Note: This document incorporates changes made to Maine EMS’ process for EMT Practical Skills Evaluations (PSEs) as approved by the Maine EMS Board in April 2016.

Questions concerning interpretation, errors or omissions should be directed to the Maine EMS office email maine.ems@maine.gov or to your designated PSE Administrator

The *Revision Information for EMT Exam Guide 2016-05-12* may be found in the Testing section of the Maine EMS web site <http://www.maine.gov/ems/publications/index.html> and contains specific language changes made by Maine EMS concerning the Random Sampling testing model

Welcome

Dear Examination Coordinator: Please note minor adjustments to this Exam process have been made based on recommendations made by NREMT, CDC and AHA for use during the COVID 19 Pandemic.

Thank you for your interest in hosting an Emergency Medical Technician (EMT) psychomotor examination. We are pleased to provide you with this copy of the NREMT's Emergency Medical Technician Psychomotor Examination Users Guide. This comprehensive manual details the suggested aspects of coordinating an EMT psychomotor examination and is designed to assist you in planning for all related aspects of the examination. Additional information concerning national EMS certification for EMTs is located at <http://www.nremt.org>.

The following information reflects years of experience in examination administration. The quality of the examination process is due in part to feedback we have received from Examination Coordinators such as you in the past. As a result of our continuous efforts to improve the examination process and keep it current with out-of-hospital medical care, we proudly present this suggested EMT psychomotor examination as implemented effective November 2011. This material consists of skills presented in a scenario-type format to approximate the abilities of the Nationally Registered EMT to function in the out-of-hospital setting. All skills have been developed in accordance with the 2009 National EMS Education Standards and Instructional Guidelines for the Emergency Medical Technician; the National Trauma Triage Protocol published by the U.S. Department of Health and Human Services Centers for Disease Control and Prevention; and current American Heart Association guidelines for Basic Life Support for Healthcare Providers (BLS) that are updated as necessary. The suggested process outlined is a formal verification of the candidate's "hands-on" abilities and knowledge, rather than a teaching, coaching, or remedial training session. The NREMT strongly advises that specific errors in any performance not be explained or discussed as this is not a responsibility or function of any certification process. A candidate's attendance at a scheduled examination does not automatically guarantee eligibility for National EMS Certification or state licensure. Candidates should also be warned that they assume all risks and consequences of testing inappropriate skills if testing at a site where their name was not read as part of the official examination roster.

This manual describes all suggested aspects related to coordinating an EMT psychomotor examination. As an Examination Coordinator, you assume many responsibilities that are vital to the success of the psychomotor examination process. The quality of your experience with this certification process is directly dependent upon your thorough familiarization with all of the material contained herein. We are committed to assist you to help ensure that all candidates who attend your examination site will be tested in a fair, consistent, objective, and impartial manner in accordance with all suggested policies and procedures of the National Registry of Emergency Medical Technicians® (NREMT) outlined in this manual. Please contact us immediately if we can clarify or answer any questions concerning this process.

The NREMT has copyrighted this material. Only non-commercial reproduction of this material for educational purposes or the advancement of medical science is permitted. All other unauthorized reproductions of this material for any reason whatsoever are subject to penalties in accordance with all copyright laws of the United States of America. We encourage you to distribute copies of all skill evaluation instruments (available at <http://www.nremt.org>) to the students prior to the examination so they may become familiar with the examination expectations well in advance of the actual examination. Likewise, we suggest that you forward a copy of the skill evaluation instrument and essay (included in this document) to the respective Skill Examiner one (1) week prior to the examination to give him/her ample time for familiarization prior to the examination.

In closing, please keep in mind that this material serves only as a guide to facilitate coordination and administration of the Emergency Medical Technician psychomotor examination. State EMS officials may choose to alter the format and design of these materials in order to meet local requirements for state licensure. We encourage you to adhere to any mandated state requirements for administration and coordination of EMT psychomotor examinations. The NREMT will continue to recognize results from state-approved EMT psychomotor examinations, provided they appropriately measure and validate equivalent EMT competencies contained herein.

Thank you again for your interest in hosting an EMT psychomotor examination. We trust that you will find this resource document beneficial and sincerely hope that your psychomotor examination is a successful endeavor for all involved.

Sincerely,

Rob Wagoner

Rob Wagoner, Associate Director

Introduction

This manual was developed a result of the NREMT Board of Directors continued awareness of the need for standardization and uniform criteria for psychomotor examinations. The evolution of psychomotor examinations has been guided by many changes within emergency medical services in the United States. In the spring of 1993, the NREMT Board of Directors convened a meeting of its EMT-Basic Examination Committee to review and revise the current practical examination skill instruments used to assess skills competency at the EMT-Basic level. In conjunction with the development of the 1994 EMT-Basic National Standard Curriculum, the NREMT began peer-review and pilot testing of the proposed evaluation instrument. Following the review and revision process, the staff of the NREMT was directed to develop a revised EMT-Basic Practical Examination User's Guide which would reflect the scope of practice identified in the 1994 EMT-Basic National Standard Curriculum, the National EMS Educational and Practice Blueprint and would include up-to-date skill evaluation instruments as well as criteria for conducting a practical examination.

The NREMT Board of Directors believes that as with all other levels of National EMS Certification, the psychomotor examination should be cost-effective while continuing to assure protection of the public through adequate measurement of minimal skill competencies. They also stressed the importance of keeping our testing philosophies consistent between levels whenever possible. Each of the skills included in the psychomotor examination were chosen based upon the frequency of use in day-to-day, out-of-hospital care as well as the potential of harm they pose to public safety and patient care. When possible, the steps for each skill evaluation instrument were written in observable behavior formats and a point value of 1 point for each observable step was assigned. Critical behaviors were identified for each skill and written out in a "Critical Criteria" section on each skill evaluation instrument. This helped eliminate inconsistencies in scoring that results whenever certain steps were weighted and assigned higher point values than others with no explanation on how to disburse partial credit. In order to improve consistency and inter-rater reliability, each skill evaluation form is accompanied by a detailed essay to help focus the skill examiner on the consistent, proper testing of each skill. Finally, predetermined passing criteria for each skill were established and endorsed by the NREMT Board of Directors.

In 2008 as the drafted National EMS Education Standards were being revised, the NREMT assembled an ad hoc committee from various communities of interest to review the existing NREMT Emergency Medical Technician certification process in October 2008. The committee reviewed the revised Emergency Medical Technician standards and made recommendations for revising the National EMS Certification process for Emergency Medical Technicians. Members of this committee included:

- Bob Graff, Director, Office of EMS, South Dakota Department of Health
- Dan Manz, Director, EMS Division, Vermont Department of Health
- Mary Beth Michos, Chief, Executive Director, IAFC, Past NREMT Chair
- Leann Domonoske, Ambulance Coordinator, Wilton Boro Ambulance District, ND
- David Burns, Department for EMS Education, Center for Emergency Response Training, University of South Alabama, Mobile, AL
- Linda Pace, EMS Instructor/Program Coordinator, Rio, WI
- Carlos Falcon, MD, Chair Iowa EMS Advisory Council
- John E. Manley, State Training Coordinator, Oklahoma State Department of Health
- William E. Brown, Jr., RN, MS, NREMT-P, NREMT Executive Director
- Gregg Margolis, PhD, NREMT-P, NREMT Associate Director
- Gabriel Romero, MBA, NREMT-P, NREMT Examination Coordinator
- Rob Wagoner, BSAS, NREMT-P, NREMT Associate Director

The Committee urged the NREMT to develop an enhanced, comprehensive Emergency Medical Technician Users Guide similar to one that has been in use for years for NREMT-Basic certification. This manual provides for a structured, organized approach to conducting a psychomotor examination. The Committee reviewed the drafted EMT Education Standards and identified skills that represent critical competencies necessary for the EMT to demonstrate in order to help assure that safe and effective care will be provided to patients in their time of need. The Committee agreed to continue the format of NREMT skill evaluation forms with accompanying essays that were initially implemented in 1991. The materials included in this guide represent the latest refinement in psychomotor evaluations that we have undertaken since 1991.

The NREMT was sensitive to input requesting that the NREMT develop an administratively feasible and cost-effective psychomotor examination. The following factors were carefully considered as these materials were developed and approved for this guide:

1. Helping to assure protection of the public is the primary responsibility of the NREMT certification process.
2. Approved EMT educational programs include scheduled state-approved psychomotor skills sessions that meet or exceed the National EMS Educational Standards.
3. Approved EMT educational programs or the state are responsible for attesting to the competency of candidates who seek National EMS Certification. Candidates who are deemed less-than-competent by the approved educational program should not be permitted entry to the National EMS Certification process.
4. In order to help assure protection of the public, verification of psychomotor competencies for National EMS Certification should be accomplished by agencies or individuals not directly associated with the approved educational program's graduates.

