* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
- Dt = Total depth of the composite section (A6.10.7.1.2)
- Rh = Hybrid factor (A6.10.1.10.1)
- Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
- Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
- Dc = Total depth of the web in compression, per Appendix D6.3.1
- Myt = Yield moment to the top flange, per Appendix D6.2
- Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Rh = Hybrid factor

Rb = Load shedding factor (only applies to compression flange)

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress

due to wind (per A6.10.7.2.1-2, A6.10.8.1.1-1, or

A6.10.8.1.2-1) and/or user input lateral effects

w = Value for F+ includes lateral load effects

** Legend of Resistance Calculation:

Composite Section in Positive Flexure, Noncompact Section:

A. Compression flange governs, Fr calculated using A6.10.7.2.2-1

B. Tension flange governs, Fr calculated using A6.10.7.2.2-2

Composite Section in Negative Flexure or Noncomposite Section:

C. Compression flange governs, Fr calculated using A6.10.8.1.3-1

D. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-1

E. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-2

F. Tension flange governs, Fr calculated using A6.10.8.1.3-1

G. Tension flange governs, Fr calculated using A6.10.8.3-1

H. Girder skew angle has not been entered. Appendix A provisions have not been checked,
but may be applicable.

SPECIAL #1 - SPECIFICATION CHECKING (cont.)

INTERMEDIATE VALUES FOR LATERAL TORSIONAL BUCKLING CALCULATIONS (cont.)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc
under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either
flange under uniform bending with consideration of compression-flange residual
stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

Madawaska Moderate Stringer CL-625-ONT Truck Inv
SPECIAL #1 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

** Legend of General Notes:

- Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr
F+ = fbu + (1/3)*fl, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity
M+ = Mu + (1/3)*fl*Sxt, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1
If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity
w = Value for F+ or M+ includes lateral load effects

*** Legend of Code Check:

- A. Insufficient flexural resistance
B. Based on the total stress in the bottom flange, this section is analyzed for positive flexure, so the top flange capacity is based on compression. However, the total factored stress (F+) in the top flange is tensile. The user should verify the acceptability of the section by comparing the top flange stress (F+) to the flexural resistance (Fr) of the top flange in negative flexure.
C. The unbraced range containing this analysis point varies in depth and has a flange transition more than one foot away from the ends of the unbraced range.

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

SERVICE LIMIT STATE - FLEXURAL RESISTANCE (cont.)

* Legend of General Notes:

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from the stress flexural resistance, Fr

Fu = For bottom flanges of composite sections or both flanges of noncomposite sections, this value includes lateral stresses when input by the user (A6.10.4.2.2)

** Legend of Resistance Calculation:

A. Composite, top flange, Fr calculated using A6.10.4.2.2-1

B. Composite, bottom flange, Fr calculated using A6.10.4.2.2-2

C. Noncomposite, Fr calculated using A6.10.4.2.2-3

SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

For the live loadings input by the user, the program encountered one or more specification check failures. The following is a list of output table headings, listed separately for each live loading for which failures have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE)
SHEAR CAPACITY
BEARING STIFFENER CHECK
DEFLECTION LIMITS FOR LIVE LOAD
RATING FACTORS - STRESS FLEXURAL CAPACITY
RATING FACTORS - SHEAR CAPACITY

 SPECIAL #1 - ANALYSIS (cont.)

UNFACTORED FLEXURAL STRESSES (cont.)

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.
 TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.
 When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
- Dt = Total depth of the composite section (A6.10.7.1.2)
- Rh = Hybrid factor (A6.10.1.10.1)
- Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
- Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
- Dc = Total depth of the web in compression, per Appendix D6.3.1
- Myt = Yield moment to the top flange, per Appendix D6.2
- Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Rh = Hybrid factor

Rb = Load shedding factor (only applies to compression flange)

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = fbu + (1/3)*fl, total factored flexural + lateral stress

due to wind (per A6.10.7.2.1-2, A6.10.8.1.1-1, or

A6.10.8.1.2-1) and/or user input lateral effects

w = Value for F+ includes lateral load effects

** Legend of Resistance Calculation:

Composite Section in Positive Flexure, Noncompact Section:

A. Compression flange governs, Fr calculated using A6.10.7.2.2-1

B. Tension flange governs, Fr calculated using A6.10.7.2.2-2

Composite Section in Negative Flexure or Noncomposite Section:

C. Compression flange governs, Fr calculated using A6.10.8.1.3-1

D. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-1

E. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-2

F. Tension flange governs, Fr calculated using A6.10.8.1.3-1

G. Tension flange governs, Fr calculated using A6.10.8.3-1

H. Girder skew angle has not been entered. Appendix A provisions have not been checked,
but may be applicable.

 SPECIAL #1 - SPECIFICATION CHECKING (cont.)

INTERMEDIATE VALUES FOR LATERAL TORSIONAL BUCKLING CALCULATIONS (cont.)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
 (Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc
 under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either
 flange under uniform bending with consideration of compression-flange residual
 stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier
 (Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
 (Article A6.2.1 or A6.2.2)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

Madawaska Moderate Stringer CL-625-ONT Truck Oper
SPECIAL #1 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

- ** Legend of General Notes:
- Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr
 - F+ = fbu + (1/3)*fl, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity
 - M+ = Mu + (1/3)*fl*Sxt, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1
If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity
 - w = Value for F+ or M+ includes lateral load effects

- *** Legend of Code Check:
- A. Insufficient flexural resistance
 - B. Based on the total stress in the bottom flange, this section is analyzed for positive
flexure, so the top flange capacity is based on compression. However, the total
factored stress (F+) in the top flange is tensile. The user should verify the
acceptability of the section by comparing the top flange stress (F+) to the flexural
resistance (Fr) of the top flange in negative flexure.
 - C. The unbraced range containing this analysis point varies in depth and has a flange
transition more than one foot away from the ends of the unbraced range.

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of Intermediate Calculations:

Dc = Depth of web in compression

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fcrw

Fcrw = Nominal bend-buckling resistance, LRFD Specifications 6.10.4.2.2-4

fc = Compression-flange stress calculated without flange lateral bending

N/A = This check is not required for composite sections in positive

flexure in which the web satisfies the requirement of LRFD

Specifications Article 6.10.2.1.1

NOTES:

GIVEN DISTRIBUTION FACTOR IS THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR USED TO PRODUCE THE GIVEN RATING. FOR THE STR-IP LIMIT STATE, THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR ACCOUNTS FOR THE PRESENCE OF PEDESTRIAN LOADS, IF APPLICABLE.

ALL RATINGS ARE BASED ON THE EXCLUSION OF THE DESIGN FUTURE WEARING SURFACE.

SYMBOL DESIGNATION FOR RATING FACTORS:

M - MOMENT RATING FACTOR CONTROLS
 S - SHEAR RATING FACTOR CONTROLS

Madawaska Moderate Stringer CL-625-ONT Truck Oper
SUMMARY - SPECIFICATION CHECKS
-----SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

SPECIAL #1 - ANALYSIS (cont.)

UNFACTORED FLEXURAL STRESSES (cont.)

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user
input lateral loads have been entered.

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
- Dt = Total depth of the composite section (A6.10.7.1.2)
- Rh = Hybrid factor (A6.10.1.10.1)
- Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
- Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
- Dc = Total depth of the web in compression, per Appendix D6.3.1
- Myt = Yield moment to the top flange, per Appendix D6.2
- Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Rh = Hybrid factor

Rb = Load shedding factor (only applies to compression flange)

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress
due to wind (per A6.10.7.2.1-2, A6.10.8.1.1-1, or
A6.10.8.1.2-1) and/or user input lateral effects

w = Value for F+ includes lateral load effects

** Legend of Resistance Calculation:

Composite Section in Positive Flexure, Noncompact Section:

A. Compression flange governs, Fr calculated using A6.10.7.2.2-1

B. Tension flange governs, Fr calculated using A6.10.7.2.2-2

Composite Section in Negative Flexure or Noncomposite Section:

C. Compression flange governs, Fr calculated using A6.10.8.1.3-1

D. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-1

E. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-2

F. Tension flange governs, Fr calculated using A6.10.8.1.3-1

G. Tension flange governs, Fr calculated using A6.10.8.3-1

H. Girder skew angle has not been entered. Appendix A provisions have not been checked,
but may be applicable.

SPECIAL #1 - SPECIFICATION CHECKING (cont.)

