BENDS AND BANDS for A.C.C.M.P. MEDIAN DRAINAGE

DRAINAGE SECTION

DETAIL OF SIX-FOOT BENDS

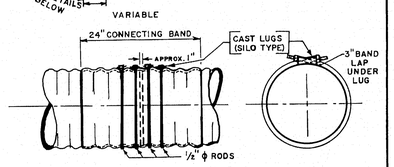

NOTE: 24" CONNECTING BANDS SHALL BE USED ON THE ENDS OF EACH ANGLE SECTION. THESE BANDS SHALL BE WATER TIGHT AND DRAWN SECURE BY MEANS OF FOUR THREADED GALVANIZED RODS 1/2" ROUND, PLACED UNIFORMLY EACH SIDE OF THE PIPE ENDS, AND TIGHTENED WITH SILO TYPE LUGS. THE LONGITUDINAL SEAM UNDER THE COLLAR SHALL BE WELDED AND RIVETS OMITTED.

WHEN STRAIGHT LENGTH OF A.C.C.M.P ON SLOPE EXCEEDS 20 FEET, 24" BAND OR BANDS SHALL BE USED IN THE SAME MANNER AS DESCRIBED ABOVE.

AN ITEM COVERING EACH SIZE OF 24" CONNECTING BANDS SHALL BE INCLUDED IN THE PROPOSAL.

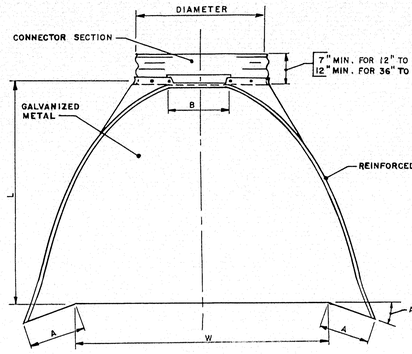

BID ITEMS FOR 15", 18" & 24" A.C.C.M.P. SIX FOOT SECTION TO FORM 25° ANGLE SHALL BE SHOWN IN THE ITEM DESCRIPTION AS "SIX FOOT BENDS".

WHEN FILL IS 10' OR MORE IN DEPTH AT THE OUTSIDE SHOULDER BERM USE OUTLET FROM CATCH BASIN AS SHOWN; WHEN FILL IS LESS THAN 10' USE STRAIGHT GRADE LINE FROM CATCH BASIN TO OUTLET END OF PIPE.

DETAIL OF 24" CONNECTING BANDS

METAL ENDWALLS

PLAN

Scale : 3/4" = 1'

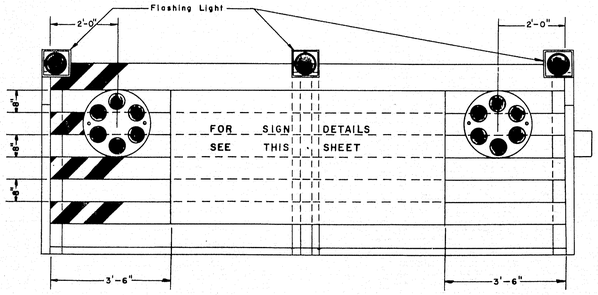

DETOUR SIGN FOR
PORTABLE BARRICADE

Scale : 1/2" = 1'

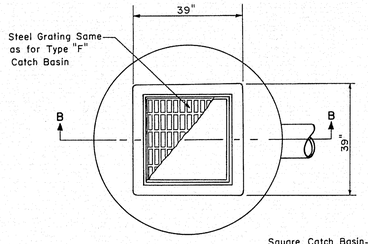

GENERAL NOTES :

1. Lumber sizes for use on Barricades shall be 2"x 8" except for Posts which shall be 4"x 4".
2. Detour Sign shall be 5/8" thick plywood.
3. Alternate 6" stripes shall be painted or screened in black on a background of silver reflective sheeting.
4. The word "DETOUR" and Arrow shall be painted or screened in black on a background of yellow reflective sheeting.
5. Flashing Lights shall be Mounted to permit rotation to face oncoming traffic.
6. Reflector clusters shall consist of a red background with red Reflectors similar to AGA Designation #1816 – A1 (PDON).
7. The Barricades shall be securely anchored in place by means of sandbags, weights, or large stones.
8. Location of Service and Meter to be determined after Power Source has been decided.

