PILE PLAN & STEEL LAYOUT
ABUTMENT No. 1

Piles 10" x 10" x 42#. Nine piles required.
Estimated pile lengths:
Five piles @ 20.0' E and South of E Construction.
Four piles @ 18.0' North of E Construction.
Maximum pile load 37 tons.
Piles shown thus  to be battered 2 1/2" per foot in the direction indicated by arrow.

SLOPE PAVING BLOCKS

SECTION A-A

Place reinforcing steel in bridge seats to clear anchor bolts.
Payment for Concrete End Posts and Rail Curbs on Abuts. will be made under item 701-33, Portland Cement Concrete Abutments and Retaining Walls. These portions of abutment to be Class A Concrete. Dress Bearing Areas, shown shaded, to exact elevations shown and 1" larger all around than bearing plate.

APPROACH SLAB, DRAIN DETAILS,
REINFORCING STEEL & RAIL POST
SHEET 17 OF 19 AUGUSTA, MAINE MAY 1958

BLOCKING DATA

Note: In order to compensate for "Dead Load Deflection", as well as inequalities in the "Rolled Camber" of the beams, the following procedure shall be used: After the beams are in position (with no load) the Engineer shall take elevations along the beams at points indicated. The difference between these elevations and the Elevation Bottom of Slab shall determine blocking to be used for constructing slab forms.
