## Calculating the EPS Transportation Cost Component for SAUs:

SAU information needed:

- Resident Pupils (October 2003, and most recent calendar year average)
- Miles of Road (Class 1 through Class 5)
- One-way travel distance from high school to nearest vocational education facility
- Actual miles driven to out-of-district special education programs (most recent year)
- Actual ferry costs (most recent year) ${ }^{1}$
- Actual cost of transporting homeless students to or from outside the district (most recent year)
- Actual Net Transportation Operating Expense (most recent year)

## Note:

- Not to be used for island SAUs
- Not to be used for Non-K-12 CSDs or their members

Step 1: Calculate the SAU pupil density by dividing the October 2003 resident pupils by the miles of road.

Step 2: The predicted per-pupil base ( $p p p b$ ), which excludes vocational transportation, depends on the pupil density. Find an approximate amount by looking on Table 1. An exact amount may be found using the following formula: pppb $=\$ 345.00+\$ 224.32 \div$ pupil density $-\$ 2.432$ $\times$ pupil density.

Step 3: Calculate the per-pupil base cost by taking 110\% of the predicted per-pupil base.
Step 4: Calculate adjustments as follows:
Note: for 2005-06, the base amount will be adjusted for vocational transportation only, as data for the other adjustments listed have not been collected. Adjustments in the other areas will be added to the 2006-07 transportation cost component.
A. Vocational Transportation: For SAUs that transport students to vocational education facilities, the total vocational adjustment depends on the one-way travel distance from the high school to the nearest vocational education facility. Find an approximate amount looking on Table 2. An exact amount may be found using the following formula: $\$ 2.53 \times 4 \times 175 \times$ the one-way travel distance from high school to nearest vocational education facility, where $\$ 2.53$ represents the state average operating expenditure per mile driven, 4 represents two round trips per day, and 175 represents the assumed number of days of operation of the vocational facility.
B. Special Needs Transportation: the total special needs transportation adjustment is equal to the actual miles driven to out-of-district special education programs multiplied by the state average operating expenditure cost per mile driven (\$2.53 in 2003-04).

[^0]C. Ferry Costs: The total ferry cost adjustment is equal to actual ferry costs in the most recent year.
D. Homeless Students: The total homeless student adjustment is equal to the actual cost of transporting homeless students to or from outside the district in the most recent year.

Step 5: Calculate the per-pupil adjustment by dividing the total of all adjustments calculated in Step 4 by the resident pupils.

Step 5: Calculate the per-pupil adjusted cost by adding the per-pupil adjustment to the per-pupil base cost.

Step 6: Calculate the upper and lower limits by multiplying the actual per-pupil net transportation operating expense by $110 \%$ and by $75 \%$, respectively. For SADs and CSDs with resident enrollment higher than 1,250 , calculate the lower limit by multiplying the actual net transportation operating expense by $90 \%$ rather than $75 \%$.

Step 7: Determine the EPS per-pupil transportation rate as follows:

- If the per-pupil adjusted cost is between the upper and lower limits, then the EPS perpupil transportation rate equals the per-pupil adjusted cost.
- If the per-pupil adjusted cost is greater than the upper limit, then the EPS per-pupil transportation rate equals the upper limit (i.e., $110 \%$ of actual).
- If the per-pupil adjusted cost is less than the lower limit, then the EPS per-pupil transportation rate equals the lower limit (i.e., 75\% of actual).

Step 8: Calculate the total transportation allocation by multiplying the EPS per-pupil transportation rate by the most recent calendar year average resident pupils and adjusting for inflation to the funding year.

Note: for 2005-06, the base amount will be adjusted for vocational transportation only, as data for the other adjustments listed have not been collected. Adjustments in the other areas will be added to the 2006-07 transportation cost component.

Table 1: EPS Per-Pupil Transportation Base Cost
Selected Values by SAU Pupil Density

| Pupil <br> Density | Per- <br> Pupil <br> Base <br> Cost | Pupil Density | Per- <br> Pupil <br> Base <br> Cost | Pupil Density | Per- <br> Pupil <br> Base <br> Cost | Pupil <br> Density | Per- <br> Pupil <br> Base <br> Cost |
