

The Trends in International Mathematics and Science Study (TIMSS; formerly known as the Third International Mathematics and Science Study) is a study of classrooms across the country and around the world. TIMSS provides trend data on students' mathematics and science achievement from an international perspective. Through participation in TIMSS, the United States has gained reliable and timely data on the mathematics and science achievement of our students compared to that of students in other countries. TIMSS is the longest ongoing international student assessment. Since 1995, TIMSS has measured trends in academic achievement at grades 4 and 8 in more than 60 countries around the world, including the United States. Results from these assessments are used by researchers and policymakers to chart national progress against international standards and other countries around the world, informing national discussions about international competitiveness. In 2019, TIMSS transitioned to digital administration.