NOTES:

1. Subsurface data were supplied by the Maine State Highway Commission during the period of July-August 1958.

2. Subsurface investigations were taken for the purpose of design and show conditions at test points only. They do not necessarily show the nature of materials to be encountered during construction.

3. The contractor is to form his own opinion of the character of the material, and is to make his own interpretation of subsurface data. The Engineer does not warrent the findings as being accurate or complete.

GENERAL NOTES

FOUNDATION:

Foundations may be altered, if necessary, to suit conditions encountered in construction.

DESIGN:

In accordance with the Specifications of the American Association of State Highway Officials for H20-S16-44 loading (1957 Edition) and as modified for military requirements.

Design Stresses: Structural Steel f_s = 18,000 psi.
Reinforcing Steel f_s = 18,000 psi.
Concrete (n=10) f_c = 1,200 psi.

CONSTRUCTION:

State of Maine Standard Specifications to be followed except as noted in Special Provisions.

REINFORCEMENT:

All bars shall have deformations conforming to A.S.T.M. Designation A305. Unless otherwise shown on plans, reinforcing bars shall be lapped 20 diameters to make a splice except that main reinforcing bars near the top of slabs and beams having more than 12" of concrete under the bars shall be lapped 36 diameters to make a splice.

STRUCTURAL STEEL:

Wherever cover plate and/or shear connectors are welded to beams, beams and plates shall be weldable structural steel A.S.T.M. Designation A 373.

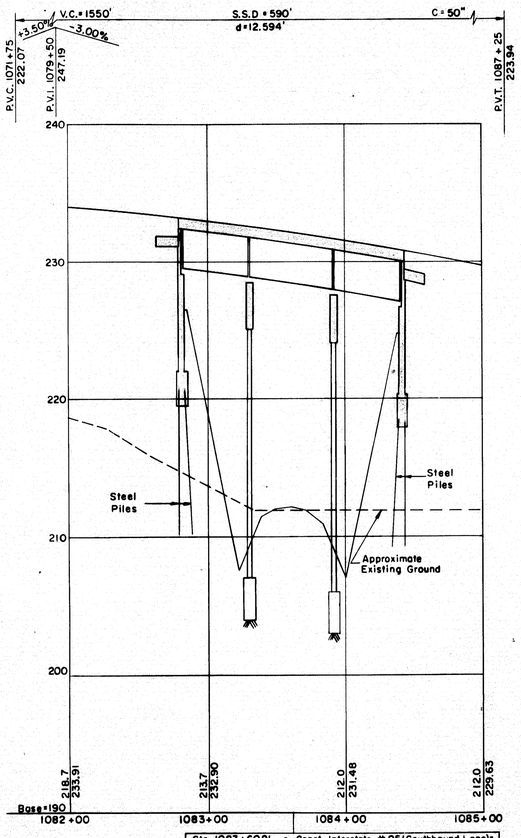

BENCH MARK:

Elevation	Depth in Feet	No. of Blows
PB-41		
213.7		
203.8	Refusal	
PB-42		
212.5		
199.8	Refusal	

BORING LOG

Scale 1/8" = 1'-0"

GENERAL ELEVATION

Scale: 1" = 10'-0"

NOTES:

1. Location of borings are shown on Key Plan thus ◉ B-35
   Punchings are shown on Key Plan thus ◉ PB-41
2. Borings and punchings are taken for the purpose of design and show condition at boring and punching points only, but do not necessarily show nature of materials to be encountered during construction.
3. Figures in boring columns indicate blows per foot on 2½"casing or 1" spoon produced by a 310 lb hammer with a fall of 16" and 14" respectively.
4. Punchings were driven to refusal surface using A rods and 60 # hammer.
5. Borings and punchings were taken by the Maine State Highway Commission during the months of June, July, and August 1958
6. The Contractor is to form his own opinion of the character of the material, and to make his own interpretation of the borings and punchings.
7. The Engineer does not warrant the findings as being accurate or complete.

