# New Application Roll out Plan

Name of Application:

List the required skills students will need to be successful with the application:

1 — How will you engage students*?

2 — In what order will the skills be introduced?

3 — What will students do to practice the introduced skill?

4 — What will the practice project be?

5 — How will you give feedback on students' practice work?

*A good way to engage students is to show them the finished product you created when you practiced.

Roll Out Reflection

After the roll out is complete and students have completed their practice project take a few moments to reflect on the process. This will help with the next application you roll out to students.

- What did you find students struggled with when they worked independently on their

  practice project?

- Was the struggle with their skills on the application? If so, could it have been prevented?

- Do you have any general reflections on the process that you would like to remember for

  next time?