INTERMEDIATE VALUES FOR LATERAL TORSIONAL BUCKLING CALCULATIONS (cont.)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc
under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either
flange under uniform bending with consideration of compression-flange residual
stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

Madawaska Moderate Stringer CL-625-ONT Lane Inv
SPECIAL #1 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

- ** Legend of General Notes:
- Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr
 - F+ = fbu + (1/3)*fl, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity
 - M+ = Mu + (1/3)*fl*Sxt, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1
If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity
 - w = Value for F+ or M+ includes lateral load effects

- *** Legend of Code Check:
- A. Insufficient flexural resistance
 - B. Based on the total stress in the bottom flange, this section is analyzed for positive
flexure, so the top flange capacity is based on compression. However, the total
factored stress (F+) in the top flange is tensile. The user should verify the
acceptability of the section by comparing the top flange stress (F+) to the flexural
resistance (Fr) of the top flange in negative flexure.
 - C. The unbraced range containing this analysis point varies in depth and has a flange
transition more than one foot away from the ends of the unbraced range.

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

SERVICE LIMIT STATE - FLEXURAL RESISTANCE (cont.)

* Legend of General Notes:

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from the stress flexural resistance, Fr

Fu = For bottom flanges of composite sections or both flanges of noncomposite sections, this value includes lateral stresses when input by the user (A6.10.4.2.2)

** Legend of Resistance Calculation:

A. Composite, top flange, Fr calculated using A6.10.4.2.2-1

B. Composite, bottom flange, Fr calculated using A6.10.4.2.2-2

C. Noncomposite, Fr calculated using A6.10.4.2.2-3

SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1 - ANALYSIS (cont.)

UNFACTORED FLEXURAL STRESSES (cont.)

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis. When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

* Legend of General Notes:

Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)

Dt = Total depth of the composite section (A6.10.7.1.2)

Rh = Hybrid factor (A6.10.1.10.1)

Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)

Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)

Dc = Total depth of the web in compression, per Appendix D6.3.1

Myt = Yield moment to the top flange, per Appendix D6.2

Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1

B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2

C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)

E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)

F. Discretely braced tension flange governs (App A A6.1.2)

G. Continuously braced compression flange governs (App A A6.1.3)

H. Continuously braced tension flange governs (App A A6.1.4)

INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS

M+ = Mu + (1/3)*fl*Sxt, total factored flexural + lateral moment due to
wind or user input effects, A6.10.7.1.1-1

w = Value for M+ includes lateral load effects

Madawaska Moderate Stringer CL-625-ONT Lane Oper
SPECIAL #1 - SPECIFICATION CHECKING (cont.)

MOMENT FLEXURAL CAPACITY (COMPOSITE, +FLEX, COMPACT OR APPENDIX A, NO LTB) (cont.)

** Legend of Resistance Calculation:

Compact Section:

- A. $D_p \leq 0.1 \cdot D_t$, M_n calculated using A6.10.7.1.2-1
- B. $D_p > 0.1 \cdot D_t$, M_n calculated using A6.10.7.1.2-2
- C. Continuous span, M_n calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A 6.1.2)
- G. Continuously braced compression flange governs (App A 6.1.3)
- H. Continuously braced tension flange governs (App A 6.1.4)

* Legend of General Notes:

Rh = Hybrid factor

Rb = Load shedding factor (only applies to compression flange)

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, FrF+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stressdue to wind (per A6.10.7.2.1-2, A6.10.8.1.1-1, or
A6.10.8.1.2-1) and/or user input lateral effects

w = Value for F+ includes lateral load effects

** Legend of Resistance Calculation:

Composite Section in Positive Flexure, Noncompact Section:

A. Compression flange governs, Fr calculated using A6.10.7.2.2-1

B. Tension flange governs, Fr calculated using A6.10.7.2.2-2

Composite Section in Negative Flexure or Noncomposite Section:

C. Compression flange governs, Fr calculated using A6.10.8.1.3-1

D. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-1

E. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-2

F. Tension flange governs, Fr calculated using A6.10.8.1.3-1

G. Tension flange governs, Fr calculated using A6.10.8.3-1

H. Girder skew angle has not been entered. Appendix A provisions have not been checked,
but may be applicable.

 SPECIAL #1 - SPECIFICATION CHECKING (cont.)

INTERMEDIATE VALUES FOR LATERAL TORSIONAL BUCKLING CALCULATIONS (cont.)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
 (Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc
 under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either
 flange under uniform bending with consideration of compression-flange residual
 stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier
 (Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
 (Article A6.2.1 or A6.2.2)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE)

SPECIAL #1 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = fbu + (1/3)*fl, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = Mu + (1/3)*fl*Sxt, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from the stress flexural resistance, Fr

Fu = For bottom flanges of composite sections or both flanges of noncomposite sections, this value includes lateral stresses when input by the user (A6.10.4.2.2)

** Legend of Resistance Calculation:

A. Composite, top flange, Fr calculated using A6.10.4.2.2-1

B. Composite, bottom flange, Fr calculated using A6.10.4.2.2-2

C. Noncomposite, Fr calculated using A6.10.4.2.2-3

* Legend of Intermediate Calculations:

Dc = Depth of web in compression

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fcrw

Fcrw = Nominal bend-buckling resistance, LRFD Specifications 6.10.4.2.2-4

fc = Compression-flange stress calculated without flange lateral bending

N/A = This check is not required for composite sections in positive
flexure in which the web satisfies the requirement of LRFD
Specifications Article 6.10.2.1.1

Maximum Factored Shear Resistance (kips) 98.14
 Location (ft) 18.54R

NOTES:

GIVEN DISTRIBUTION FACTOR IS THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR
 USED TO PRODUCE THE GIVEN RATING. FOR THE STR-IP LIMIT STATE, THE VEHICULAR
 LIVE LOAD DISTRIBUTION FACTOR ACCOUNTS FOR THE PRESENCE OF PEDESTRIAN
 LOADS, IF APPLICABLE.

ALL RATINGS ARE BASED ON THE EXCLUSION OF THE DESIGN FUTURE WEARING SURFACE.

SYMBOL DESIGNATION FOR RATING FACTORS:

M - MOMENT RATING FACTOR CONTROLS
 S - SHEAR RATING FACTOR CONTROLS

Madawaska Moderate Stringer CL-625-ONT Lane Oper
SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

COMPACTNESS CRITERIA

WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY

ECONOMIC FEASIBILITY CHECKS

Madawaska Moderate Stringer CL-625-ONT Lane Oper
SUMMARY - SPECIFICATION CHECKS (cont.)

SPECIFICATION CHECK FAILURES

For the live loadings input by the user, the program encountered one or more specification check failures. The following is a list of output table headings, listed separately for each live loading for which failures have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1 - ANALYSIS (cont.)

UNFACTORED FLEXURAL STRESSES (cont.)

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user
input lateral loads have been entered.

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

Madawaska Moderate Stringer MainedOT Trucks 1-4
SPECIAL #1 - ANALYSIS (cont.)

FACTORED LATERAL STRESSES

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
- Dt = Total depth of the composite section (A6.10.7.1.2)
- Rh = Hybrid factor (A6.10.1.10.1)
- Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
- Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
- Dc = Total depth of the web in compression, per Appendix D6.3.1
- Myt = Yield moment to the top flange, per Appendix D6.2
- Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

D. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-1

E. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-2

F. Tension flange governs, Fr calculated using A6.10.8.1.3-1

G. Tension flange governs, Fr calculated using A6.10.8.3-1

H. Girder skew angle has not been entered. Appendix A provisions have not been checked,
but may be applicable.

 SPECIAL #1 - SPECIFICATION CHECKING (cont.)

