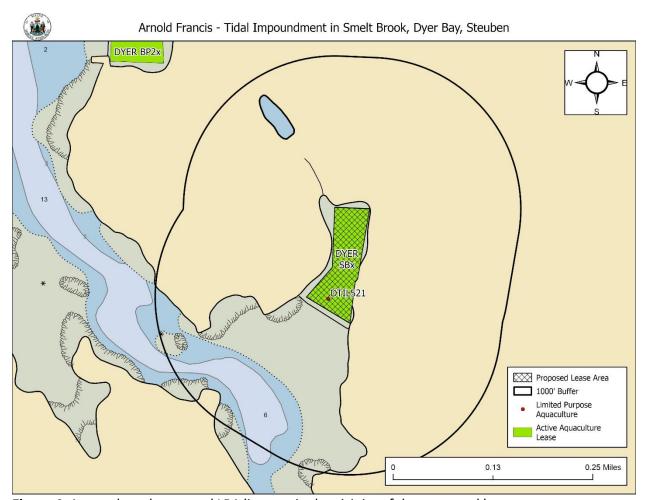

Figure 4. Aquaculture leases and LPA licenses in the vicinity of the proposed lease area.

<sup>&</sup>lt;sup>6</sup> Application page 23 and 32

## (5) Existing System Support

### **Epibenthic Flora and Fauna**

MDMR scientists utilized an ROV to assess the epibenthic ecology of the proposed lease. The relative abundance of epibenthic flora and fauna observed in the video transects is described below in Table 4.

**Table 4.** Species observed using underwater camera footage.

Species Observed	Abundance
Mud shrimp (Crangon sp.)	Occasional
European Green Crab (Carcinus maenas)	Common
Rockweed (Ascophyllum nodosum)	Occasional

#### Eelgrass (Zostera marina)

Historical records of eelgrass collected by MDMR in 2010 indicate no mapped eelgrass presence within the boundaries of the proposal. The nearest mapped eelgrass is approximately 433 feet southwest of the SW corner of the proposal, separated by the impoundment structure (Figure 5).<sup>7</sup> No eelgrass was observed within the proposal boundaries during MDMR's site assessment.

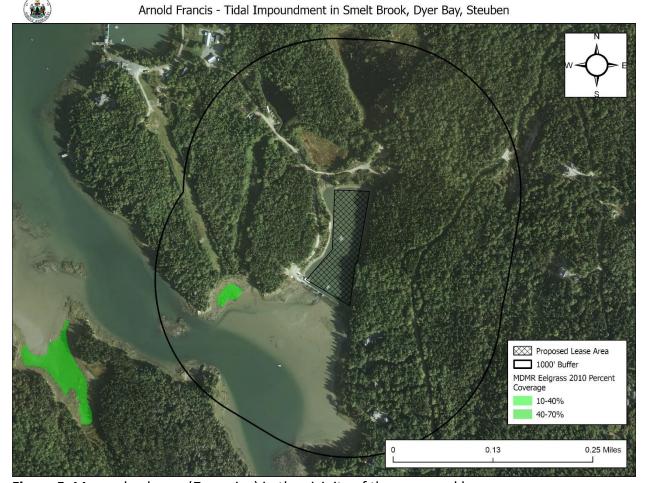

PAGE 7 APRIL 23, 2024

<sup>&</sup>lt;sup>7</sup> Data obtained from The Maine Office of GIS "GISVIEW.MEDMR.Eelgrass". This is the most current record of mapped eelgrass in the vicinity of the proposal.

Steuben

**Figure 5.** Mapped eelgrass (*Z. marina*) in the vicinity of the proposed lease area.

#### Wildlife

During the site assessment, MDMR scientists observed double-crested cormorant (Nannopterum auritum), sandpiper (Scolopacidae family), and belted kingfisher (Megaceryle alcyon) in the general vicinity of the proposal. According to Geographic Information System (GIS) data maintained by the Maine Department of Inland Fisheries and Wildlife (MDIFW) and available through the Maine Office of GIS (MEGIS), the proposed lease is located approximately 60 feet to the northeast of mapped Tidal Waterfowl and Wading Bird Habitat. Data collected by the United States Fish and Wildlife Service in 2022 by aerial nest survey shows the closest mapped bald eagle nesting site to be approximately 3,300 feet southwest of the proposal (Figure 6).

PAGE 8 APRIL 23, 2024 On August 22, 2022, a Wildlife Biologist with MDIFW responded by email to a "Request for Agency Review and Comment", stating that minimal impacts to wildlife are anticipated.<sup>8</sup>

<sup>&</sup>lt;sup>9</sup> Data obtained from USFWS "Bald\_Eagle\_Nests\_-\_Maine\_2023" and MDIFW maintained SDE Feature Class "GISVIEW.MEIFW.Twwh"

#### (6) Interference with Public Facilities

The proposed lease is not within 1,000 feet of any beach, park, or docking facility owned by federal, state, or municipal governments. The nearest conserved land is 470 feet southeast of the proposal and held in private conservation by the Downeast Coastal Conservancy. The nearest publicly owned conserved land, Maine Coastal Islands (Petit Manan) National Wildlife Refuge, is 835 feet southwest of the proposal (Figure 7).

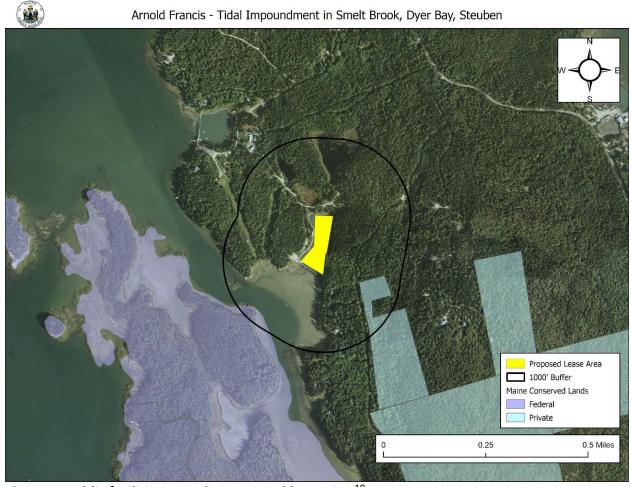

Figure 7. Public facilities near the proposed lease site. 10

### (7) Water Quality

The proposed lease is currently located within an area classified as Approved by the MDMR Bureau of Public Health and Aquaculture.
