SPECIFICATIONS

Design: Load and Resistance Factor Design per AASHTO LRFD Bridge Design Specifications, Tenth Edition 2024.

DESIGN LOADING

Live Load ..... HL - 93 Modified for Strength I

TRAFFIC DATA

Current (2023) AADT	360
Future (2043) AADT	400
DHV - % of AADT	11%
Design Hour Volume	44
Heavy Trucks (% of AADT)	10%
Heavy Trucks (% of DHV)	4%
Directional Distribution (% of DHV)	60%
18 kip Equivalent P 2.0	11
18 kip Equivalent P 2.5	10
Design Speed (mph)	25

HYDROLOGIC DATA

Drainage Area	40.39 sq mi
Design Discharge (Q50)	2595 cfs
Check Discharge (Q100)	2960 cfs
Headwater Elevation (Q1.1)	395.20 ft
Headwater Elevation (Q50)	400.70 ft
Headwater Elevation (Q100)	401.50 ft
Discharge Velocity (Q1.1)	5.2 fps
Discharge Velocity (Q50)	6.9 fps
Discharge Velocity (Q100)	6.8 fps

MATERIALS

Concrete:
- Deck, Curbs, Sidewalks, & Transition Barriers ..... Class "A1"
- All Other ..... Class "A"

Reinforcing:
- Plain Reinforcing Steel ..... ASTM A615, Grade 60
- Glass Fiber Reinforcing Polymer (GFRP) ..... ASTM D7957
- Low-Carbon Chromium Steel ..... ASTM A 1035, Type CS, Grade 100

Structural Steel:
- All Material (except as noted) ..... ASTM A709, Grade 50 (Galvanized or Metallized)
- High Strength Bolts ..... ASTM F3125, Grade A325, Type 1 (Galvanized)

BASIC DESIGN STRESSES

Concrete:
- Class "A" and Class "A1" ..... f 'c = 4,000 psi

Reinforcing:
- Plain Reinforcing Steel ..... f y = 60,000 psi
- Glass Fiber Reinforced Polymer
  - Minimum Tensile Strength ..... f fu = 100,000 psi
  - Minimum Elastic Modulus ..... E f = 8,700,000 psi
  - Minimum Nominal Design Tensile Strain ..... e fu = 1.1%
- Low-Carbon Chromium Steel ..... f y = 100,000 psi

Structural Steel:
- ASTM A709, Grade 50 ..... F y = 50,000 psi
- ASTM F3125, Grade A325 ..... F μ = 120,000 psi

BRIDGTON
CUMBERLAND COUNTY
CORNSHOP BRIDGE
OVER
STEVENS BROOK
DEPOT STREET
FEDERAL AID PROJECT NO. 2623600
PROJECT LENGTH 0.040 mi.

652.33	DRUM		20	EA
652.34	CONE		20	EA
652.35	CONSTRUCTION SIGNS		200	SF
652.361	MAINTENANCE OF TRAFFIC CONTROL DEVICES		1	LS
652.38	FLAGGERS		210	HR
656.75	TEMPORARY SOIL EROSION & WATER POLLUTION CONTROL		1	LS
659.10	MOBILIZATION		1	LS

GENERAL CONSTRUCTION NOTES

1. For easements, construction limits, and right of way lines, refer to the Right of Way Map.

2. The clearing limits as shown on the plans are approximate. The exact limits will be established in the field by the Resident. Payment for clearing will be considered incidental to Contract items.

3. All utility facilities shall be adjusted by the respective utilities unless otherwise noted.

4. Existing signs within the Project limits shall be removed and reset as directed by the Resident. Payment for removal and reinstallation of existing signs will be considered incidental to the Contract. No separate payment will be made.

5. Do not excavate for Aggregate Subbase Course where existing material is suitable as determined by the Resident.

6. In areas where the Resident directs the Contractor not to excavate to the subgrade line shown on the plans, payment for removing existing pavement, grubbing, shaping, ditching, and compacting the existing subbase and layers of new subbase 6 inches or less thick will be made under appropriate equipment rental items.

7. All embankment material, except as otherwise shown, shall be Granular Borrow meeting the requirements of Standard Specifications Subsection 703.19, Granular Borrow, for Material for Underwater Backfill, with the additional requirement that the maximum particle size be limited to 4 inches.