INTERMEDIATE VALUES FOR LATERAL TORSIONAL BUCKLING CALCULATIONS (cont.)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
 (Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc
 under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either
 flange under uniform bending with consideration of compression-flange residual
 stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier
 (Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
 (Article A6.2.1 or A6.2.2)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

Madawaska Moderate Stringer MaineDOT Trucks 1-4
SPECIAL #1 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = fbu + (1/3)*fl, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = Mu + (1/3)*fl*Sxt, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from the stress flexural resistance, Fr

Fu = For bottom flanges of composite sections or both flanges of noncomposite sections, this value includes lateral stresses when input by the user (A6.10.4.2.2)

** Legend of Resistance Calculation:

A. Composite, top flange, Fr calculated using A6.10.4.2.2-1

B. Composite, bottom flange, Fr calculated using A6.10.4.2.2-2

C. Noncomposite, Fr calculated using A6.10.4.2.2-3

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis. When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS (cont.)

* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
- Dt = Total depth of the composite section (A6.10.7.1.2)
- Rh = Hybrid factor (A6.10.1.10.1)
- Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
- Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
- Dc = Total depth of the web in compression, per Appendix D6.3.1
- Myt = Yield moment to the top flange, per Appendix D6.2
- Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_{fl}$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $\mu + (1/3) \cdot f_{fl} \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis. When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $\mu + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis. When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_{fl}$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $M_u + (1/3) \cdot f_{fl} \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

OVERALL RATING SUMMARY W/O FWS (cont.)

BRIDGE LOAD RATINGS W/O FWS (cont.)

NOTES:

GIVEN DISTRIBUTION FACTOR IS THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR USED TO PRODUCE THE GIVEN RATING. FOR THE STR-IP LIMIT STATE, THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR ACCOUNTS FOR THE PRESENCE OF PEDESTRIAN LOADS, IF APPLICABLE.

ALL RATINGS ARE BASED ON THE EXCLUSION OF THE DESIGN FUTURE WEARING SURFACE.

SYMBOL DESIGNATION FOR RATING FACTORS:

M - MOMENT RATING FACTOR CONTROLS

S - SHEAR RATING FACTOR CONTROLS

Madawaska Moderate Stringer MainedOT Trucks 1-4
SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

COMPACTNESS CRITERIA
WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY

SPECIAL #1 - ANALYSIS (cont.)

UNFACTORED FLEXURAL STRESSES (cont.)

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
- Dt = Total depth of the composite section (A6.10.7.1.2)
- Rh = Hybrid factor (A6.10.1.10.1)
- Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
- Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
- Dc = Total depth of the web in compression, per Appendix D6.3.1
- Myt = Yield moment to the top flange, per Appendix D6.2
- Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Rh = Hybrid factor

Rb = Load shedding factor (only applies to compression flange)

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = fbu + (1/3)*fl, total factored flexural + lateral stress

due to wind (per A6.10.7.2.1-2, A6.10.8.1.1-1, or

A6.10.8.1.2-1) and/or user input lateral effects

w = Value for F+ includes lateral load effects

** Legend of Resistance Calculation:

Composite Section in Positive Flexure, Noncompact Section:

A. Compression flange governs, Fr calculated using A6.10.7.2.2-1

B. Tension flange governs, Fr calculated using A6.10.7.2.2-2

Composite Section in Negative Flexure or Noncomposite Section:

C. Compression flange governs, Fr calculated using A6.10.8.1.3-1

D. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-1

E. Compression flange governs, Fr calculated using FLB, A6.10.8.2.2-2

F. Tension flange governs, Fr calculated using A6.10.8.1.3-1

G. Tension flange governs, Fr calculated using A6.10.8.3-1

H. Girder skew angle has not been entered. Appendix A provisions have not been checked,
but may be applicable.

SPECIAL #1 - SPECIFICATION CHECKING (cont.)

INTERMEDIATE VALUES FOR LATERAL TORSIONAL BUCKLING CALCULATIONS (cont.)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc
under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either
flange under uniform bending with consideration of compression-flange residual
stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

Madawaska Moderate Stringer MaineDOT Trucks 5-8
SPECIAL #1 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = fbu + (1/3)*fl, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = Mu + (1/3)*fl*Sxt, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from the stress flexural resistance, Fr

Fu = For bottom flanges of composite sections or both flanges of noncomposite sections, this value includes lateral stresses when input by the user (A6.10.4.2.2)

** Legend of Resistance Calculation:

A. Composite, top flange, Fr calculated using A6.10.4.2.2-1

B. Composite, bottom flange, Fr calculated using A6.10.4.2.2-2

C. Noncomposite, Fr calculated using A6.10.4.2.2-3

* Legend of Intermediate Calculations:

Dc = Depth of web in compression

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from
 from the stress flexural resistance, Fcrw

Fcrw = Nominal bend-buckling resistance, LRFD Specifications 6.10.4.2.2-4

fc = Compression-flange stress calculated without flange lateral bending

N/A = This check is not required for composite sections in positive
 flexure in which the web satisfies the requirement of LRFD
 Specifications Article 6.10.2.1.1

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis. When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

*** Legend of Code Check:

A. Insufficient flexural resistance

B. Based on the total stress in the bottom flange, this section is analyzed for positive flexure, so the top flange capacity is based on compression. However, the total factored stress (F+) in the top flange is tensile. The user should verify the acceptability of the section by comparing the top flange stress (F+) to the flexural resistance (Fr) of the top flange in negative flexure.

C. The unbraced range containing this analysis point varies in depth and has a flange transition more than one foot away from the ends of the unbraced range.

 Madawaska Moderate Stringer MaineDOT Trucks 5-8
 SPECIAL #2 - SPECIFICATION CHECKING (cont.)

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
 (wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis. When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS (cont.)

* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
F. Discretely braced tension flange governs (App A A6.1.2)
G. Continuously braced compression flange governs (App A A6.1.3)
H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

*** Legend of Code Check:

A. Insufficient flexural resistance

B. Based on the total stress in the bottom flange, this section is analyzed for positive flexure, so the top flange capacity is based on compression. However, the total factored stress (F+) in the top flange is tensile. The user should verify the acceptability of the section by comparing the top flange stress (F+) to the flexural resistance (Fr) of the top flange in negative flexure.

C. The unbraced range containing this analysis point varies in depth and has a flange transition more than one foot away from the ends of the unbraced range.

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis. When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

 SPECIAL #4 - SPECIFICATION CHECKING (cont.)

INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS (cont.)

* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
- Dt = Total depth of the composite section (A6.10.7.1.2)
- Rh = Hybrid factor (A6.10.1.10.1)
- Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
- Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
- Dc = Total depth of the web in compression, per Appendix D6.3.1
- Myt = Yield moment to the top flange, per Appendix D6.2
- Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
 from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
 A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
 If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $\mu + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
 input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
 (wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

NOTES:

GIVEN DISTRIBUTION FACTOR IS THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR
USED TO PRODUCE THE GIVEN RATING. FOR THE STR-IP LIMIT STATE, THE VEHICULAR
LIVE LOAD DISTRIBUTION FACTOR ACCOUNTS FOR THE PRESENCE OF PEDESTRIAN
LOADS, IF APPLICABLE.

ALL RATINGS ARE BASED ON THE EXCLUSION OF THE DESIGN FUTURE WEARING SURFACE.

SYMBOL DESIGNATION FOR RATING FACTORS:

M - MOMENT RATING FACTOR CONTROLS
S - SHEAR RATING FACTOR CONTROLS

Madawaska Moderate Stringer MainedOT Trucks 5-8
SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

SPECIAL #1 - ANALYSIS (cont.)

FACTORED ANALYSIS RESULTS (cont.)

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

FACTORED LATERAL STRESSES

This output report is not applicable because no lateral loads (wind or user input lateral loads) have been entered.