In June 2009, the ad hoc NREMT Psychomotor Examination Revision Committee met in Chicago, IL to complete development of the revised NREMT psychomotor examination process as identified in 2008. Members of this committee included:

- Kenneth Navarro, Assistant Professor UT Southwestern Medical Center, Dallas, TX
- Jon Politis, MPA, NREMT-P, Chief, Colonie EMS, NY
- Alex Butman, BA, DSc, NREMT-P, Fairlawn, OH
- William Clark, MD, State EMS Medical Director, Baton Rouge, LA
- Gabriel Romero, MBA, NREMT-P, NREMT Examination Coordinator
- Rob Wagoner, BSAS, NREMT-P, NREMT Associate Director

After reviewing the drafted materials, the proposed EMT psychomotor examination was reviewed by the NREMT Standards & Examination Committee and approved by the NREMT Board of Directors in November 2010 for implementation effective September 2011. It was felt that this schedule for release best fit with implementation of the new EMT level for National EMS Certification as well as AHA Guidelines 2010 for CPR and Emergency Cardiovascular Care beginning January 1, 2012.

The Maine revision of the sample NREMT psychomotor examination outlined in this guide contains four (4) skills. When using this sample psychomotor examination for National EMS Certification, all candidates should be tested over the four (4) skills outlined. The administrative details of when, where and who coordinates/delivers the exam can vary (state oversight, program delivery with state oversight, etc.), but each candidate must demonstrate acceptable competence in these identified skills. Each candidate who seeks National EMS Certification as an Emergency Medical Technician must have successfully completed the measurable elements for each of the skills identified in this guide.

The NREMT remains committed to establishing standardized, valid psychomotor examination processes that can be utilized across this nation. To that end, extensive work has been accomplished in revising the NREMT psychomotor examinations to coincide with implementation of the 2009 National EMS Education Standards. Rob Wagoner, NREMT Associate Director, should be recognized for his tireless efforts and dedication at seeing these extensive projects through to completion.

Examination Coordinator Responsibilities All exams conducted during the COVID-19 will be conducted in accordance with the safety measures described by Maine CDC and the Office of the Governor. Each training center will develop a plan and make that available to Maine EMS for review when submitting the exam request.

The Examination Coordinator is responsible for the overall planning, staffing, implementation, quality control and validation of the psychomotor examination process in conjunction with the State EMS Official or approved agent. **The Examination Coordinator is responsible for the following upon approval by the State EMS Office or its agents:**

- Conducting examination-related activities on an equal basis for all candidates, paying particular attention to eliminate actual or perceived discrimination based upon race, color, national origin, religion, gender, age, disability, position within the local EMS system, or any other potentially discriminatory factor. The Examination Coordinator must help ensure that each Skill Examiner conducts himself/herself in a similar manner throughout the examination.
- Coordinating the examination with an approved agent to oversee administration of the psychomotor examination.
- Maintaining a reservation list of candidates who will be attending the psychomotor examination. The reservation list must include name, call-back phone number, and portion(s) of the examination that each candidate needs to complete. This will help the Examination Coordinator to appropriately plan, staff, and set-up the facilities to help assure a smooth examination. If the examination is postponed or canceled, the Examination Coordinator is responsible for the immediate notification of all candidates, Skill Examiners and State EMS Officials.
- Assuring that the approved State EMS Official or agent receives a copy of the final reservation list of candidates registered for the psychomotor examination by the appropriate cut-off date prior to the scheduled examination.
- Ensuring that the facilities for the psychomotor examinations meet the National Registry and acceptable educational standards.
- Selection of qualified Skill Examiners. At a minimum, each examiner must be certified or licensed to perform the skill that he/she is to evaluate.
- Simulated Patients will not be used. Under COVID 19 Low Fidelity simulation manikins that are the size of an adult or adolescent who are greater than sixteen (16) years of age will be used for Trauma and Medical assessment stations to assure consistency and fairness to all exam candidates statewide as simulated live patients will not be used. The examiner will provide all cues.
- Obtaining clean, functional, and required equipment for each skill and ensuring that all equipment is operational (See Appendix D). Equipment list has been adjusted to reflect COVID-19 requirements.
- Overseeing the timely flow of all candidates through the skills in conjunction with the State EMS Official or approved agent.
- Ensuring that excessive "hall talk" between candidates or discussing specific examination scenarios or material does not occur throughout the examination.

The Examination Coordinator must be present at the site during the examination. The Examination Coordinator may not serve as a Skill Examiner during the examination. If the Examination Coordinator is not able to be present at the examination due to unforeseen circumstances, he/she must assign a competent, informed, and capable person to coordinate all examination activities in his/her absence. In such a case, this person shall serve as and assume all responsibilities of the “Examination Coordinator” throughout the examination.

Examination Coordinator’s Timeline

The following timeline has been developed to assist the Examination Coordinator with planning the examination:

TIMELINE TO COORDINATE EMT PSYCHOMOTOR EXAMINATION

Exam Location: _____ Exam Date: _____

Time Frame Prior to Exam	Action
3 to 4 weeks minimum	<ul style="list-style-type: none"> <input type="checkbox"/> Secure commitment from State EMS Official or approved agent to administer the psychomotor examination <input type="checkbox"/> Secure facilities to host psychomotor examination
2 weeks	<ul style="list-style-type: none"> <input type="checkbox"/> Expect to receive initial contact from State EMS Official or approved agent assigned to administer your examination. If not, call him/her to reconfirm availability. <input type="checkbox"/> Take reservations from all candidates <input type="checkbox"/> Fill-out reservation list completely
1 week	<ul style="list-style-type: none"> <input type="checkbox"/> STOP TAKING RESERVATIONS!! <input type="checkbox"/> Forward the completed reservation list to the State EMS Official or approved agent <input type="checkbox"/> Secure commitments from all Skill Examiners. Be sure to plan on 1 or 2 extra Skill Examiners just in case of unexpected emergencies on examination day. <input type="checkbox"/> Gather all equipment and supplies <input type="checkbox"/> Re-confirm facilities will be available for the psychomotor examination as previously planned <input type="checkbox"/> Send a reminder (letter or email) to all Skill Examiners. Include a copy of the Skill Essay and Evaluation Form for each Skill Examiner, as well as a parking pass, map, etc. <input type="checkbox"/> Expect to receive contact from the State EMS Official or approved agent to confirm exam location(s), time(s), and exam material needs based on the number of candidates expected to test. If not, call him/her to verify that he/she will show-up “at the right place at the right time with the right stuff” for the examination.
1 day	<ul style="list-style-type: none"> <input type="checkbox"/> Set-up all skills if possible

Requesting to Host the Psychomotor Examination

A request to host the EMT psychomotor examination must be communicated with the State EMS Official or approved agent in accordance with current policies and procedures. It must be received from an approved requesting agency or institution within the specified timelines. Please contact your State EMS Office or approved agent for more specific details on how to request the psychomotor examination, what type of confirmation to expect when the request has been approved, and any additional responsibilities.

Maintaining a Reservation List of Candidates - **During COVID-19 the maximum number of people in the same place may not exceed the Maine CDC and Office of the Governor requirements in effect at the time of the conduct of the exam.**

The EMT Examination Reservation List printed in Appendix A of this manual has been developed to assist in gathering information from all candidates who will be attending the examination. It is imperative that all information is obtained from every candidate who contacts the Examination Coordinator to test at the site and it is entered on the reservation list completely. Examination materials are prepared based on this information. Therefore, it is vital to submit the final reservation list by the cut-off date so that the appropriate materials can be prepared for administration of the examination.

The Examination Coordinator is solely responsible for maintaining a reservation list of all candidates who will be attending the examination. Every candidate who is planning on attending the examination site must be listed on the "Reservation List" (see Appendix A). A copy of this completed reservation list must be submitted to the State EMS Official or approved agent by the appropriate deadline, usually one (1) week in advance of the scheduled examination date. All examination materials for that particular exam are prepared **based solely upon this reservation list. The State EMS Office or approved agent will not be responsible for candidates who must be dismissed from an examination site when the Examination Coordinator did not submit that candidate's information on the reservation list by the deadline for the examination.** It is imperative that the completed and final reservation list is forwarded by the due date or the examination may be subject to postponement.

Many Examination Coordinators cannot resist the temptation to add several people after the deadline has passed, especially for those candidates who only need to test a portion of the psychomotor examination. Although the Examination Coordinator's intentions may be good, the result is often chaotic and most adversely affects the candidate whom the Examination Coordinator was trying to help in the first place. All candidates must meet specific eligibility requirements, retesting requirements, and so forth that may not be easily verified with the State EMS Office from the examination site. Therefore, if a candidate is not listed on the final reservation list for the examination that was communicated to the State EMS Official or the approved agent, the candidate may be at risk for dismissal from the examination site. **In any case, the State EMS Office or approved agent will not be responsible for any candidate who does not complete the appropriate portion(s) of the examination if he/she was not listed on the final reservation list for that examination.** The candidate bears full responsibility for completing all appropriate portions of the examination in accordance with currently approved state policies and procedures.

If this is the first National Registry EMT psychomotor examination being coordinated, we recommend that no more than thirty (30) candidates be tested. Up to fifty (50) candidates can be tested on the same day but skills must be duplicated in order to accommodate this number within a reasonable time period. Unless there is ample experience in coordinating National Registry examinations, we do not recommend testing fifty (50) or more candidates on a single day. **During COVID-19 the maximum number of people in the same place may not exceed the Maine CDC and Office of the Governor requirements in effect at the time of the conduct of the exam.**

After materials are prepared, the State EMS Official or approved agent should contact the Examination Coordinator to confirm that he/she will show up “at the right place at the right time with the right stuff” to administer the examination. This is a final “safety check” to help ensure that no “surprises” occur on the date of the scheduled examination.