8. Place loam 2 inches deep on all new or reconstructed sideslopes or as directed by the Resident.

9. Erosion Control Mix may be substituted in those areas normally receiving loam and seed as directed by the Resident. Placement shall be in accordance with Standard Specifications Section 619, Mulch. Payment will be made under Pay Item 619.14, Erosion Control Mix.

10. Place a 24 inch wide strip of Erosion Control Blanket on the sideslopes along the top of the riprap and behind the wingwalls.

11. Where it is apparent that runoff will cause continual erosion, Erosion Control Blanket, seeded gutters, riprap downspouts, and other gutters lined with Stone Ditch Protection shall be constructed after paving and shoulder work is completed. Payment will be made under the appropriate Contract items.

12. Protective Coating for Concrete Surfaces shall be applied to the following areas:

All exposed surfaces of concrete curbs and sidewalks,
Fascias down to the drip notch,
All exposed surfaces of Concrete Transition Barriers,
Concrete wearing surfaces,
Top of abutment backwalls and wingwalls, and
To one foot below the ground on vertical walls against earth.

13. Project information referred to below may be accessed at the following MaineDOT web address:
http://www.maine.gov/mdot/contractors/

14. The existing bridge plans may be accessed at the MaineDOT web address. The plans are reproductions of the original drawings as prepared for the construction of the bridge. It is very unlikely that the plans will show any construction field changes or any alterations which may have been made to the bridge during its life span.

15. Reports on hydrology and/or hydraulics applicable to the bridge site may be accessed at the MaineDOT web address. The reports are based on MaineDOT's interpretation of the information obtained for the subject site. No assurance is given that the information or the conclusions of the report will be representative of actual conditions at the time of construction.

16. The project geotechnical report titled: Bridgton Cornshop Bridge Final Geotechnical Report, 2026-01-15 may be accessed at the MaineDOT web address.

17. Geotechnical information furnished or referred to in this plan set is for the use of the Bidders and the Contractor. No assurance is given that the information or interpretations will be representative of actual subsurface conditions at the construction site. MaineDOT will not be responsible for the Bidders' or Contractor's interpretations of, or conclusions drawn from, the geotechnical information. The boring logs contained in the plan set present factual and interpretive subsurface information collected at discrete locations. Data provided may not be representative of the subsurface conditions between the boring locations.

18. Quantities included for pay items measured and paid for by Lump Sum are estimated quantities and are provided by MaineDOT for informational purposes only. Lump Sum pay items will be paid for at the Contract Bid amount, with no addition or reduction in payment to the Contractor if the actual final quantities are different from the MaineDOT provided estimated quantities, except as follows:

a. If a Lump Sum pay item is eliminated, the requirements of Standard Specifications Section 109.2, Elimination of Items, will take precedence.

b. If other Contract Documents specifically allow a change in payment for a Lump Sum pay item, those requirements will be followed.

c. If a design change results in changes to estimated quantities for Lump Sum pay items, price adjustments will be made in accordance with StandardSpecifications Section 109.7, Equitable Adjustments to Compensation and Time.

19. The existing bridge shall be removed by and become the property of the Contractor. The steel portions of the existing bridge may be coated with a lead-based paint system. The Contractor is responsible for the containment, proper management and disposal of all lead-contaminated hazardous waste generated by the process of demolishing the bridge. The Contractor is responsible for implementing appropriate OSHA mandated personal protection standards related to this process. Once the existing bridge is removed, the Contractor is solely responsible for the care, custody, and control of the components of the existing bridge and any hazardous waste generated as a result of the storage, recycling, or disposal of the bridge components, including lead-coated steel. The Contractor shall recycle or reuse the steel in accordance with the Maine Department of Environmental Protection's "Maine Hazardous Waste Management Regulations," Chapter 850. A copy of this regulation is available at MaineDOT's offices on Child Street in Augusta. Payment for all labor, materials, equipment, and other costs required to remove and dispose of the existing bridge will be considered incidental to the bridge removal pay item.

20. Payment for removal and relocation of boulders as indicated in the plans shall be considered incidental to the related Contract items.