* Legend of General Notes:

Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

NOTE: Intermediate values have been moved to a separate output report,
INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS

M+ = Mu + (1/3)*fl*Sxt, total factored flexural + lateral moment due to
wind or user input effects, A6.10.7.1.1-1

w = Value for M+ includes lateral load effects

** Legend of Resistance Calculation:

Compact Section:

A. Dp ≤ 0.1*Dt, Mn calculated using A6.10.7.1.2-1

B. Dp > 0.1*Dt, Mn calculated using A6.10.7.1.2-2

C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)

E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)

F. Discretely braced tension flange governs (App A 6.1.2)

G. Continuously braced compression flange governs (App A 6.1.3)

H. Continuously braced tension flange governs (App A 6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, FrF+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacityM+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

Madawaska Minor Stringer HL-93 Inv
SPECIAL #1 - SPECIFICATION CHECKING (cont.)

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

NOTES:

GIVEN DISTRIBUTION FACTOR IS THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR USED TO PRODUCE THE GIVEN RATING. FOR THE STR-IP LIMIT STATE, THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR ACCOUNTS FOR THE PRESENCE OF PEDESTRIAN LOADS, IF APPLICABLE.

ALL RATINGS ARE BASED ON THE EXCLUSION OF THE DESIGN FUTURE WEARING SURFACE.

SYMBOL DESIGNATION FOR RATING FACTORS:

M - MOMENT RATING FACTOR CONTROLS
 S - SHEAR RATING FACTOR CONTROLS

SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY
ECONOMIC FEASIBILITY CHECKS

SUMMARY - SPECIFICATION CHECKS (cont.)

SPECIFICATION CHECK FAILURES

For the live loadings input by the user, the program encountered one or more specification check failures. The following is a list of output table headings, listed separately for each live loading for which failures have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

SPECIAL #1 - ANALYSIS (cont.)

FACTORED ANALYSIS RESULTS (cont.)

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

FACTORED LATERAL STRESSES

This output report is not applicable because no lateral loads (wind or user input lateral loads) have been entered.

* Legend of General Notes:

Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of $R_b R_h F_y c$ under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, FrF+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacityM+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

 Madawaska Minor Stringer HL-93 Oper
 SPECIAL #1 - SPECIFICATION CHECKING (cont.)

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
 (wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of Intermediate Calculations:

Dc = Depth of web in compression

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fcrw

Fcrw = Nominal bend-buckling resistance, LRFD Specifications 6.10.4.2.2-4

fc = Compression-flange stress calculated without flange lateral bending

N/A = This check is not required for composite sections in positive
flexure in which the web satisfies the requirement of LRFD
Specifications Article 6.10.2.1.1

 SUMMARY - OVERALL REACTIONS

REACTIONS & ROTATIONS PER GIRDER (UNFACTORED, W/O IMPACT, W/ DISTRIBUTION)
 FOR ELASTOMERIC BEARING PAD DESIGN

Support No.		Minimum Reaction LC (kips)	Maximum Reaction LC (kips)	Live Load Rotation LC (radians)
1	Total DC1	0.87	0.87	
	Total DL	0.87	0.87	
	LL (SPECIAL #1)	0.00	30.68	0.003935
2	Total DC1	0.87	0.87	
	Total DL	0.87	0.87	
	LL (SPECIAL #1)	0.00	30.68	0.003935

Note: Rotation is about an axis normal to the centerline of the beam.
 The rotation value given is the larger of the positive
 rotation and absolute value of the negative rotation due
 to live load.

 Madawaska Minor Stringer HL-93 Oper
 SUMMARY - OVERALL REACTIONS (cont.)

REACTIONS & ROTATIONS PER GIRDER (UNFACTORED, W/ IMPACT, W/ DISTRIBUTION)
 FOR POT, STEEL OR DISC BEARING DESIGN

Support No.		Minimum Reaction LC (kips)	Maximum Reaction LC (kips)	Rotation LC (radians)
1	Total DC1	0.87	0.87	-0.000311
	Total DL	0.87	0.87	-0.000311
	LL (SPECIAL #1)	0.00	39.57	-0.005044
2	Total DC1	0.87	0.87	0.000311
	Total DL	0.87	0.87	0.000311
	LL (SPECIAL #1)	0.00	39.57	0.005044

Note: Rotation is about an axis normal to the centerline of the beam.

SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY
ECONOMIC FEASIBILITY CHECKS

Madawaska Minor Stringer HL-93 Oper
SUMMARY - SPECIFICATION CHECKS (cont.)

SPECIFICATION CHECK FAILURES

For the live loadings input by the user, the program encountered one or more specification check failures. The following is a list of output table headings, listed separately for each live loading for which failures have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

BEARING STIFFENER CHECK
DEFLECTION LIMITS FOR LIVE LOAD

%WARNING - <Input Post Processor>:

The specified yield strength of the web should
be greater than the maximum of 36 ksi or 70 percent
of the specified yield strength of the higher
strength flange. (LRFD 6.10.1.3)

For Material ID No. 1:

Web yield of 30. ksi is less than 36. ksi

Input Check Completed

- 6 warnings were issued.
- Please verify that the input is correct.
- The program will continue running.

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.
 TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.
 When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

SPECIAL #1 - ANALYSIS (cont.)

FACTORED ANALYSIS RESULTS (cont.)

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

FACTORED LATERAL STRESSES

This output report is not applicable because no lateral loads (wind or user input lateral loads) have been entered.

* Legend of General Notes:

Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

NOTE: Intermediate values have been moved to a separate output report,
INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS

M+ = Mu + (1/3)*fl*Sxt, total factored flexural + lateral moment due to
wind or user input effects, A6.10.7.1.1-1

w = Value for M+ includes lateral load effects

** Legend of Resistance Calculation:

Compact Section:

A. $D_p \leq 0.1 \cdot D_t$, Mn calculated using A6.10.7.1.2-1

B. $D_p > 0.1 \cdot D_t$, Mn calculated using A6.10.7.1.2-2

C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)

E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)

F. Discretely braced tension flange governs (App A 6.1.2)

G. Continuously braced compression flange governs (App A 6.1.3)

H. Continuously braced tension flange governs (App A 6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, FrF+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacityM+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

Madawaska Minor Stringer CL-625-ONT Truck Inv
SPECIAL #1 - SPECIFICATION CHECKING (cont.)

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY
ECONOMIC FEASIBILITY CHECKS

SUMMARY - SPECIFICATION CHECKS (cont.)

SPECIFICATION CHECK FAILURES

For the live loadings input by the user, the program encountered one or more specification check failures. The following is a list of output table headings, listed separately for each live loading for which failures have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

SPECIAL #1 - ANALYSIS (cont.)

FACTORED ANALYSIS RESULTS (cont.)

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

FACTORED LATERAL STRESSES

This output report is not applicable because no lateral loads (wind or user input lateral loads) have been entered.

* Legend of General Notes:

Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS

M+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to
wind or user input effects, A6.10.7.1.1-1

w = Value for M+ includes lateral load effects

** Legend of Resistance Calculation:

Compact Section:

A. $D_p \leq 0.1 \cdot D_t$, M_n calculated using A6.10.7.1.2-1

B. $D_p > 0.1 \cdot D_t$, M_n calculated using A6.10.7.1.2-2

C. Continuous span, M_n calculated using A6.10.7.1.2-3

Appendix A:

D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)

E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)

F. Discretely braced tension flange governs (App A 6.1.2)

G. Continuously braced compression flange governs (App A 6.1.3)

H. Continuously braced tension flange governs (App A 6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, FrF+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacityM+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

Madawaska Minor Stringer CL-625-ONT Truck Oper
 SPECIAL #1 - SPECIFICATION CHECKING (cont.)