Equipment

The Examination Coordinator is responsible for obtaining and setting-up the various skills on the day prior to the scheduled psychomotor examination if possible. If it is not possible to set-up all skills the day before the psychomotor examination, the Examination Coordinator must at least verify the availability of all equipment that is considered to be the minimal essential equipment needed. An equipment list for the psychomotor examination is included in Appendix D of this manual to help with psychomotor examination coordination. Additionally, each Skill Examiner will need a watch with a second hand, pen, copy of the respective “Essay to Skills Examiner,” and a supply of skill evaluation forms to document each candidate’s performance. A sufficient supply of the EMT Psychomotor Report Form found in Appendix E will also need to be available so that each candidate’s results may be tabulated and reported.

Facilities for the Psychomotor Examination

The Examination Coordinator is responsible for securing a facility large enough to accommodate the number of candidates scheduled to attend the psychomotor examination. Each facility utilized for the psychomotor examination should provide: **All space and set up requirements will ensure minimum social distancing of at least 6 feet and must be in compliance with the Maine CDC and Office of the Governor requirements in effect at the time of the conduct of the exam. The specifics will be detailed in the sponsoring training center plan submitted to Maine EMS with the exam approval request.**

1. Adequate space to offer a minimum of 100 square feet for each of the skills. Each area shall be partitioned in such a manner to allow easy entrance and exit by the candidates and prohibit observation by other candidates and non-involved personnel. Entrance to, and exit from, all skills should not disturb other candidates who are testing.
2. A comfortable testing environment free of undue noise and distraction.
3. Ample gathering space for candidates during the candidate orientation to the psychomotor examination.
4. Adequate and effective heating, cooling, ventilation, and lighting.
5. A waiting area adjacent to the skills for candidates to assemble while waiting for skills to open.
6. Adequate restroom facilities, a drinking fountain and adequate parking with reasonable access to the examination site.
7. Adequate space for the Skill Examiners Orientation to the Psychomotor Examination, including any Simulated Patients. This space should visually and audibly prohibit observation by the candidates.
8. Adequate security of all examination materials during the examination.
9. Skills should be appropriately posted or marked. One set of signs to post at each skill is provided in Appendix B of this guide.
10. A table and chair in each room for Skill Examiners. The Examination Coordinator may also want to provide each Skill Examiner with a clipboard and a pen to assist with documenting all performances. Each Skill Examiner should also have a copy of the appropriate essay and a sufficient supply of skill evaluation forms on which to document all performances.
11. A secure room adjacent to the skills with one or several large tables that will facilitate tabulation and reporting of the psychomotor examination results.

Staffing for the EMT Psychomotor Examination

An examination for twenty (20) candidates requires the minimum staffing as previously outlined to complete the examination within four (4) to five (5) hours. If all skills are duplicated, the psychomotor examination should be completed in half the projected time or twice the number of candidates can be expected to complete the examination in the same amount of time.

The following chart should assist the Examination Coordinator in staffing to administer the psychomotor examination for 20 candidates: **The number of candidates at an exam at any one time will be dictated by the COVID-19 Maine CDC and Office of the Governor guidance. No person will role play the simulated patient, only low fidelity manikins will be used. No persons will act as an EMT assistant.**

EXAM

STAFF FLOW

EMT SKILLS

	Skill Examiner	EMT Assistant	Simulated Patient	Average # of Candidates Evaluated per Hour
1. Patient Assessment/Management – Trauma	1		1	4
2. Patient Assessment/Management – Medical	1		1	3 to 4
3. BVM Ventilation of an Apneic Adult Patient	1			4 to 5
4. Oxygen Administration by Non-rebreather Mask				
5. Cardiac Arrest Management/AED	1			4
6. Spinal Immobilization (Supine Patient)Not test	1	1	1	4
7. Other Random EMT Skills	1	1	1	4 to 5

TOTAL STAFF			OVERALL FLOW
6	2	4	4 per HOUR

Physician Medical Director

At a minimum, the Physician Medical Director for the examination must be available by phone or pager throughout the examination. If the Program Physician Medical Director is not available on the day of the examination, the Examination Coordinator must obtain a substitute Physician Medical Director who will at least be available by phone or pager throughout the examination.

The Physician Medical Director, along with the Examination Coordinator and the State EMS Official or approved agent, serves as one (1) of the three (3) members of the Quality Assurance Committee for the psychomotor examination. This Committee is responsible for:

1. Reviewing and rendering official and final decisions for all candidate complaints in the psychomotor examination.
2. Reviewing and rendering official and final decisions in cases where a specific performance, treatment protocol, or other situations arise in which the State EMS Official needs assistance to objectively make a final determination.

The NREMT encourages physician involvement with the NREMT Psychomotor Examination process. The physician may serve as an excellent resource throughout the examination. Most Physician Medical Directors are qualified to serve as a Skill Examiner in any skill. His/her involvement increases the credibility of the certification process as well as provides an opportunity to observe the abilities of those who may soon be functioning under his/her medical oversight.

EMT Assistants – will NOT be used during COVID-19. Candidates will verbalize what the assistants would do.

Two (2) persons must be selected to serve as the EMT Assistant in each of the Random “A” and Random “B” stations. These selected individuals must be licensed EMTs at a minimum and will serve as the trained partners for all candidates testing. EMT Assistants cannot be a relative of any candidate or be biased towards any candidate being examined. Candidates may not be tested in pairs to eliminate the necessity of selecting EMT Assistants for the psychomotor examination.

Selection of Simulated Patients – will NOT be used during COVID-19. Low fidelity manikins will be used.

Up to four (4) persons should be selected to serve as Simulated Patients for the psychomotor examination. One person will be assigned to the Patient Assessment/Management – Trauma skill; the second will be assigned to the Patient Assessment/Management – Medical skill; the third will be assigned to the Random “A” station if Bleeding Control/Shock Management skill; and the fourth assigned to the Random “B” station as all random skills in that station require a simulated patient. If any of these skills are duplicated, you will need one (1) additional Simulated Patient for each additional skill. A high fidelity simulation manikin capable of responding as a real patient given the approved scenario(s) may be used as the Simulated Patient in the Patient Assessment/Management – Trauma and Patient Assessment/Management – Medical skills.

All Simulated Patients should be EMS-related personnel and we suggest using certified EMS professionals (EMR or higher) at a minimum for all Simulated Patients. If the patient is familiar with EMS procedures, he/she can assist the Skill Examiner when reviewing the candidate's performance and can verify completion of a procedure or treatment. The Simulated Patient should also be familiar with the typical presentation of symptoms the usual patient would complain given the testing scenario utilized. The Simulated Patient should be capable of being programmed to effectively act out the role of a real patient in a similar out-of-hospital situation, such as simulating sonorous respirations, withdrawing to painful stimuli, moaning to palpation over injuries, and so on. Keep in mind that the more realistic the Simulated Patient presents, the fairer the evaluation process.

All Simulated Patients should be adults or adolescents who are greater than sixteen (16) years of age. All Simulated Patients should also be of average adult height and weight. Small children may not serve as

patients in any skill. The equipment provided for the skills should appropriately fit the respective Simulated Patient. In the Patient Assessment/Management – Trauma and Patient Assessment/Management – Medical skills, the Simulated Patients should be instructed to wear appropriate undergarments (shorts or swimsuit) and cut-away clothing should be provided. If prepared cut-away clothing is not available (Velcro® sewn into the seams of pants and shirt), one set of clothing should be cut along the seams and taped closed for each candidate. It is not necessary to have enough clothing for each candidate to actually cut away a fresh set of clothes.

Please be aware of Simulated Patient fatigue throughout the examination. If large numbers of candidates are anticipated, you may also want to consider securing additional Simulated Patients for the examination even if skills have not been duplicated. For the comfort of the Simulated Patient a mat may be used on hard floors.

Roster for Skill Examiners and Simulated Patients

A roster to keep track of Skill Examiners and Simulated Patients is included in Appendix C of this manual to help you coordinate the psychomotor examination.

Budget

The funds required to conduct a psychomotor examination will vary. The exact cost will depend on the availability of volunteers to staff the examination and the degree of other community support, such as donations of facilities, supplies, etc. To help control costs, you may want to consider borrowing equipment from local EMS agencies, medical facilities, local equipment suppliers, manufacturer representatives, and so on.

Running an Efficient Psychomotor Examination

The psychomotor examination consists of seven skills. Each skill is designed to approximate the out-of-hospital setting by presenting realistic situations that the EMT can expect to see. Each candidate is tested individually in each skill and is responsible for communicating with the patients or bystanders. The candidate should pass or fail based solely on his/her actions and decisions.