LEGEND:

BB-BSB-101 — Designation and location of test boring drilled by New England Boring Contractors and monitored by Haley & Aldrich, Inc. in December 2022.

GS-BSB-01 — Designation and approximate location of grab sample obtained by Haley & Aldrich, Inc. in December 2022. As-sampled locations shown were determined by taping to existing site features.

Approximate location and orientation of interpretive subsurface profile (see Sheet 6).

Key

BB = Bridge boring

GS = Grab sample

NOTES:

1. *Existing site and topographic information and project stationing were taken from electronic files provided by Stantec on 9 May 2023.*
2. *As-drilled locations of test borings were determined in the field by MaineDOT using GPS survey equipment.*
3. *Refer to Sheet 7 for test boring logs.*
4. *Elevations are in feet and reference the North American Vertical Datum of 1988 (NAVD 88).*

NOTE

1. The sewer force main and water main relocations have been completed by others prior to the bridge construction. Locations shown are approximate and shall be verified in the field.

NOTES:

1. This generalized interpretive subsurface profile is intended to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized, and have been developed by interpretations of widely spaced explorations and samples. Actual soil transitions may vary and are probably more erratic. For more information refer to the exploration logs.
2. The existing timber grillage measurements and observations are limited. The lengths and depths of the timbers are unknown.

45											
	R2	65/65	46.5 - 51.9	RQD = 77%			NX Core				
50								351.5		——51.9	
										Bottom of Exploration at 51.9 feet below ground surface.	
55											
60											

Remarks:
1. No elevated photo-ionization detector readings were measured.

Stratification lines represent approximate boundaries between soil types; transitions may be gradual.

* Water level readings have been made at times and under conditions stated. Groundwater fluctuations may occur due to conditions other than those present at the time measurements were made.

ABUTMENT BACKFILL DETAIL

ABUTMENT NOTES

1. Reinforcing steel shall have a minimum concrete cover of 2 inches unless otherwise noted.

2. Place drains with a 4-inch diameter in the pile cap at 10 feet maximum spacing. The exact location will be determined by the Resident.

3. Cover joints where waterstops are not required in accordance with Standard Details Section 502.

4. Payment for the concrete jackets around the tops of the H-piles will not be paid for directly but will be considered incidental to Pay Item 502.219 Structural Concrete Abutments and Retaining Walls. Fill Concrete may be used for the concrete jackets.

5. Install Drainage Geocomposite behind the abutments and wingwalls up to the approach slab seat elevation in accordance with Special Provision Section 620, Drainage Geocomposite.

6. Abutments and wingwalls shall be backfilled with Granular Borrow, meeting the requirements of Material for Underwater Backfill. Pay limits will be the structural excavation limits as shown.

7. Asphalt Dampproofing shall meet the requirements of either ASTM D449 Type II, ASTM D1227 Type II - Class I, or ASTM D1227 Type III - Class I. The product shall be applied in accordance with the manufacturer's recommendations.

8. Payment for Asphalt Dampproofing and mortared chamfer at the joint between the Approach Slab and the End Diaphragm will not be made directly, but will be considered incidental to related Contract Items.

PILE NOTES

1. The maximum factored pile load is 228 kips at the Strength Limit State.

2. Piles shall be driven to the required resistance on or within bedrock in accordance with Standard Specification Section 501.

3. Estimate of piles required:

   Abutment No. 1: 5 - HP 14x89 @ 43 ft
   Abutment No. 2: 5 - HP 14x89 @ 42 ft

The order lengths of the piles shall include an additional 5 feet of length for each test pile to accommodate dynamic pile testing equipment.

4. H-pile material shall be ASTM A572, Grade 50.

5. H-pile splices shall be in accordance with Standard Detail 501(03).

6. All piles shall be equipped with a pile tip in accordance with Standard Specifications Subsections 501.048, Prefabricated Pile Tips and 711.10 H-Beam Piles, Splices and Tips.

7. Piles shall not be out of position shown by more than 2 inches in any direction.

8. The Contractor shall perform and submit a wave equation analysis for review and acceptance by the Resident. The maximum allowable driving stress is 0.90 times Fy. The submittal analyses shall include the proposed stopping criteria based on the wave equation analysis and the proposed driving system.

