

Erosion Experiment Procedure

1. Set up a landscape with sand and rocks in the stream table.
2. Create a slope by placing a block under the side of the stream table without the hole.
3. In the **Before** box of your Erosion Experiment sheet, draw the sand and rocks.
4. On your drawing, mark an **x** on the end that is elevated.
5. On your drawing, draw an arrow to show where the water will start.
6. Gently pour water into the landscape. Watch what happens.
7. In the **After** box of your Erosion Experiment sheet, draw arrows to show the direction the water flowed.
8. In your drawing, draw how the sand, rocks, and water look now.