The following is a list of the skills to be completed and the maximum time limits permissible for each skill: The maximum time limits for each station has been increased by 5 minutes to allow for the verbalization required to complete the exam

SKILL	MAXIMUM TIME LIMIT
Patient Assessment/Management – Trauma	10 minutes 15min
Patient Assessment/Management – Medical	15 minutes 20 min
Bag-Valve-Mask Ventilation of an Apneic Adult Patient	10 minutes 15 min
Oxygen Administration by Non-rebreather Mask	10 minutes 15 min
Cardiac Arrest Management/AED	10 minutes 15 min
Spinal Immobilization (Supine Patient) Not evaluated during COVID-19	10 minutes
Other Random EMT Skills	10 minutes 15 mins

The Examination Coordinator, in conjunction with the State EMS Official or approved agent, is responsible for the timely flow of candidates through all skills. It is imperative to promptly begin the psychomotor examination at the scheduled time or you will add unnecessary stress to the candidates. It is best to schedule the Skill Examiners Orientation one-half (½) to one (1) hour before scheduling candidates to arrive at the examination site. This should permit ample opportunity for orientation of all examiners; time for each examiner to thoroughly read the specific skill essay, instructions, and review the specific skill evaluation form; briefing and moulaging of the low fidelity mannequins as Simulated Patients will not be used; checking all equipment for the examination and assuring proper sanitation and time for the State EMS Official or approved agent to individually address any areas in question before actual evaluation of any candidate begins. **If this is the first EMT psychomotor examination you have coordinated, we strongly advise permitting one (1) full hour for the Skill Examiners Orientation before requiring candidates to arrive at the examination site. Each examiner will be provided with an individual copy of the examiner orientation instructions and will read these or will watch a prepared video of these instructions to limit contact with any exam personnel.**

After the Skill Examiners have been oriented, the State EMS Official or approved agent should meet with all candidates registered for the examination and provide the candidates with an orientation to the psychomotor examination. All candidates should complete any additional required paperwork before beginning the examination. The candidate orientation process to the psychomotor examination should take approximately twenty (20) to thirty (30) minutes.

At this point, actual evaluation of the candidates can begin. We have found that a grid and pass card (hall pass) system is perhaps the easiest and most effective method of controlling the timely flow of all candidates through the skills. This system helps minimize excessive noise which may affect skill performances, requires all candidates to assemble in one waiting area between skills, controls the candidates from discussing specific examination-related information, and provides the Examination Coordinator and the State EMS Official or approved agent with immediate feedback on the progress of the examination at any time. The State EMS Official or approved agent will be visiting all skills as the psychomotor examination begins to ensure fairness, consistency, and adherence to all requirements for the examinations. **This visit will comply with proper social distancing, masking, hand hygiene, etc. and must be in compliance with the Maine CDC and Office of the Governor requirements in effect at the time of the conduct of the exam.** The State EMS Official or approved agent will observe the interaction between all Skill Examiners and candidates during actual evaluation to help ensure the evaluations are in accordance with the examination criteria. The Examination Coordinator or his/her designee should ensure that candidates do not discuss specific examination information throughout the examination. The Examination Coordinator or his/her designee is responsible for reporting any discussions that may have occurred between candidates if these discussions are believed to have resulted in an unfair advantage or inequality among the candidates. This should be communicated immediately to the State EMS Official or approved agent.

Candidates perhaps understand the flow through the psychomotor examination if it is explained that the psychomotor examination will be conducted like a mass casualty incident exercise. **There is a staging area in which all candidates should wait. This area will be in compliance with the Maine CDC and Office of the Governor requirements in effect at the time of the conduct of the exam. A single Staging Officer is responsible for directing all candidates to treat various patients. Each skill that is set-up that day should have a pass card (hall pass) assigned to it. To reduce possible contamination – no hall passes will be used. Another, non-contact means of communicating location must be employed such as a white board/sign or an individual handout for each candidate.**

The card should identify the name of the skill and location (room number). The candidate is dispatched and handed a pass card (hall pass) to permit him/her to test that skill. As soon as the patient is treated, the

candidate should report back to the staging area, turn-in the pass card, and wait to be dispatched before reporting to the next skill. By using a completed copy of the examination reservation list (see Appendix A), the Staging Officer can check-off and keep a running tally of skills completed by each candidate. Several break cards should also be available to control the number of candidates on break at any given time.

Copies of the skill instructions and evaluation forms are provided in this manual and can be posted in this waiting area for the candidates to review before reporting to the skill, provided this is also acceptable to the State EMS Official or approved agent.

Administration of the Psychomotor Examination – visiting of any station for any reason will be in compliance with the Maine CDC and Office of the Governor requirements in effect at the time of the conduct of the exam.

The State EMS Official or approved agent's primary responsibility in administration of the psychomotor examination is to ensure that all candidates complete the examination in the same standardized format in accordance with approved policy and procedure.

The State EMS Official or approved agent should initially visit all skills as soon as possible after the psychomotor examination begins to ensure that everything is progressing satisfactorily and according to the approved examination criteria. As the State EMS Official or approved agent enters each skill, he/she should pay attention to the set-up of the skill, equipment, moulage, and the actions of the Skill Examiner and Simulated Patient. In particular, he/she will note the following:

- Is the testing environment comfortable for you if you were testing?
- Is there any unnecessary noise or distraction that may affect a candidate's performance?
- If more than one skill is being tested in a single room, is the room too noisy or could a candidate's entrance to or exit from the room possibly affect another's performance? **During COVID-19 Only one station per room will be permitted.**
- Is all the required equipment available and functioning properly?
- **Is the required Simulated Patient manikin present in the skill?**
- Does the moulage realistically approximate a real patient's injuries given the scenario?
- Has anything been altered from the normal manner in which the skill is to be performed?
- Is the Skill Examiner reading the "Instructions to the Psychomotor Skills Candidate" and scenario information exactly as printed in the materials you provided?
- Is the Skill Examiner's verbal and non-verbal communication appropriate for a certification examination?
- Are candidates able to observe any scenario information or documentation the Skill Examiner is making?
- Is the Skill Examiner appropriately maintaining security of all examination materials?
- Is the Skill Examiner keeping track of time and enforcing all time limits?
- Are all personnel involved with administration of the psychomotor examination acting in a courteous, professional, non-discriminatory and non-threatening manner?

The State EMS Official or approved agent should observe each Skill Examiner during an actual evaluation of a candidate to detect errors in Skill Examiner "objectivity" while observing and recording the candidate's performance in accordance with approved examination criteria. If any errors are detected, the State EMS Official or approved agent should then thoroughly brief the Skill Examiner as to what constitutes "objectivity." The State EMS Official or approved agent should continue observing the Skill Examiner to ensure that the problem has been corrected. The State EMS Official or approved agent should ensure that all Skill Examiners are conducting their skills in accordance with approved policy and procedure before the results can be scored and same-day retests are offered.

The State EMS Official or approved agent should critically review all skill evaluation forms the Skill Examiner has completed up until that point. The State EMS Official or approved agent should be especially cautious for:

- Any areas on the form that the Skill Examiner left blank.
- Comments written by the Skill Examiner do not support the points awarded or deducted.
- Areas of confusion or contradiction.

If there are any errors or omissions, the State EMS Official or approved agent should discuss these findings with the Skill Examiner for explanation, clarification, and correction. If it is determined that the Skill Examiner made any errors in scoring, the Skill Examiner should make any necessary corrections to the evaluation form and initial any changes he/she makes. The State EMS Official or approved agent should observe him/her for the next evaluation until the situation has been corrected before moving on to check the next skill. Reviewing the completed documentation will help provide many clues to any difficulty the Skill Examiner may have. Therefore, it is best to leave all completed skill evaluation forms in the room until the State EMS Official or approved agent has managed to visit every Skill Examiner and review his/her documentation and conduct.

The “Essay to the Skill Examiners” was developed to work in conjunction with the skill evaluation form. The State EMS Official or approved agent should observe the Skill Examiner and review all documentation. Does it appear as though the Skill Examiner has read the essay? Often times confusing documentation and alterations in the delivery of the skill is the direct result of not thoroughly reading the essay. The State EMS Official or approved agent should also make sure that the Skill Examiner’s documentation, points awarded, and “Critical Criteria” support rather than contradict each other. There are hundreds of harmful actions that could occur which relate to relatively few “Critical Criteria” statements. Has the Skills Examiner deducted any points that may relate to potentially harmful care but not checked and documented the related “Critical Criteria” statement? If so, the State EMS Official or approved agent should question the Skills Examiner to provide clarification and direct the Skills Examiner to make any necessary corrections to the skill evaluation form.

Most questions that may arise in any skill and the usual areas of confusion are addressed in the “Essay to the Skill Examiners” for that particular skill. The essays were developed to work in conjunction with the skill evaluation forms. The better the Skill Examiner knows the information in the essay, the better he/she will be prepared to answer questions and provide clarification. As a general rule, the answer to the vast majority of questions that arise during the psychomotor skill can be found in the respective essay.

Only after the State EMS Official or approved agent has checked every skill and is satisfied that the examination is progressing in accordance with NREMT and state-approved criteria should he/she consider scoring the results and tabulating retest needs. **During COVID-19 to limit personnel, no runners will be used. The state exam administrator will pick up all skills sheet.** At this point, a trustworthy person should be assigned to periodically collect all completed skill evaluation forms and return them to the State EMS Official or approved agent in a private grading room for scoring. This “runner” should be advised of the need to maintain strict security of all results. The “runner” is not permitted to discuss any specific results, scores, or documentation with anyone. It is best to inform the Examination Coordinator that results are now being scored and require that any Skill Examiner with a question come to the State EMS Official or approved agent for clarification rather than leaving the grading room with all results lying out.