9. The Contractor shall perform 2 dynamic load test(s) with 24-hour (minimum) restrike tests to confirm the nominal resistance of the piles. The required nominal resistance for the pile is the factored axial pile load divided by a resistance factor of 0.65 per LRFD Specifications. The dynamic test shall be performed on the first production pile driven at each abutment.

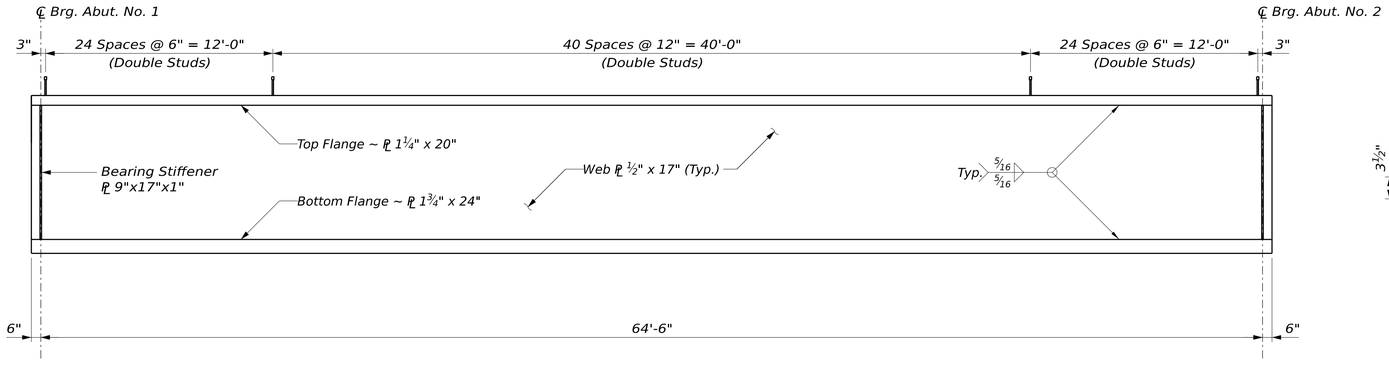
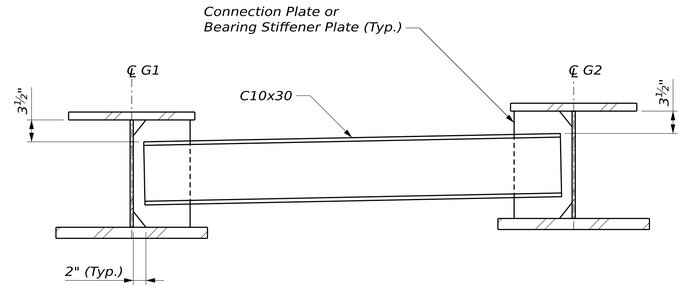
FRAMING PLAN



GIRDER ELEVATION

178 studs per girder (1,068 studs total)



CROSSFRAME TYPE X

See "Typical Weld Details" & Notes on Standard Detail 504(07)
Bay 1 Shown, Other Bays Similar. See Standard Detail 504(02)

STRUCTURAL STEEL NOTES

1. Camber ordinates, as shown, are computed to compensate for all dead load deflections and for the curvature of the finished grade profile.

2. No transverse butt weld splices will be allowed in the flange plates or web plates within 10 feet from the points of maximum negative moment or maximum positive moment. Butt weld splices in flanges shall be not less than 1 foot from transverse butt welds in the web plates and no transverse web or flange butt welds shall be located within 1 foot of other transverse welds (e.g. connection plates to web welds) on either flange or web. No transverse butt weld splices will be allowed in areas of stress reversal.

3. Sections of flange plates or web plates between transverse shop splices or between a transverse shop splice and a field splice shall be at least 20 feet in length unless otherwise shown on the Plans.

4. Bearing stiffeners shall be plumb after erection and dead loading of the structure. Intermediate web stiffeners may be either plumb or normal to the top flange.

5. Intermediate crossframe or diaphragm connection plates may be either plumb or normal to the top flange.

6. Provide a drip bar on the high side of each abutment on all girders in accordance with Standard Detail 504(10).

7. Structural steel was designed with a vertical construction load of 50 lb/sf and a lateral wind velocity during construction of 115 mph.