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
 (wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of Intermediate Calculations:

Dc = Depth of web in compression

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fcrw

Fcrw = Nominal bend-buckling resistance, LRFD Specifications 6.10.4.2.2-4

fc = Compression-flange stress calculated without flange lateral bending

N/A = This check is not required for composite sections in positive flexure in which the web satisfies the requirement of LRFD Specifications Article 6.10.2.1.1

 SUMMARY - OVERALL REACTIONS

REACTIONS & ROTATIONS PER GIRDER (UNFACTORED, W/O IMPACT, W/ DISTRIBUTION)
 FOR ELASTOMERIC BEARING PAD DESIGN

Support No.		Minimum Reaction LC (kips)	Maximum Reaction LC (kips)	Live Load Rotation LC (radians)
1	Total DC1	0.87	0.87	
	Total DL	0.87	0.87	
	LL (SPECIAL #1)	0.00	35.27	0.004168
2	Total DC1	0.87	0.87	
	Total DL	0.87	0.87	
	LL (SPECIAL #1)	0.00	35.27	0.004168

Note: Rotation is about an axis normal to the centerline of the beam.
 The rotation value given is the larger of the positive
 rotation and absolute value of the negative rotation due
 to live load.

Maximum Factored Shear Resistance (kips) 89.44
 Location (ft) 0.00

NOTES:

GIVEN DISTRIBUTION FACTOR IS THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR
 USED TO PRODUCE THE GIVEN RATING. FOR THE STR-IP LIMIT STATE, THE VEHICULAR
 LIVE LOAD DISTRIBUTION FACTOR ACCOUNTS FOR THE PRESENCE OF PEDESTRIAN
 LOADS, IF APPLICABLE.

ALL RATINGS ARE BASED ON THE EXCLUSION OF THE DESIGN FUTURE WEARING SURFACE.

SYMBOL DESIGNATION FOR RATING FACTORS:

M - MOMENT RATING FACTOR CONTROLS
 S - SHEAR RATING FACTOR CONTROLS

Madawaska Minor Stringer CL-625-ONT Truck Oper
SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY
ECONOMIC FEASIBILITY CHECKS

Madawaska Minor Stringer CL-625-ONT Truck Oper
SUMMARY - SPECIFICATION CHECKS (cont.)

SPECIFICATION CHECK FAILURES

For the live loadings input by the user, the program encountered one or more specification check failures. The following is a list of output table headings, listed separately for each live loading for which failures have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

BEARING STIFFENER CHECK
DEFLECTION LIMITS FOR LIVE LOAD

 RATINGS W/O FWS 1

The following are system settings:

STEEL DENSITY/WEIGHT 490. lbf/ft^3 (default)
 CONSTRUCT. MODULAR RATIO * (computed, if necessary)
 INC. FLG. IN HAUNCH WGT. Y (default)
 AASHTO/PENNDOT SPECS P (default)
 PRINT DIMENSION FILE N (default)

%WARNING - <Input Post Processor>:

The specified yield strength of the web should
 be greater than the maximum of 36 ksi or 70 percent
 of the specified yield strength of the higher
 strength flange. (LRFD 6.10.1.3)
 For Material ID No. 1:
 Web yield of 30. ksi is less than 36. ksi

Input Check Completed

- 6 warnings were issued.
- Please verify that the input is correct.
- The program will continue running.

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.
 TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.
 When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

SPECIAL #1 - ANALYSIS (cont.)

FACTORED ANALYSIS RESULTS (cont.)

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

FACTORED LATERAL STRESSES

This output report is not applicable because no lateral loads (wind or user input lateral loads) have been entered.

* Legend of General Notes:

Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of $R_b R_h F_y c$ under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, FrF+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacityM+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

Madawaska Minor Stringer CL-625-ONT Lane Inv
SPECIAL #1 - SPECIFICATION CHECKING (cont.)

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

NOTES:

GIVEN DISTRIBUTION FACTOR IS THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR
 USED TO PRODUCE THE GIVEN RATING. FOR THE STR-IP LIMIT STATE, THE VEHICULAR
 LIVE LOAD DISTRIBUTION FACTOR ACCOUNTS FOR THE PRESENCE OF PEDESTRIAN
 LOADS, IF APPLICABLE.

ALL RATINGS ARE BASED ON THE EXCLUSION OF THE DESIGN FUTURE WEARING SURFACE.

SYMBOL DESIGNATION FOR RATING FACTORS:

M - MOMENT RATING FACTOR CONTROLS
 S - SHEAR RATING FACTOR CONTROLS

SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

SPECIFICATION CHECK FAILURES

For the live loadings input by the user, the program encountered one or more specification check failures. The following is a list of output table headings, listed separately for each live loading for which failures have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

SPECIAL #1 - ANALYSIS (cont.)

FACTORED ANALYSIS RESULTS (cont.)

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

FACTORED LATERAL STRESSES

This output report is not applicable because no lateral loads (wind or user input lateral loads) have been entered.

* Legend of General Notes:

Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of $R_b R_h F_y c$ under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, FrF+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacityM+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

Madawaska Minor Stringer CL-625-ONT Lane Oper
 SPECIAL #1 - SPECIFICATION CHECKING (cont.)

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
 (wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of Intermediate Calculations:

Dc = Depth of web in compression

Rh = Hybrid factor

Mr(e) = Flexural resistance in terms of moment, back-calculated from the stress flexural resistance, Fcrw

Fcrw = Nominal bend-buckling resistance, LRFD Specifications 6.10.4.2.2-4

fc = Compression-flange stress calculated without flange lateral bending

N/A = This check is not required for composite sections in positive flexure in which the web satisfies the requirement of LRFD Specifications Article 6.10.2.1.1

Madawaska Minor Stringer CL-625-ONT Lane Oper
 SUMMARY - OVERALL REACTIONS

REACTIONS & ROTATIONS PER GIRDER (UNFACTORED, W/O IMPACT, W/ DISTRIBUTION)
 FOR ELASTOMERIC BEARING PAD DESIGN

Support No.		Minimum Reaction LC (kips)	Maximum Reaction LC (kips)	Live Load Rotation LC (radians)
1	Total DC1	0.87	0.87	
	Total DL	0.87	0.87	
	LL (SPECIAL #1)	0.00	31.83	0.003888
2	Total DC1	0.87	0.87	
	Total DL	0.87	0.87	
	LL (SPECIAL #1)	0.00	31.83	0.003888

Note: Rotation is about an axis normal to the centerline of the beam.
 The rotation value given is the larger of the positive
 rotation and absolute value of the negative rotation due
 to live load.

 Madawaska Minor Stringer CL-625-ONT Lane Oper
 SUMMARY - OVERALL REACTIONS (cont.)

REACTIONS & ROTATIONS PER GIRDER (UNFACTORED, W/ IMPACT, W/ DISTRIBUTION)
 FOR POT, STEEL OR DISC BEARING DESIGN

Support No.		Minimum Reaction LC (kips)	Maximum Reaction LC (kips)	Rotation LC (radians)
1	Total DC1	0.87	0.87	-0.000311
	Total DL	0.87	0.87	-0.000311
	LL (SPECIAL #1)	0.00	31.83	-0.003888
2	Total DC1	0.87	0.87	0.000311
	Total DL	0.87	0.87	0.000311
	LL (SPECIAL #1)	0.00	31.83	0.003888

Note: Rotation is about an axis normal to the centerline of the beam.

 Madawaska Minor Stringer CL-625-ONT Lane Oper
 SUMMARY - OVERALL REACTIONS (cont.)

REACTIONS (UNFACTORED) FOR ABUTMENT DESIGN

DL REACTIONS (UNFACTORED) PER GIRDER

Support No.		Minimum Reaction (kips)	Maximum Reaction (kips)
1	Total DC1	0.87	0.87
	Total DL	0.87	0.87
2	Total DC1	0.87	0.87
	Total DL	0.87	0.87

LL REACTIONS PER LANE (UNFACTORED, W/O IMPACT)

Support No.		Minimum Reaction LC (kips)	Maximum Reaction LC (kips)
1	SPECIAL #1	0.00	53.05
2	SPECIAL #1	0.00	53.05

Note: These values are to be used only if the end supports are abutments. Do not use these values for the pier design at a discontinuous superstructure.