General Responsibilities

The State EMS Official or approved agent is responsible for the following to help ensure a smooth-flowing examination:

- The State EMS Official or approved agent, Examination Coordinator, Skill Examiners, and all other staff must conduct all aspects of the examination in a courteous and professional manner at all times.
- The State EMS Official or approved agent is responsible for showing up *promptly* and beginning

the examination at the scheduled time without causing delay.

- The State EMS Official or approved agent must ensure that all candidates complete the psychomotor examination in the same standardized format. Administration of any part of the examination in any manner different than other candidates constitutes an examination accommodation. All Basic Level examinations are administered by the State EMS Office or approved agents. Candidates need to contact the State EMS Office for information about requesting accommodations. **You are not authorized to make any determination for accommodations at the examination site.** You must notify the State EMS Office immediately if any such requests are received at the examination site.
- The State EMS Official or approved agent must politely and attentively deal with each candidate's concerns throughout the examination. The State EMS Official or approved agent must also ensure that the Examination Coordinator and Skill Examiners conduct themselves in a similar manner.
- The State EMS Official or approved agent must inspect all facilities for the psychomotor examination to ensure their adequacy. All facilities must be in compliance with those outlined under the "Facilities for the Psychomotor Examination" section of this manual (see p. 13).
- The State EMS Official or approved agent is responsible for controlling and overseeing administration of the psychomotor examination.
- The State EMS Official or approved agent is responsible for appropriately dealing with cases of dishonesty or any other irregular occurrences during administration of the psychomotor examinations.
- The State EMS Official or approved agent is responsible for calling the roll of all registered candidates for the psychomotor examinations and appropriately recording the candidate's attendance on the official roster accordingly (✓ if present, "N/S" if no show).
- The State EMS Official or approved agent is responsible for overseeing and controlling all related aspects of psychomotor examination administration.
- The State EMS Official or approved agent is responsible for orienting all candidates to the psychomotor examination by reading all printed instructions (see p. 31). During COVID-19 each candidate will receive their own individual copy of the candidate instructions, will be responsible for reading the instructions and will be given an opportunity to ask questions and receive answers by the state exam administrator prior to beginning their exam process. This will process will allow the exam to flow smoothly and will limit the number of candidates at the exam facility to have staggered start times.
- The State EMS Official or approved agent is responsible for assuring identity of all candidates for the psychomotor examination with an official form of photo identification (government-issued identification, such as a driver's license).
- The State EMS Official or approved agent is responsible for orienting all Skill Examiners to the psychomotor examination by reading all printed instructions (see p. 27). During COVID-19 skill examiners will be provided with a copy of the printed instructions to read on their own to limit exposure. All examiners will be given opportunity to ask questions of the state exam administrator before beginning their examiner duties.

- The State EMS Official or approved agent must ensure that all Skill Examiners and other staff conduct themselves in a professional manner throughout the examination.
- The State EMS Official or approved agent must initially visit all skills as soon as possible after the psychomotor examination begins to ensure that everything is progressing satisfactorily and according to NREMT and state-approved criteria.
- - The State EMS Official or approved agent must observe each Skill Examiner during an actual evaluation to detect errors in "objectivity" while observing and recording the candidate's performance according to NREMT and state-approved criteria. This will be done in compliance with the Maine CDC and Office of the Governor requirements in effect at the time of the conduct of the exam, to assure proper social distance and reduce exposure. If any errors are detected, the State EMS Official or approved agent must then thoroughly brief the Skill Examiner as to what constitutes "objectivity." The State EMS Official or approved agent must continue observing the Skill Examiner to ensure that the problem has been corrected. If the State EMS Official or approved agent continues to question the Skill Examiner's "objectivity," the State EMS Official or approved agent must notify the Examination Coordinator and dismiss the Skill Examiner in question.
- The State EMS Official or approved agent oversees administration of the complaint procedure and acts as a member of the Quality Assurance Committee.
- The State EMS Official or approved agent is responsible for dealing with instances of any irregular behavior during the examination, such as threats made towards any staff (including all personnel who are assisting with administration of the EMT psychomotor examination), the use of unprofessional (foul) language, or any other irregular behavior that may occur in connection with the administration of the examination that is not consistent with the normal expected behavior for EMS professionals.
- The State EMS Official or approved agent determines the need for and possibility of administering a same-day retest and all associated logistics in conjunction with the Examination Coordinator.
- The State EMS Official or approved agent may add and enter the total points on forms that were not tallied by the Skill Examiner as long as points for all steps have been recorded by the Skill Examiner. The State EMS Official or approved agent must determine, based upon the "Critical Criteria" and minimum point totals, if a candidate has passed or failed each skill.
- The State EMS Official or approved agent must contact the Skill Examiner for explanation, clarification, and correction when the examiner has left any areas of the form blank, if comments written by the Skill Examiner do not support the points awarded or deducted, or any other areas of confusion or contradiction exist. If it is determined that the examiner made any errors in scoring, the Skill Examiner must make any necessary corrections to the evaluation form and initial any changes he/she makes. This contact must be in compliance with the Maine CDC and Office of the Governor requirements in effect at the time of the conduct of the exam.
- If at any point the State EMS Official or approved agent is uncomfortable with the objectivity of any Skill Examiner, the State EMS Official or approved agent must again observe the Skill Examiner until you are satisfied that the skill is being conducted within NREMT guidelines.

- The State EMS Official or approved agent must transcribe all results onto the EMT Psychomotor Examination Report Form based upon availability of private space to score psychomotor results, the flow of the examination, and the possibility of administering a same-day retest.
- The State EMS Official or approved agent is not permitted to change a score. The only permissible action by anyone in relationship to final scores is nullification following the procedure outlined in the Quality Assurance Committee Procedure.
- If candidates are being informed of their unofficial psychomotor examination results at the site, the State EMS Official or approved agent must privately inform each candidate individually of his/her psychomotor examination results. This activity must be in compliance with the Maine CDC and Office of the Governor requirements in effect at the time of the conduct of the exam. The State EMS Official or approved agent may only show the candidate the completed EMT Psychomotor Examination Report Form and must in no way inform the candidate of any specific reason(s) for failure.
- After scoring all results, the State EMS Official or approved agent may advise the Examination Coordinator of general trends in psychomotor performance to help guide remedial training.

EMT Psychomotor Examination Skills

The NREMT psychomotor examination consists of skills presented in a scenario-type format to approximate the abilities of the EMT to function in the out-of-hospital setting. All skills have been developed in accordance with the 2009 EMS Education Standards and current American Heart Association Guidelines for Basic Life Support for Healthcare Providers. These materials are revised periodically to help assure that the most up-to-date guidelines are met. The psychomotor examination has been designed to serve as a formal verification of the candidate's "hands-on" abilities and knowledge to help assure public protection, rather than a teaching, coaching, or remedial training session. Therefore, specific errors in any performance should not be discussed with any candidate unlike that which should occur in the educational process during the learning phase.

The candidate is cautioned that all forms were designed to evaluate terminal performance expectations of an entry level provider upon successful completion of the state-approved Emergency Medical Technician program and were not designed as "teaching" forms. To fully understand the whys, hows and sequencing of all steps in each skill, a solid cognitive and psychomotor foundation should be established throughout the educational process. After a minimal level of competence begins to develop, the candidate should refer to the appropriate skill evaluation form for self-assessment in identifying areas of strength and weakness. If indicated, remedial training and practice over the entire skill with the educational institution is strongly encouraged. Once skill mastery has been achieved in this fashion, the candidate should be prepared for graduation from the program and completion of the psychomotor examination.

Emergency Medical Technician candidates for National Registration should demonstrate an acceptable level of competency in the following seven skills:

1. Patient Assessment/Management – Trauma – Mandatory Maine Station

All candidates will be required to perform a "hands-on," head-to-toe, physical assessment and voice treatment of a moulaged simulated patient or high fidelity simulation manikin for a given scenario. During COVID-19 only a moulaged low-fidelity manikin can be used. This skill includes:

- a. Scene Size-up
- b. Primary Survey/Resuscitation
- c. History Taking/Secondary Assessment
- d. Reassessment

2. Patient Assessment/Management – Medical – Mandatory Maine Station

All candidates will be required to perform a "hands-on," head-to-toe, physical assessment and voice treatment of a moulaged simulated patient or high fidelity simulation manikin for a given scenario.

During COVID-19 only a moulaged low-fidelity manikin can be used. This skill includes:

- a. Scene Size-up
- b. Primary Survey/Resuscitation
- c. Secondary Assessment
- d. Reassessment

3. Bag-Valve-Mask Ventilation of an Apneic Adult Patient – Maine Random Station “A”

All candidates will be required to provide ventilatory assistance to an apneic patient who has a weak carotid pulse and no other associated injuries. They are required to manually open an airway, suction the mouth and oropharynx, insert an oropharyngeal airway, and ventilate a manikin with a bag-valve-mask device.

4. Oxygen Administration by Non-rebreather Mask - Maine Random Station “A”

All candidates will be required to assemble a regulator to a portable oxygen tank and administer oxygen by non-rebreather mask to an adult patient who is short of breath.

5. Cardiac Arrest Management/AED - Maine Random Station “A”

All candidates will be required to integrate CPR skills, perform 2 minutes of hands only adult CPR, attach and use the AED (including shock delivery) given a scenario of an adult patient found in cardiac arrest where no bystanders are present. During COVID-19 the candidate will not use mouth to mask and will provide compression only CPR.

