Janet T. Mills
GOVERNOR

Bruce A. Van Note
COMMISSIONER

July 1, 2025
Subject: Bridge Replacement
WIN: 022382.00
Location: **Cumberland-Yarmouth**
Amendment No. 2

Dear Sir/Ms.:

In the existing plans:

ADD the attached LED LIGHT FIXTURE DESIGN CALCULATIONS (21 pages).

The following questions have been received:

Question: (1)How does Maine DOT plan to install the Cyclone LEDs on the existing poles? Are there any specific mounting specifications?

Response: MainesDOT uses Stainless steel $\frac{3}{4}$ inch banding of a tenon. Light optics can fit in different fixtures so specific mounting instructions depend on the fixture selected.

Question (2)Does Maine DOT have the drawings and calculations for the existing lighting poles needed for the LFRD calculations? These calculations wouldn't be possible without those specifications.

Response: See the attached light fixture drawings and calculations.

Question (3)Please confirm that the outside housing of the LED fixtures will be grey.
Response: Light fixture housing will be gray.

Question (4) Will Maine DOT obligate the Cyclone crosswalk distribution fixtures before the nationwide BABA waiver for FHWA-funded projects expires on 10/1/2025?
Response: The contractor is encouraged to order the fixtures before the BABA waiver expiration.

Consider these changes and information prior to submitting your bid on **July 16, 2025.**

Sincerely,

A handwritten signature in blue ink, appearing to read "George Macdougall", is written over the printed name.

George M. A. Macdougall P.E.

SPECIFICATIONS

Performance Criteria

1. Double-Neck™ Pole-Safe® conforms to AASHTO 'Standard specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals.'
2. Double-Neck™ Pole-Safe® has been crash-tested and FHWA approved in accordance with the requirements of NCHRP Report 350, 'Recommended Procedures for the Safety Performance Evaluation of Highway Features.'
3. Maximum Allowable Pole Mass: 450 kg (992 LB.) (total, including fixtures).

Physical Properties per Coupling

1. Ultimate Tensile Strength = 221.5 kN (49.8 kips), minimum.
2. Tensile Yield Strength = 192.0 kN (43.2 kips), minimum.
3. Ultimate Restrained shear Strength = 24.5 kN (5.5 kips), minimum.

Corrosion Protection

1. All Double-Neck™ Pole-Safe® couplings, nuts, bolts, washers, and shims are galvanized after fabrication in accordance with ASTM A153.

INSTALLATION INSTRUCTIONS

1. Place 4 skirt panels around Pole-Safe Couplings using overlap configuration shown. All 4 sides of the skirt box should have 2 slots facing outside.
2. Thread 8 sheet metal screws through the outside slots into the closest corresponding holes in the adjacent inside panel.
3. Position panels snug against the Pole-Safe Couplings.
4. Tighten all 8 sheet metal screws

INSTALLATION PROCEDURE:

CAUTION:

IF THE DAMPENER IS FIELD INSTALLED THE POWER TO THE POLE SHOULD BE DISCONNECTED. TEMPORARY REMOVAL OF TERMINAL BLOCK AND FUSE ASSEMBLIES MAY BE REQUIRED. THE POLE SHOULD BE INSPECTED BY AN AUTHORIZED ELECTRICIAN AFTER THE INSTALLATION TO MAKE SURE THE DAMPENER IS NOT INTERFERING WITH THE WIRING AND ELECTRICAL COMPONENTS

1. INSERT ONE END OF THE DAMPENER INTO POLE FROM EITHER THE BOTTOM OF THE POLE OR THRU THE HANDHOLE
2. PUSH THE DAMPENER COMPLETELY INTO THE POLE (THE DAMPENER SHOULD LOOP FROM SIDE TO SIDE INSIDE OF THE POLE)
3. THE DAMPENER SHOULD REST ON THE FOUNDATION WHEN IT IS PROPERLY INSTALLED IN THE FIELD

POLYETHYLENE LOW DENSITY TUBING "A" LG (1 1/4 ID X 1 1/2 OD)

(2) GALVANIZED WIRE ROPE 3/8 (1X7) "A" LG

LOW DENSITY POLYETHYLENE TUBING TOTAL LENGTH MAY NOT EXCEED TWO PIECES (PIECES TO BE TAPED TOGETHER)

GALVANIZED WIRE ROPE TOTAL LENGTH MUST BE ONE PIECE