 Madawaska Minor Stringer CL-625-ONT Lane Oper
 SUMMARY - OVERALL REACTIONS (cont.)

REACTIONS (UNFACTORED) FOR PIER DESIGN

DL REACTIONS (UNFACTORED) PER GIRDER

Support No.		Minimum Reaction (kips)	Maximum Reaction (kips)

INVENTORY	Dist. Fact.	0.258
RATING	Loc. (ft)	0.000
(IR)	Limit State	STR-I
	RF	2.05M

Span 1 Beam Type and Size: STEEL PLATE GIRDER 14. inches

SPECIAL #1

OPERATING	Dist. Fact.	---
RATING	Loc. (ft)	---
(OR)	Limit State	---
	RF	---

Maximum Factored Flexural Resistance (kip-ft) 167.83 Span Length(ft) = 19.54
 Location (ft) 2.93

Maximum Factored Shear Resistance (kips) 89.44
 Location (ft) 0.00

NOTES:

GIVEN DISTRIBUTION FACTOR IS THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR USED TO PRODUCE THE GIVEN RATING. FOR THE STR-IP LIMIT STATE, THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR ACCOUNTS FOR THE PRESENCE OF PEDESTRIAN LOADS, IF APPLICABLE.

ALL RATINGS ARE BASED ON THE EXCLUSION OF THE DESIGN FUTURE WEARING SURFACE.

SYMBOL DESIGNATION FOR RATING FACTORS:

M - MOMENT RATING FACTOR CONTROLS
 S - SHEAR RATING FACTOR CONTROLS

Madawaska Minor Stringer CL-625-ONT Lane Oper
SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY
ECONOMIC FEASIBILITY CHECKS

Madawaska Minor Stringer CL-625-ONT Lane Oper
SUMMARY - SPECIFICATION CHECKS (cont.)

SPECIFICATION CHECK FAILURES

For the live loadings input by the user, the program encountered one or more specification check failures. The following is a list of output table headings, listed separately for each live loading for which failures have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

BEARING STIFFENER CHECK

The following are system settings:

STEEL DENSITY/WEIGHT	490. lbf/ft^3	(default)
CONSTRUCT. MODULAR RATIO	*	(computed, if necessary)
INC. FLG. IN HAUNCH WGT.	Y	(default)
AASHTO/PENNDOT SPECS	P	(default)
PRINT DIMENSION FILE	N	(default)

%WARNING - <Input Post Processor>:

The specified yield strength of the web should
be greater than the maximum of 36 ksi or 70 percent
of the specified yield strength of the higher
strength flange. (LRFD 6.10.1.3)
For Material ID No. 1:
Web yield of 30. ksi is less than 36. ksi

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

SPECIAL #1 - ANALYSIS (cont.)

FACTORED ANALYSIS RESULTS (cont.)

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

FACTORED LATERAL STRESSES

This output report is not applicable because no lateral loads (wind or user input lateral loads) have been entered.

* Legend of General Notes:

Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

NOTE: Intermediate values have been moved to a separate output report,
INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS

M+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to
wind or user input effects, A6.10.7.1.1-1

w = Value for M+ includes lateral load effects

** Legend of Resistance Calculation:

Compact Section:

A. $D_p \leq 0.1 \cdot D_t$, M_n calculated using A6.10.7.1.2-1

B. $D_p > 0.1 \cdot D_t$, M_n calculated using A6.10.7.1.2-2

C. Continuous span, M_n calculated using A6.10.7.1.2-3

Appendix A:

D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)

E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)

F. Discretely braced tension flange governs (App A 6.1.2)

G. Continuously braced compression flange governs (App A 6.1.3)

H. Continuously braced tension flange governs (App A 6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of $R_b R_h F_y c$ under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, FrF+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacityM+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

 Madawaska Minor Stringer MaineDOT Trucks 1-4
 SPECIAL #1 - SPECIFICATION CHECKING (cont.)

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
 (wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS (cont.)

* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
F. Discretely braced tension flange governs (App A A6.1.2)
G. Continuously braced compression flange governs (App A A6.1.3)
H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
 from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
 A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
 If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
 input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
 (wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

SPECIAL #3 - ANALYSIS (cont.)

FACTORED ANALYSIS RESULTS (cont.)

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

FACTORED LATERAL STRESSES

This output report is not applicable because no lateral loads (wind or user input lateral loads) have been entered.

INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS (cont.)

* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
F. Discretely braced tension flange governs (App A A6.1.2)
G. Continuously braced compression flange governs (App A A6.1.3)
H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

SPECIAL #3 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

SPECIAL #4 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

OVERALL RATING SUMMARY W/O FWS (cont.)

BRIDGE LOAD RATINGS W/O FWS (cont.)

NOTES:

GIVEN DISTRIBUTION FACTOR IS THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR USED TO PRODUCE THE GIVEN RATING. FOR THE STR-IP LIMIT STATE, THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR ACCOUNTS FOR THE PRESENCE OF PEDESTRIAN LOADS, IF APPLICABLE.

ALL RATINGS ARE BASED ON THE EXCLUSION OF THE DESIGN FUTURE WEARING SURFACE.

SYMBOL DESIGNATION FOR RATING FACTORS:

M - MOMENT RATING FACTOR CONTROLS

S - SHEAR RATING FACTOR CONTROLS

Madawaska Minor Stringer MaineDOT Trucks 1-4
SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

SPECIAL #1

WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY
ECONOMIC FEASIBILITY CHECKS

SPECIAL #2

WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY

SPECIAL #3

WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY

SPECIAL #4

WEB-TO-FLANGE WELD DESIGN: WELD CAPACITY

SUMMARY - SPECIFICATION CHECKS (cont.)

SPECIFICATION CHECK FAILURES

For the live loadings input by the user, the program encountered one or more specification check failures. The following is a list of output table headings, listed separately for each live loading for which failures have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.
 TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.
 When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

SPECIAL #1 - ANALYSIS (cont.)

FACTORED ANALYSIS RESULTS (cont.)

* Legend of General Notes:

N/A* = Since the flexural capacity at this analysis point, limit state, flexure state and flange is moment-governed, the total factored flexural stress is not used for any specification checks and therefore is not applicable.

N/A** = This check is not required or not applicable at this analysis point, limit state, and flexure state.

FACTORED LATERAL STRESSES

This output report is not applicable because no lateral loads (wind or user input lateral loads) have been entered.

* Legend of General Notes:

Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
- B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
- C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
- E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
- F. Discretely braced tension flange governs (App A A6.1.2)
- G. Continuously braced compression flange governs (App A A6.1.3)
- H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

NOTE: Intermediate values have been moved to a separate output report,
INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS

M+ = Mu + (1/3)*fl*Sxt, total factored flexural + lateral moment due to
wind or user input effects, A6.10.7.1.1-1

w = Value for M+ includes lateral load effects

** Legend of Resistance Calculation:

Compact Section:

A. $D_p \leq 0.1 \cdot D_t$, Mn calculated using A6.10.7.1.2-1

B. $D_p > 0.1 \cdot D_t$, Mn calculated using A6.10.7.1.2-2

C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)

E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)

F. Discretely braced tension flange governs (App A 6.1.2)

G. Continuously braced compression flange governs (App A 6.1.3)

H. Continuously braced tension flange governs (App A 6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of $R_b R_h F_y c$ under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, FrF+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacityM+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

 Madawaska Minor Stringer MaineDOT Trucks 5-8
 SPECIAL #1 - SPECIFICATION CHECKING (cont.)

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
 (wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

INTERMEDIATE VALUES FOR MOMENT FLEXURAL CAPACITY CALCULATIONS (cont.)