6. Spinal Immobilization (Supine Patient) - Maine Random Station “B” – During COVID-19 there is no safe way for the candidate to demonstrate this skill and therefore this station will not be part of the exam process and will be removed from the Random “B” skills selection.

All candidates will be required to immobilize an adult patient who is found supine with a suspected unstable spine using a long spine immobilization device. An EMT Assistant will be provided and the NREMT candidate is also responsible for the direction and subsequent actions of the EMT Assistant.

7. Other Random EMT Skills

In addition to the skills described above, all candidates will be evaluated over the following EMT skills chosen at random as part of the Random “A” or Random “B” skill stations. An EMT

Assistant will be provided and the NREMT candidate is also responsible for the direction and subsequent actions of the EMT Assistant:

- a. Spinal Immobilization (Seated Patient) - Maine Random Station “B” During COVID-19 there is no safe way for the candidate to demonstrate this skill and therefore this station will not be part of the exam process and will be removed from the Random “B” skills selection.
- b. Bleeding Control/Shock Management - Maine Random Station “A”
- c. Long Bone Immobilization - Maine Random Station “B”
- d. Joint Immobilization - Maine Random Station “B”

EMT Psychomotor Examination Results

Maine/NREMT candidates are required to complete four (4) as described above when taking a full attempt of the psychomotor examination. NREMT candidates are eligible for up to **two (2) full attempts** of the psychomotor examination, provided all other “Entry Requirements” of the NREMT are met. New graduates from an EMT course seeking initial NREMT certification have no more than two (2) years from their date of course completion to successfully complete all components of the NREMT certification process (cognitive and psychomotor examinations). Grading of the psychomotor examination is on a Pass/Retest/Fail basis:

1. Passed NREMT examination results are valid for up to twenty four months from the date of the examination, provided all other “Entry Requirements” of the NREMT are met.
2. NREMT candidates are eligible to retest two (2) or less skills when taking a full attempt.
3. NREMT candidates are eligible for up to two (2) retest attempts of the two (2) or less skills failed for no more than twenty four months from the date of the examination, provided all other “Entry Requirements” of the NREMT are met.
4. If offered, only one (1) retest attempt may be completed on the same day. Retests must be completed in an all-or-none fashion. The candidate must retest the specific skill(s) failed. The NREMT cannot score or report incomplete psychomotor examination attempts. Candidates are not permitted to complete only a portion of the skills that need retested. The NREMT does not mandate or guarantee same-day retest opportunities at any NREMT psychomotor examination site.
5. Failure of any skill on the second retest attempt constitutes complete failure of the entire psychomotor examination.
6. NREMT candidates who fail three (3) or more skills have failed the entire psychomotor examination.
7. NREMT candidates who fail the entire psychomotor examination must submit official documentation of remedial education to the State EMS Office before attempting the entire psychomotor examination (all four (4) skills) on their next full attempt of the psychomotor examination, provided all other “Entry Requirements” of the NREMT are met. This official documentation must be signed by the EMT Training Program Director or Training Officer that verifies remedial training over all skills has occurred since the last unsuccessful attempt and the candidate has demonstrated competence in all skills. Should a candidate fail the ***second*** full and final attempt of the psychomotor examination, the candidate must complete a new, state-approved EMT Training Program.

Please note that the NREMT and/or the State EMS Office reserve the right to nullify and invalidate scores from any NREMT psychomotor examination that does not meet acceptable criteria for validation of equivalent psychomotor competencies outlined herein.

The following chart was designed to assist in tracking the NREMT candidate through the psychomotor examination process:

NREMT PSYCHOMOTOR TESTING ATTEMPTS (Attempt period has been changed to be within 24 months of course completion. This entire table need to be adjusted based on NREMT guidance that was sent out in November 2018.)

First Full Attempt (Practical Skill Evaluation [PSE] Take #1A): Test four (4) skills		
Pass: Pass all four (4) skills Passed practical results remain valid for NREMT certification from test date for up to twelve months or thirty-six (36) months from course completion for a Maine license, provided all other NREMT/Maine EMS requirements are met.		
←		

Second Full Attempt (Practical Skill Evaluation [PSE] Take #2A): Test four (4) skills		
Pass: Pass all four (4) skills: Passed practical results remain valid for NREMT certification from test date for up to twelve months or thirty-six (36) months from course completion for a Maine license, provided all other NREMT/Maine EMS requirements are met.		
←		

For a third (3) or more consecutive skills or a second test attempt on take #2A, candidate must complete a new Maine-EMS-approved Emergency Medical Technician Course

Psychomotor Examination Accommodations

All candidates must complete the psychomotor examination in the same standardized format. The presentation of any skill may not be altered to accommodate a candidate's request without first obtaining approval from the State EMS Office. The State EMS Official or approved agent is not authorized to individually make any determination for accommodation of the psychomotor examination. For example, it is not appropriate to move the Simulated Patient in the Patient Assessment/Management – Trauma skill from the floor to an examination table at the candidate's request because the candidate is physically unable to bend down and assess a patient found lying on the floor. The psychomotor examination is intended to present simulated patients with realistic situations that approximate the candidate's ability to function in the out-of-hospital environment. The State EMS Official or approved agent and all Skill Examiners must remain vigilant for any situation that may alter the normal presentation of any skill other than that which is intended throughout the psychomotor examination. When in doubt, contact the State EMS Office for assistance.

Skill Examiner Orientation to the Psychomotor Examination

Good [morning, afternoon, evening]. My name is [State EMS Official or approved agent's name]. I will be responsible for administration of this examination. On behalf of the National Registry of Emergency Medical Technicians and the State EMS Office, I would like to thank you for serving as a Skill Examiner today. All data relative to a candidate's performance is based upon your **objective** recordings and observations. You were chosen as an examiner today because of your expertise in the assigned skill and ability to fairly and accurately observe and document various performances. All performances must be reported with the greatest degree of objectivity possible. The forms you are using today have been designed to assist you in objectively evaluating the candidates.

Let me emphasize that this examination is a formal verification procedure not designed for teaching, coaching, or remedial training. Therefore, you are not permitted to give any indication whatsoever of satisfactory or unsatisfactory performance to any candidate at any time. You must not discuss any specific performance with anyone other than me. If you are unsure of scoring a particular performance, notify me as soon as possible. Do not sign or complete any evaluation form in which you have a question until we have discussed the performance. If I'm busy with other duties, make notes of the performance, notify the examination coordinator to get my attention, and continue on with your evaluation of other candidates if possible.

Please act in a professional manner at all times, paying particular attention to the manner in which you address candidates. The NREMT does not discriminate or harass and it will not tolerate any type of discrimination or harassment by anyone involved with administration of the psychomotor examination. You must be consistent, fair, and respectful in carrying out your duties as a formal examiner. The safest approach is to limit your dialogue to examination-related material only. Be careful of the manner in which you address candidates as many will interpret your remarks as some indication of his/her performance. You should develop a dialogue with candidates throughout his/her performance and should ask questions for clarification purposes. These questions may not be leading but should be asked when additional clarification is required. Do not ask for information that does not relate to the evaluation criteria in your skill. For example, if a candidate states, "I'd now apply high flow oxygen," your appropriate response might be, "Please explain how you would do that." Do not ask for additional information beyond the scope of the skill, such as having the candidate explain the percentage of oxygen delivered by the device, contraindications to the use of the device, or other knowledge-type information.

You may also have to stimulate a candidate to perform some action. If a candidate states, "I'd do a quick assessment of the legs," you must interject and ask the candidate to actually perform the assessment as he/she would in a field situation.

We suggest you introduce yourself to each candidate as you call him/her into your room. No candidate, at any time, is permitted to remain in the testing area while waiting for his/her next skill. As the candidate enters, be sure he/she did not bring any books, pamphlets, brochures, study materials, calipers, calculators, or any other electronic or mechanical devices. Take a few moments and clearly print the candidate's first and last name on the evaluation form as well as your name, the date, and scenario or set number if required. We suggest you use ink pens and follow good documentation practices when completing these forms. You should then read aloud the appropriate set of "Instructions to the Psychomotor Skills Candidate" exactly as printed at the end of your essays. Be sure to alternate the scenarios between candidates if required in your skill. You may not add to or detract from these instructions but may repeat any portion as requested. The instructions must be read to each candidate in the same manner to ensure consistency and fairness. Give the candidate time to inspect the equipment if necessary and explain any specific design features of the equipment if you are asked. If the candidate enters with any equipment, be sure I have inspected it and you are familiar with its appropriate use prior to evaluating the candidate.

When the candidate begins his/her performance, please document the actual time started (not elapsed times) on the appropriate space of the evaluation form. As the candidate progresses through the skill, fill out the evaluation form in the following manner:

1. Place the point or points in the appropriate space at the time each item is completed.
2. Only whole points may be awarded for those steps performed in an acceptable manner. **You are not permitted to award fractions of a point.**
3. Place a zero in the "Points Awarded" column for any step that was not completed or was performed in an unacceptable fashion (inappropriate, haphazard, or non-sequential resulting in excessive and potentially detrimental delay).

