State PIN: 016756.00
Amendment No. 2

David Bernhardt
COMMISSIONER

Dear Sir/Ms:

The following question has been received:

Question: The only elevation I can find is at the top of the pile. I cannot find a way to tie that elevation to the rest of the dimensions. The elevation is important to determine underwater work.

Response: The centerline of the top longitudinal brace is at EL 3.62. This elevation is for estimating underwater work only. The construction shall be done according to the dimensions on the plans.

Question: Do you want the tips welded on the pile prior to galvanizing?

Response: Welding the pile tips to the piles prior to galvanizing is optional.

Question: Are slotted holes allowed?

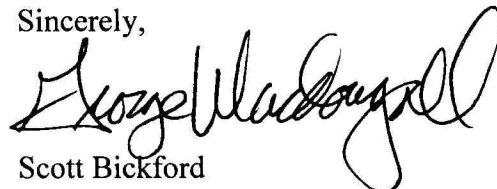

Response: Slotted holes are **not** permitted.

Question: Is the steel channel, plate, and angle material shown on sheets 5, 6 & 7 of 11 grade 50 or grade 36?

Response: All rolled sections shall be Grade 50 steel.

Consider this information prior to submitting your bid on June 29, 2011.

Sincerely,

Scott Bickford
Contracts & Specifications Engineer