* Legend of General Notes:

- Dp = Distance from top of concrete deck to neutral axis of the composite section at the plastic moment (A6.10.7.1.2)
Dt = Total depth of the composite section (A6.10.7.1.2)
Rh = Hybrid factor (A6.10.1.10.1)
Rpc = Web plastification factor for the compression flange (App A A6.2.1-4 or A6.2.2-4)
Rpt = Web plastification factor for the tension flange (App A A6.2.1-5 or A6.2.2-5)
Dc = Total depth of the web in compression, per Appendix D6.3.1
Myt = Yield moment to the top flange, per Appendix D6.2
Myb = Yield moment to the bottom flange, per Appendix D6.2

** Legend of Resistance Calculation:

Compact Section:

- A. $Dp \leq 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-1
B. $Dp > 0.1 \cdot Dt$, Mn calculated using A6.10.7.1.2-2
C. Continuous span, Mn calculated using A6.10.7.1.2-3

Appendix A:

- D. Discretely braced compression flange, local buckling governs (App A A6.3.2-1)
E. Discretely braced compression flange, local buckling governs (App A A6.3.2-2)
F. Discretely braced tension flange governs (App A A6.1.2)
G. Continuously braced compression flange governs (App A A6.1.3)
H. Continuously braced tension flange governs (App A A6.1.4)

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

SPECIAL #2 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

SPECIAL #3 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. F_r calculated using AASHTO Equation 6.10.8.2.3-1

B. F_r calculated using AASHTO Equation 6.10.8.2.3-2

C. F_r calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. M_r calculated using AASHTO Equation A6.3.3-1

E. M_r calculated using AASHTO Equation A6.3.3-2

F. M_r calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

$M_r(e)$ = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, F_r

F_+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F_+ prints as N/A, Appendix A calculations govern the LTB capacity

M_+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M_+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F_+ or M_+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

* Legend of General Notes:

TOTAL DC1 INST = the total DC1 stress assuming instantaneous placement of the deck slab and haunch.

TOTAL DC1 DECK POUR = the total DC1 stress at the end of the deck pour analysis.

When computing the total factored stress, STLRFD uses the total DC1 stress (either instantaneous or deck pour) that causes the largest stress in the flanges.

USER INPUT LATERAL STRESSES

This output report is not applicable because no user input lateral loads have been entered.

* Legend of General Notes:

Values that are the same for Article 6.10.8.2.3 and Appendix A

rt = Effective radius of gyration for lateral torsional buckling
(Equations 6.10.8.2.3-9 or A6.3.3-10)

Rh = Hybrid factor (Article 6.10.1.10.1)

Rb = Load shedding factor (Article 6.10.1.10.2)

Dc = Depth of the web in compression (Article D6.3.1)

Lp = Limiting unbraced length to achieve the nominal flexural resistance of RbRhFyc under uniform bending (Equations 6.10.8.2.3-4 or A6.3.3-4)

Values that are different for Article 6.10.8.2.3 and Appendix A

Lr = Limiting unbraced length to achieve the onset of nominal yielding in either flange under uniform bending with consideration of compression-flange residual stress effects (Equations 6.10.8.2.3-5 or A6.3.3-5)

Cb = Moment gradient modifier

(Equations A6.10.8.2.3-6, A6.10.8.2.3-7, A6.3.3-6, or A6.3.3-7)

Values that are specific to Appendix A

Myc = Yield moment with respect to the compression flange (Article D6.2)

Rpc = Web plastification factor for the compression flange
(Article A6.2.1 or A6.2.2)

SPECIAL #4 - SPECIFICATION CHECKING (cont.)

LATERAL TORSIONAL BUCKLING CAPACITY (NONCOMPOSITE OR NEGATIVE FLEXURE) (cont.)

* Legend of Resistance Calculation:

LRFD Specifications Article 6.10.8.2.3

A. Fr calculated using AASHTO Equation 6.10.8.2.3-1

B. Fr calculated using AASHTO Equation 6.10.8.2.3-2

C. Fr calculated using AASHTO Equation 6.10.8.2.3-3

LRFD Specifications Chapter 6, Appendix A

D. Mr calculated using AASHTO Equation A6.3.3-1

E. Mr calculated using AASHTO Equation A6.3.3-2

F. Mr calculated using AASHTO Equation A6.3.3-3

G. Girder skew angle has not been entered. Appendix A provisions have not been checked, but may be applicable

H. Appendix A provisions are not applicable at this location

** Legend of General Notes:

Mr(e) = Flexural resistance in terms of moment, back-calculated from
from the stress flexural resistance, Fr

F+ = $f_{bu} + (1/3) \cdot f_l$, total factored flexural + lateral stress due to wind (per
A6.10.7.2.1-2, A6.10.8.1.1-1, or A6.10.8.1.2-1) and/or user input lateral effects
If F+ prints as N/A, Appendix A calculations govern the LTB capacity

M+ = $M_u + (1/3) \cdot f_l \cdot S_{xt}$, total factored flexural + lateral moment due to wind or user
input effects, A6.10.7.1.1-1

If M+ prints as N/A, 6.10.8.2.3 calculations govern the LTB capacity

w = Value for F+ or M+ includes lateral load effects

FLANGE LATERAL CAPACITY

This output report is not applicable because no lateral loads
(wind or user input lateral loads) have been entered.

NET SECTION FRACTURE CHECK

Not applicable due to absence of section holes

OVERALL RATING SUMMARY W/O FWS (cont.)

BRIDGE LOAD RATINGS W/O FWS (cont.)

NOTES:

GIVEN DISTRIBUTION FACTOR IS THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR USED TO PRODUCE THE GIVEN RATING. FOR THE STR-IP LIMIT STATE, THE VEHICULAR LIVE LOAD DISTRIBUTION FACTOR ACCOUNTS FOR THE PRESENCE OF PEDESTRIAN LOADS, IF APPLICABLE.

ALL RATINGS ARE BASED ON THE EXCLUSION OF THE DESIGN FUTURE WEARING SURFACE.

SYMBOL DESIGNATION FOR RATING FACTORS:

M - MOMENT RATING FACTOR CONTROLS

S - SHEAR RATING FACTOR CONTROLS

Madawaska Minor Stringer MaineDOT Trucks 5-8
SUMMARY - SPECIFICATION CHECKS

SPECIFICATION CHECK WARNINGS

For the live loadings input by the user, the program encountered one or more specification check warnings. Specification check warnings indicate conditions that do not fail a specification check, but may need to be reviewed by the user. The following is a list of output table headings, listed separately for each live loading for which warnings have occurred. It should be noted that the program does not perform specification checking corresponding to commands that have not been input by the user.

(2) HIGHWAY AGENCY DISTRICT	05 - Northern
(3) COUNTY CODE	003 Aroostook
(4) PLACE CODE	42520
(6) FEATURES INTERSECTED	ST JOHN RIVER
(7) FACILITY CARRIED	BRIDGE STREET
(9) LOCATION	0.2 MI N'LY OF JCT US1
(11) MILEPOINT	0.180
(12) BASE HIGHWAY NETWORK	Inventory Route is on the Base Network
(13) LRS INVENTORY ROUTE, SUBROUTE	
(13A) LRS INVENTORY ROUTE	0000302603
(13B) SUBROUTE NUMBER	00
(16) LATITUDE	47.35999
(17) LONGITUDE	-68.32861
(98A) BORDER BRIDGE CODE	CAN - Canada
(98B) PERCENT RESPONSIBILITY	50
(99) BORDER BRIDGE STRUCT NO.	n/a

Structure Type and Material

(43) STRUCTURE TYPE, MAIN	
(43A) KIND OF MATERIAL/DESIGN	3 - Steel
(43B) TYPE OF DESIGN/CONSTR	10 - Truss - Thru
(44) STRUCTURE TYPE, APPROACH SPANS	
(44A) KIND OF MATERIAL/DESIGN	0 - Other
(44B) TYPE OF DESIGN/CONSTRUCTION	00 - Other
(45) NUMBER OF SPANS IN MAIN UNIT	4
(46) NUMBER OF APPROACH SPANS	0
(107) DECK STRUCTURE TYPE	5 - Steel Plate (includes orthotropic)
(108) WEARING SURFACE/PROTECTIVE SYSTEMS	
(108A) WEARING SURFACE	9 - Other
(108B) DECK MEMBRANE	N - NA
(108C) DECK PROTECTION	N - NA