All forms should be filled-out in a manner that prohibits the candidate from directly observing the points you award or comments you may note. Do not become distracted by searching for specific statements on the evaluation form when you should be observing the candidate's performance. Ideally you should be familiar with these forms, but if this occurs, simply turn the form over and concisely record the entire performance on the backside. After the candidate finishes the performance, complete the front side of the evaluation form in accordance with the documented performance. Some skill evaluation instruments are printed with areas provided for performances to be documented. Please remember the most accurate method of fairly evaluating any candidate is one in which your attention is devoted entirely to the performance of the candidate.

Please observe and enforce all time limits for the skills. When the time limit has been reached, simply stop the candidate's performance promptly, document the actual time the performance ended, and direct the candidate to move on to the next skill, making sure that no candidate takes any notes or recordings of the skill (notes on vital signs, scenario information, etc.). If the candidate is in the middle of a step when the time limit is reached, permit him/her to complete only that step but not start another. You should then place a zero in the "Points Awarded" column for any steps that were not completed within the allotted time.

After all points have been awarded, you must total them and enter the total in the appropriate space on the form. Next, review all "Critical Criteria" statements printed on the evaluation form and check all that apply to the performance you just observed. **For each of the "Critical Criteria" statements you check, please document your rationale on the reverse side of the evaluation form.** Do not be vague or contradictory and do not simply rewrite the statement that you have checked. Factually document the candidate's actions that caused you to check the respective statements. You may also wish to document each step of the skill in which zero points were awarded in the same fashion. Be sure to sign the form in the appropriate space and prepare the equipment and supplies to appear in the same fashion before accepting another candidate into your skill. Are there any questions at this time?

At this time, all pagers, cellular telephones, personal digital assistants, and similar electronic communication devices must be turned to the silent or vibrate mode for the duration of the examination. You may use these devices as time keeping equipment. **Please do not answer calls or read and send text messages or emails while testing any candidate, except those to or from the State PSE Administrator . You are not permitted to take any photographs, videos or other digital copies of any portion of this examination, except in situations when a photograph is used to convey station or candidate-performance information to the PSE Administrator**

You are responsible for the security of all evaluation materials throughout the examination and must return all materials to me before you leave this site. If you need to take a break, inform the Examination Coordinator or me and secure all evaluation instruments that were issued to you. After you receive your materials, proceed to your skill and check the props, equipment, and moulage to ensure all equipment is available and functioning properly. Please take a moment to look around the room and remove any materials that may assist a candidate with the examination process (charts, posters, algorithms, training materials, etc.). You **must** read through the essay and instructions, and review the evaluation form prior to evaluating any candidate. Please wait until I have inspected your room and answered any of your specific questions before opening your skill. I will also be visiting all skills during the examination and will try to avoid interference as much as possible.

Are there any questions before we dismiss?

The State EMS Official or approved agent distributes all psychomotor examination materials and dismisses all Skill Examiners and Simulated Patients to the skills.

Candidate Orientation to the Psychomotor Examination

[Redacted]

Good [morning, afternoon, evening]. My name is [State EMS Official or approved agent's name]. I will be responsible for administration of this examination. The Examination Coordinator for this test is [Exam Coordinator's name]. On behalf of the National Registry of Emergency Medical Technicians, the State EMS Office, and [Name of Sponsoring Institution], I would like to welcome you here today. I would like to thank [Exam Coordinator] for arranging and securing the facilities and personnel assisting with today's examination. We extend our sincere wishes for your successful completion of this part of the certification process and obtaining subsequent National EMS Certification as an EMT.

I will now read the roster to confirm attendance before we begin the orientation. Please identify yourself when I call your name so that I may record your attendance on the official roster.

[Redacted]

State EMS Official or approved agent now calls the roll and marks the roster for attendance (✓ if present, "N/S" if no-show).

[Redacted]

Continue reading to all candidates:

If I did not call your name, please identify yourself so that I can record your attendance today. I suggest that everyone check with me before leaving this site to compare the skills you think you need to complete with the official roster. It is your responsibility to complete all required skills. The NREMT and the State EMS Office are not responsible for your incomplete attempt of the psychomotor examination.

[Redacted]

The State EMS Official or approved agent must read the following instructions to all candidates for the psychomotor examination:

The instructions I am about to give pertain to the psychomotor examination. Please pay close attention as these instructions will not be repeated at a latertime.

The Skill Examiners utilized today were selected because of their expertise in the assigned skill. The Skill Examiner is an observer and recorder of your actions. Each Skill Examiner documents your performance in relationship to criteria established by the NREMT that adheres to the National EMS Education Standards, AHA Guidelines and the

National Trauma Triage Protocol published by the U.S. Department of Health and Human Services Centers for Disease Control and Prevention.

You will be routed from the staging area when a skill is prepared for testing. No candidate, at any time, is permitted to remain in the testing area while waiting for his/her next skill. When you get to the room, please knock on the door to let the Skill Examiner know that you are waiting to test. You are not permitted to take any books, pamphlets, brochures, study materials, calculators, or any other electronic or mechanical devices. Any notes you take must be left in the room when you complete the skill. At this time, all pagers, cellular telephones, personal digital assistants, and similar electronic communication devices must be turned off and locked in your vehicle or other secure area for the duration of the examination. If you attempt to use any communication device during the examination for any reason whatsoever, you will be immediately dismissed from the remainder of the examination.

As you enter the room, the Skill Examiner will greet you and ask for your first and last name. Please provide the proper spelling of your name so that your results may be reported accurately. The Skill Examiner will then read aloud the "Instructions to the Psychomotor Skills Candidate" exactly as printed on the instructions provided by the NREMT and the State EMS Office. This information is read to each of you in the same manner to ensure consistency and fairness. Please pay close attention to the instructions as they correspond to similar information you might receive on an EMS call and give you valuable information on what will be expected of you during your performance. The Skill Examiner will ask if you understand the instructions and will be happy to repeat any portion if necessary. Please do not ask the Skill Examiner to supply additional information not contained in the instructions as this is not permitted.

The skills are supplied with several types of equipment for your selection. You will be given time at the beginning of each skill to survey and select the equipment necessary for the appropriate management of the patient. Do not feel obligated to use all of the equipment. The Skill Examiners will offer to point out any specific operational features of the equipment if you are unfamiliar with any device. If you brought any of your own equipment, I must inspect and approve it for use before you enter the skill.

As you progress through the psychomotor examination, each Skill Examiner will be observing and documenting your performance. Do not let their documentation practices influence your performance. There is no correlation between the volume of their documentation and the quality of your performance. We encourage you to explain the things you are doing within the scope of the time limit. The Skill Examiner may also ask questions for clarification purposes. Simply answer any questions and do not assume they are meant to provide feedback on the quality of your performance. If the skill has an overall time limit, the examiner will inform you of this during the instructions. When you reach the time limit, the Skill Examiner will direct you to stop your performance.

However, if you complete the skill before your allotted time, inform the Skill Examiner that you have finished your performance. As you leave, please remember that you are not permitted to make any copies or recordings of this examination at any time.

Candidates sometimes complain that Skill Examiners are abrupt, cold, or appear unfriendly. No one is here to add to the stress and anxiety you already feel. It is important for you to understand that the Skill Examiners have been instructed to avoid any casual conversation with you. This is necessary to help ensure fair and equal treatment of all candidates throughout the exam. Please recognize this behavior as professional and simply perform the skills to the best of your ability. We have instructed the Skill Examiners not to indicate to you in any way your performance in any skill. Please do not interpret any remarks as an indication of your overall performance.

You are not permitted to discuss any specific details of any skill with each other at any time. Please be courteous to the candidates who are testing by keeping all excess noise to a minimum. Be prompt in reporting to each skill so that we may complete this examination within a reasonable time period.

Your official psychomotor results will be reported as pass/fail of each skill by [State EMS Official or approved agent explains how results will be reported]. Your official results will also be electronically communicated to you by the NREMT, provided you have created an Emergency Medical Technician account. An account can be created by logging into their website at www.nremt.org and following the instructions. If you make any errors in your performance, the State EMS Official or approved agent will not explain any specific errors in any performance. The purpose of certification by the NREMT is to verify achievement of minimal competencies for safe and effective practice. Providing a specific analysis of errors in your performance was the responsibility of your educational program during the learning process and not the certification process. If you are unsuccessful in any skill today, we recommend that you contact your educational institution for remedial training before attempting to retest. Please remember today's examination is a formal verification process and was not designed to assist with teaching or learning. The Skill Examiners have not played any role in the establishment of pass/fail criteria, but merely observe and document your performance in each skill.

If you feel you have a complaint concerning the psychomotor examination, a formal complaint procedure does exist. You must initiate any complaint with me today. Complaints will not be valid after today and will not be accepted if they are issued after you learn of your results or leave this site. You may file a complaint for only two (2) reasons:

1. You feel you have been discriminated against. Any situation that can be documented in which you feel an unfair evaluation of your abilities occurred might be considered discriminatory.
2. There was an equipment problem or malfunction during your performance in any skill.

If you feel either of these two things occurred, you must contact me immediately to initiate the complaint process. I will supply the necessary complaint form that you must complete in writing. The Quality Assurance Committee, comprised of the Physician Medical Director, the Examination Coordinator, and the State EMS Official or approved agent will review your concerns and make a final determination of your complaint.