PLAN NORTHEASTERLY ABUTMENT

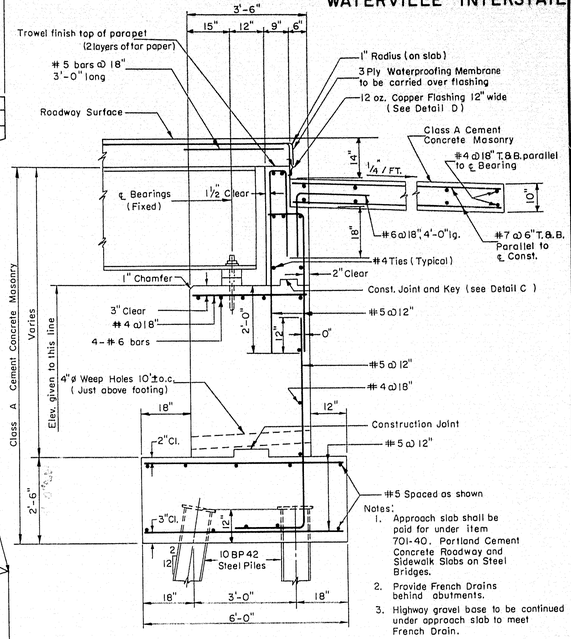

Scale: 3/16" = 1'-0"

Notes:
1. Embankment under abutment to be constructed to elevation of bottom of footing before piles are driven.
2. All piles to be driven to ledge or practical refusal.
3. All piles to be 10BP42 Steel Piles
4. Max. pile load 35 tons
5. Front piles to be battered 2" on 12"
6. Cap all piles (See Detail on Sheet 5)

PLAN NORTHWESTERLY ABUTMENT

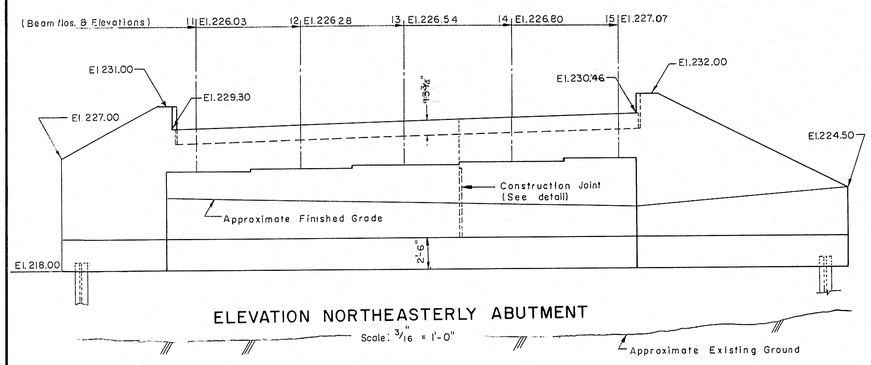

Scale: 3/16" = 1'-0"

Notes:
1. Approach slab shall be paid for under item 701-40, Portland Cement Concrete Roadway and Sidewalk Slabs on Steel Bridges.
2. Provide French Drains behind abutments.
3. Highway gravel base to be continued under approach slab to meet French Drain.

* Low station end of beam.

Note: After the structural steel is erected and before forms are built or concrete is placed, elevations on the top flange of the beams are to be obtained at the points indicated in the table. The difference between these elevations and those shown in the table give the actual blocking distance from top of beam to bottom of slab. See Haunch Detail.