Age of Service

(27) YEAR BUILT	1921
(106) YEAR RECONSTRUCTED	2001
(42) TYPE OF SERVICE	
(42A) TYPE OF SERVICE ON BRIDGE	5 - Highway-pedestrian
(42B) TYPE OF SERVICE UNDER BRIDGE	5 - Waterway
(28) LANES	
(28A) LANES ON THE STRUCTURE	02
(28B) LANES UNDER THE STRUCTURE	00
(29) AVERAGE DAILY TRAFFIC	3648
(30) YEAR OF AVERAGE DAILY TRAFFIC	2014
(109) AVERAGE DAILY TRUCK TRAFFIC	9
(19) BYPASS DETOUR LENGTH	100

Geometric Data

(48) LENGTH OF MAXIMUM SPAN (ft.)	235
(49) STRUCTURE LENGTH (ft.)	949.0
(50) CURB/SIDEWALK WIDTHS	
(50A) LEFT CURB SIDEWALK (ft.)	6.0
(50B) RIGHT CURB SIDEWALK (ft.)	0.5
(51) BRDG RDWY WIDTH CURB-TO-CURB (ft.)	20.7
(52) DECK WIDTH, OUT-TO-OUT (ft.)	21.7
(32) APPROACH ROADWAY WIDTH (ft.)	21.0
(33) BRIDGE MEDIAN	0 - No median
(34) SKEW (deg.)	0
(35) STRUCTURE FLARED	0 - No flare
(10) INV RTE, MIN VERT CLEARANCE (ft.)	14.33
(47) TOTAL HORIZONTAL CLEARANCE (ft.)	20
(53) VERTICAL CLEARANCE OVER BRIDGE ROADWAY (ft.)	14.33
(54) MIN VERTICAL UNDERCLEARANCE	
(54A) REFERENCE FEATURE	N - Feature not a highway or railroad
(54B) MIN VERTICAL UNDERCLEASENCE (ft.)	0
(55) MIN LATERAL UNDER CLEARANCE RIGHT	
(55A) REFERENCE FEATURE	N - Feature not a highway or railroad
(55B) MIN LATERAL UNDER CLEARANCE RIGHT (ft.)	327.76
(56) MIN LATERAL UNDER CLEARANCE (ft.)	99.9

Classification

(112) NBIS BRIDGE LENGTH	Yes
(104) HIGHWAY SYSTEM OF THE INVENTORY ROUTE	1 - Structure/Route is on NHS
(26) FUNCTIONAL CLASSIFICATION OF INVENTORY ROUTE	02 - Rural - Principal Arterial - Other
(100) STRAHNET HIGHWAY DESIGNATION	Not a STRAHNET route
(101) PARALLEL STRUCTURE DESIGNATION	N - No parallel structure
(102) DIRECTION OF TRAFFIC	2-way traffic
(103) TEMP STRUCTURE	
(105) FEDERAL LANDS HIGHWAYS	Not Applicable
(110) DESIGNATED NATIONAL NETWORK	Inventory route not on network
(20) TOLL	3 - On Free Road
(21) MAINTENANCE RESPONSIBILITY	01 - State Highway Agency
(22) OWNER	01 - State Highway Agency
(37) HISTORICAL SIGNIFICANCE	2 - Eligible for National Register

Condition

(58) DECK	4 - Poor Condition (advanced deterioration)
(59) SUPERSTRUCTURE	5 - Fair Condition (minor section loss)
(60) SUBSTRUCTURE	5 - Fair Condition (minor section loss)
(61) CHANNEL & CHANNEL PROTECTION	5 - Bank eroded.. major damage
(62) CULVERT	N - Not Applicable

Load Rating and Posting

(31) DESIGN LOAD	4 - H 20
(63) METHOD USED TO DETERMINE OPERATING RATING	8 - Load and Resistance Factor
(64) OPERATING RATING	0.84
(65) METHOD USED TO DETERMINE INVENTORY RATING	8 - Load and Resistance Factor
(66) INVENTORY RATING	0.65
(70) BRIDGE POSTING	5 - Equal to or above legal
(41) STRUCTURE OPEN/POSTED/CLOSED	A - Open

Appraisal

(67) STRUCTURAL EVALUATION	5
(68) DECK GEOMETRY	2
(69) UNDERCLEARANCES, VERTICAL & HORIZONTAL	N
(71) WATERWAY ADEQUACY	8 - Bridge Above Approaches
(72) APPROACH ROADWAY ALIGNMENT	8 - Equal to present desirable criteria
(36) TRAFFIC SAFETY FEATURE	
36A) BRIDGE RAILINGS:	0 - Does not meet acceptable standards/safety feature is required
36B) TRANSITIONS:	0 - Does not meet acceptable standards/safety feature is required
36C) APPROACH GUARDRAIL	0 - Does not meet acceptable standards/safety feature is required
36D) APPROACH GUARDRAIL ENDS	0 - Does not meet acceptable standards/safety feature is required
(113) SCOUR CRITICAL BRIDGES	3 - Foundations unstable for scour conditions

Proposed Improvements

(75) TYPE OF WORK

(75A) TYPE OF WORK PROPOSED
(75B) WORK DONE BY
(76) LENGTH OF STRUCTURE IMPROVEMENT (ft.)
(94) BRIDGE IMPROVEMENT COST (\$K)
(95) ROADWAY IMPROVEMENT COST (\$K)
(96) TOTAL PROJECT COST
(97) YEAR OF IMPROVEMENT COST ESTIMATE
(114) FUTURE ADT
(115) YEAR OF FUTURE ADT

Navigation Data	

(38) NAVIGATION CONTROL	1 - Navigation control on waterway (bridge
(111) PIER OR ABUTMENT PROTECTION	4 - In place but reevaluation of design
(39) NAV VERT CLEARANCE	34.0
(116) MIN NAVIGATION VERT CLEARANCE, VERT LIFT BRIDGE	0
(40) NAV HORIZONTAL CLEARANCE	228.0

Inspection Notes

Structure Number: 2399

Town: Madawaska

Structure Name: INTERNATIONAL

Inspection Date: 10/28/2016

Structure Notes

Four steel truss spans, two Maine half two Canadian. Concrete piers & abutments. Not inspectable with the UBC because of sidewalk width & utilities. Special note from Boarder Patrol: No pictures can be taken of the facility or officers. Per MeDOT and Boarder Patrol - Always check in and out prior to inspecting the bridge. Proper ID is required to access the USA side, such as MeDOT picture ID and Maine drivers licence. Scott Cyr of the U.S. Customs and Border Protection 207-728-4565 Contact number for Canadian Customs 1-506-739-1820

Wearing Surface

Deck

NBI Item 58: 4

Steel Grid deck on both sides with sidewalks filled with concrete. USA side of bridge has very good grid deck. Canada side has older grid deck with various areas of broken bars and repaired sections. Canada side also has active corrosion of sidewalk stay in place forms.

Superstructure

NBI Item 59: 5

Paint of the superstructure is generally good. There is isolated heavy pitting on the USA side and many floorbeams have been strengthened. The Canada side has extensive deep pitting and scattered section loss on the top flanges of the floor beams. Fracture critical inspection performed on all respective areas and elements.

Substructure

NBI Item 60: 5

The North abutment has fine map cracking throughout. South abutment has been reinforced. The South Pier has large spall with exposed rebar on the nose, but cap has been reinforced, and has scaling around the bearing masonry plates. The shared Pier has moderate map cracking. The North Pier has pattern map cracking with some areas of efflo.

Culvert

NBI Item 62: N

Channel

NBI Item 61: 5

Other

Special Inspection

Monitoring

Pontis Notes

Inspector: Steve Harris

Structure Number: 2399

Inspection Date: 10/28/2016

Facility Carried: BRIDGE STREET