8. Ends of girder webs shall be vertical under full dead load.

9. At the Contractor's option, all Structural Steel may be Hot-Dipped Galvanized in accordance with Standard Specifications Section 506, Shop Applied Protective Coating, as approved by the Resident. Double Hot-Dipped galvanizing shall be approved by the Resident. Payment will be considered incidental to Item 506.9104, Thermal Spray Coating (Shop Applied), no separate payment will be made.

10. The Type-X diaphragms at the abutments are optional and may be omitted if the Contractor deems they are unnecessary for steel erection.

11. Connection plates shall have a minimum thickness of $\frac{5}{8}$" and a minimum width of 9".

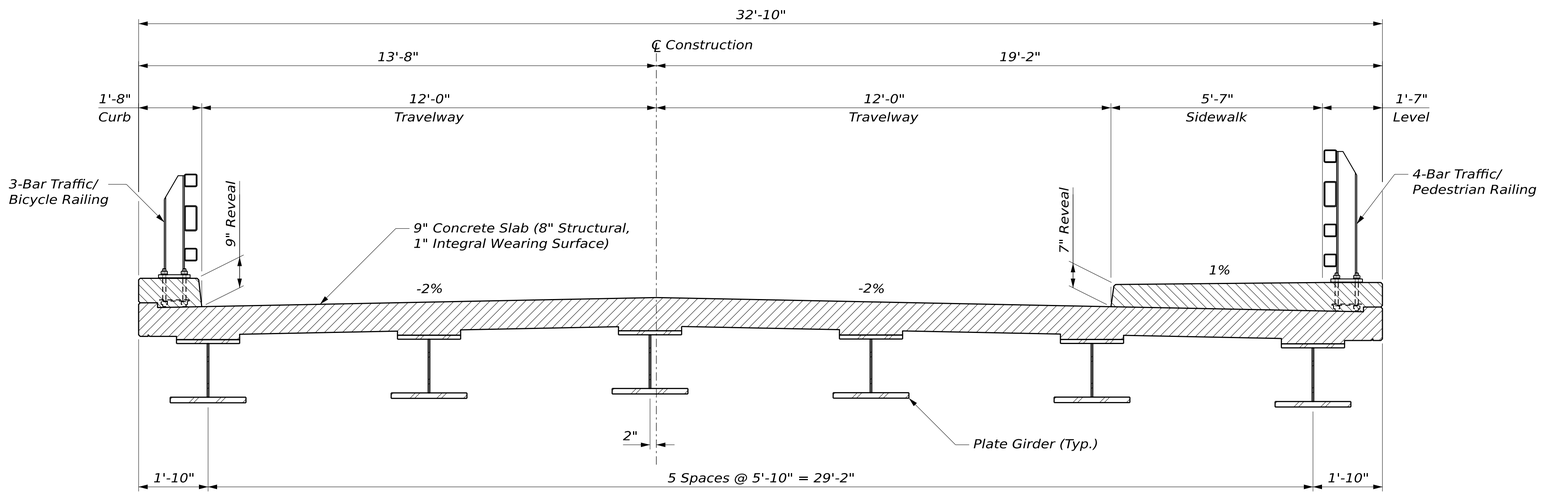
SUPERSTRUCTURE PLAN



TRANSVERSE SECTION

SUPERSTRUCTURE NOTES

1. The theoretical blocking used for design of the structure is 2¾ inches at the centerline of bearing of the abutments. Refer to Standard Detail 502(03) for blocking details.

2. Reinforcing steel shall have a minimum concrete cover of 2 inches unless otherwise noted.

3. Form a one inch V-groove on the fascias at the horizontal joint between the curb and slab.

4. The superstructure slab concrete and upper portions of the abutments shall be placed in one continuous operation and shall be kept plastic until the entire placement has been made.

5. Precast Concrete Deck Panels are not allowed on this project.

6. Provide 4 additional stirrups in the curbs at each Transition Barrier location.

7. The Contractor shall install Transition Barrier vertical closed stirrups, as shown in Standard Details Section 526, prior to the placement of the curb or sidewalk concrete.

8. Transition Barrier reinforcing steel shall be low-carbon chromium.