NOTES:

1. All intermediate diaphragms to be 18 [42.7; for detail see sheet 9.
2. All end diaphragms to be 15 [33.9; for details see sheet 9.
3. For Cover Plate and Shear Connector details see sheet 9.
4. All beams to be cambered to the extent that the bridge deck under full dead load will follow as nearly as practicable the design profile, and in no case with less camber than is likely to remain permanent. The proposed camber diagram shall be submitted to the engineer for approval.
5. Parapets and safety walks to have transverse construction joints 20'± on centers. Joints are not to be located under railing post. Contact surfaces of joints to be painted with a bituminous material. Exposed surfaces are to be chamfered ½". Reinforcing steel to be carried thru joints.
6. All deck slab concrete in each span shall be placed in one continuous operation.
7. 3-Ply Membrane Waterproofing and Bituminous Concrete Surfacing are not in this contract.

TYPICAL BAR BENDS

NOTES

1. All dimensions are out to out of bar.
2. 'J' dimensions on 180° hooks to be shown only where necessary to restrict hook size, otherwise standard hooks are to be used.
3. Where 'J' is not shown, 'J' will be kept equal to or less than 'H'. Where 'J' can exceed 'H,' it should be shown.
4. 'H' dimension on stirrups to be shown where necessary to restrict hooks.
5. Where bars are to be bent more accurately than standard bending tolerances, bending dimensions which require closer working should have limits indicated.
6. Figures in circles show types.
7. No allowance for bend curvature is to be made except for standard hook & radii in excess of same.

TYPICAL BAR BENDS

NOTES

1. All dimensions are out to out of bar.
2. 'J' dimensions on 180° hooks to be shown only where necessary to restrict hook size, otherwise standard hooks are to be used.
3. Where 'J' is not shown, 'J' will be kept equal to or less than 'H'. Where 'J' can exceed 'H,' it should be shown.
4. 'H' dimension on stirrups to be shown where necessary to restrict hooks.
5. Where bars are to be bent more accurately than standard bending tolerances, bending dimensions which require closer working should have limits indicated.
6. Figures in circles show types.
7. No allowance for bend curvature is to be made except for standard hook & radii in excess of same.

STANDARD HOOK DETAIL

BAR SIZES

Equivalent Size	Present (Numbers)
1/4"ϕ	#2
3/8"ϕ	#3
1/2"ϕ	#4
5/8"ϕ	#5

TYPICAL BAR BENDS

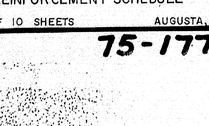

NOTES

1. All dimensions are out to out of bar.
2. 'J' dimensions on 180° hooks to be shown only where necessary to restrict hook size, otherwise standard hooks are to be used.
3. Where 'J' is not shown, 'J' will be kept equal to or less than 'H'. Where 'J' can exceed 'H' it should be shown.
4. 'H' dimension on stirrups to be shown where necessary to restrict hooks.
5. Where bars are to be bent more accurately than standard bending tolerances, bending dimensions which require closer working should have limits indicated.
6. Figures in circles show types.
7. No allowance for bend curvature is to be made except for standard hook & radii in excess of same.

STANDARD HOOK DETAIL

BAR SIZES

Equivalent Size	Present (Numbers)
1/4"ϕ	#2
3/8"ϕ	#3
1/2"ϕ	#4
5/8"ϕ	#5
3/4"ϕ	#6
7/8"ϕ	#7
1"ϕ	#8
1 1/8"ϕ	#9
18"□	#10
16"□	#11

8. Bar reinforcement metal shall conform to the requirements of the Standard Specifications for new Billet-Steel Concrete Reinforcement Bars (Intermediate Grade) Serial Designation A.A.S.H.O. M31-48 or its latest revision. All bars shall be deformed to conform with A.S.T.M. Specifications A 305-49.