I am here today to ensure that fair, objective, and impartial evaluations occur in accordance with NREMT and state-approved policy. If you have any concerns, please notify me immediately to discuss your concerns. I will be visiting all skills throughout the examination to verify adherence to these guidelines. Please remember that if you do not voice your concerns or complaints today before you leave this site or before I inform you of your results, your complaints will not be accepted.

Does anyone have any questions concerning the psychomotor examination at this time?

Please print the following information legibly on the EMT Psychomotor Examination Report Form:

- Identification number (State Certification #, Examination Routing #, etc.)
- Examination Date (Month, Day, Year)
- Name
- Address
- Examination site (Name of Facility, City, State)
- Are you only retesting two (2) or less skills today? Please bubble-in your response as either “No” or “Yes”

Notice the skills listed in the chart. If you are taking the entire psychomotor examination today, you will be required to complete the medical and trauma stations along with two random stations that include two of the other skills listed on the chart. If you are retesting two (2) or less skills today, be sure to check with me before starting your psychomotor examination.

Remember that your retest must be within 24 months of your initial course completion date to be accepted by NREMT. Whatever the case, it is **your** responsibility to complete all appropriate skills.

If you are taking the entire psychomotor examination today, you can fail up to two (2) skills and be eligible to retest just the skills failed. Failing more than two (2) skills will require remedial training and repeating the entire psychomotor examination on another date. *Remember that examination results are only valid for twenty four (24) months from the date of your course completion.* If you are eligible for retesting, you have two (2) retest attempts to pass the failed skill(s) within that twelve (12) month period. Note that you only need to retest the specific skill(s) failed. For example, if you are here for your first attempt of the psychomotor examination and fail Patient Assessment/ Management – Medical, and Bag- Valve-Mask Ventilation of an Apneic Adult Patient, you only need to retest these two (2) skills. If we conduct a same-day retest today, you must retest all skills that need retested or none at all. We cannot score or report incomplete psychomotor examination attempts. The NREMT and the State EMS Office do not mandate or guarantee same-day retest opportunities at any EMT Psychomotor Examination site. Please note that all results are preliminary and unofficial until they have been formally processed and reported to you by [State EMS Official or approved agent reminds candidates who the responsible agency is that will be reporting official psychomotor examination results].

Lastly, be sure to read the “Candidates Statement” on the back side of the form carefully before signing your legal signature and filling-in today’s date. Please note that unprofessional behavior, such as the use of foul language, making threats, or other types of irregular behavior will not be tolerated and could lead to immediate dismissal and other appropriate actions.

Please come up to turn-in your completed EMT Psychomotor Examination Report Form. I will need to see some form of identification, such as your driver’s license, as you turn-in these forms. This would also be a good time to confirm the skills you "think" you need to complete with me before we begin the examination. Please remember to turn off all of your electronic communication devices and lock them in your vehicle or other secure area before we start this examination.

NOTE: The State EMS Official or approved agent should collect all EMT Psychomotor Examination Report Forms at this time and verify the candidate's identity with an official form of photo identification (government-issued identification such as a driver's license). If an imposter is discovered, document the occurrence as outlined under the "False Identification" section on p. 43. Photocopies of any ID are ***not*** official and should ***not*** be accepted. If a candidate has no acceptable form of ID and the Examination Coordinator or any other person in an official capacity at the examination site cannot verify his/her true identity, the State EMS Official or approved agent should immediately dismiss the candidate from the psychomotor examination.

Quality Assurance Committee Procedure

The Quality Assurance Committee is responsible for the following:

1. Review and rendering of official and final decisions for all candidate complaints
2. Review and rendering of official and final decisions in cases where a specific performance, treatment protocol, or other situations arise in which the State EMS Official or approved agent needs assistance to objectively make a final determination

The Quality Assurance Committee will consist of only the Physician Medical Director, Examination Coordinator, and the State EMS Official or approved agent. When the State EMS Official or approved agent is also acting as the Examination Coordinator, a third uninvolved, unbiased person must be appointed to the Quality Assurance Committee. Likewise, an uninvolved, unbiased person should replace any involved and potentially biased party before the Quality Assurance Committee can begin deliberations. The State EMS Official or approved agent serves as the Chairperson of the Quality Assurance Committee. No Quality Assurance Committee meetings can be held without all members assembled. The Physician Medical Director may participate by phone (speaker) if unable to attend in person.

After the State EMS Official or approved agent receives a complaint that may be valid, he/she should provide the candidate with the EMT Psychomotor Examination Complaint Form. The candidate will then be permitted adequate time to complete the form for submission to the Committee. The State EMS Official or approved agent should only permit the candidate to file a complaint based upon discrimination or equipment malfunction. The State EMS Official or approved agent should under no circumstances inform the candidate or anyone else of the candidate's pass/fail status. Please inform the candidate to remain at the examination site should any further questions develop and to await the decision of the Committee.

The State EMS Official or approved agent should investigate the candidate's concerns and may individually rule on nullifying results without deliberation of the Quality Assurance Committee only if the complaint centers around equipment malfunction.

The guidelines for the Quality Assurance Committee include:

1. The State EMS Official or approved agent should inform the Examination Coordinator when a formal complaint has been initiated.
2. The State EMS Official or approved agent should notify the involved Skill Examiner that a complaint has been filed and he/she should remain on-site to be interviewed by the Quality Assurance Committee if necessary.
3. The Examination Coordinator should secure a room for the Committee's deliberations.
4. The Committee will meet at a convenient time so as to not delay the remainder of the examination.
5. The State EMS Official or approved agent should acquire the skill evaluation form(s) from the skill(s) in question. Only skills that have been addressed by the candidate in the written complaint should be reviewed.

6. The State EMS Official or approved agent should read the complaint aloud exactly as written. The Committee should then come to consensus as to the validity of the complaint. The Committee should determine the necessity to interview the Skill Examiner and/or the candidate. If interviews of both parties are required, they should be conducted separately.
7. Each member of the Committee has one vote. A majority vote rules as the official decision of the Quality Assurance Committee. After all facts have been gathered and disclosed, the Quality Assurance Committee should vote to determine one of the following outcomes:
 - a. Nullify the results of the skill(s) in question regardless of the score and repeat the skill(s).
 - b. Complaint is not valid after consideration of the facts and all results in question stand as reported.
8. **THE RESULTS OF ANY SKILL, EITHER PASS OR FAIL, CANNOT BE CHANGED BY THE STATE EMS OFFICIAL OR APPROVED AGENT, QUALITY ASSURANCE COMMITTEE, OR ANY OTHER INDIVIDUAL. THE ONLY ACTION PERMISSIBLE BY ANYONE IN RELATIONSHIP TO FINAL SCORES IS OUTLINED IN "7a" AND "7b" ABOVE.**
9. Any candidate whose results have been nullified should be examined again by a different Skill Examiner.
10. The Quality Assurance Committee should complete the Quality Assurance Committee Report for submission to the State EMS Office.
11. The State EMS Official or approved agent should then meet with the candidate and inform the candidate of the Quality Assurance Committee's official decision. The candidate should be informed that this decision is final and cannot be reversed by the State EMS Office or the NREMT. Obtain the candidate's signature on the form that acknowledges these actions were completed at the examination site.
12. The State EMS Official or approved agent should submit the EMT Psychomotor Examination Complaint Form and the Quality Assurance Committee Report to the State EMS Office along with all other examination materials.

Pages 39 – 40 are the NREMT Psychomotor Examination Complaint Form.

NATIONAL REGISTRY OF EMERGENCY MEDICAL TECHNICIANS
EMERGENCY MEDICAL TECHNICIAN PSYCHOMOTOR EXAMINATION
QUALITY ASSURANCE COMMITTEE
REPORT FORM

Candidate: _____ Exam Site: _____

Date: _____ Skill: _____

Examiner: _____ Examiner Phone #: _____

After reviewing the facts as presented, the Quality Assurance Committee's official decision is as follows:

___ Nullify the results of the skill(s) in question regardless of the score and repeat the skill(s).

___ Complaint is not valid after consideration of the facts and all results in question stand as reported.

We the undersigned have reviewed the candidate's complaint based upon all facts presented. The candidate was informed of the Quality Assurance Committee's decision by the In-charge person. _____

Signature or name of Physician Medical Director

Signature of Examination Coordinator

Signature of State EMS Official or approved agent

As the complainant, I have been informed of the Quality Assurance Committee's official and final decision.

Signature of Candidate

Date

This form should be submitted to the State EMS Office with all examination materials.

In cases where a specific performance, treatment protocol, or other situations arise in which the State EMS Official or approved agent needs assistance to objectively make a final determination, he/she may convene a meeting of the Quality Assurance Committee. The Committee should meet and discuss all matters related to the specific situation in question. Each member then has one vote with the majority vote ruling as the official decision of the Quality Assurance Committee. The State EMS Official or approved agent should complete the Quality Assurance Committee Review Form and submit it along with all other examination materials to the State EMS Office.

Page 42 is the NREMT Psychomotor Examination Quality Assurance Committee Review Form.

**NATIONAL REGISTRY OF EMERGENCY MEDICAL TECHNICIANS
EMERGENCY MEDICAL TECHNICIAN PSYCHOMOTOR EXAMINATION**

QUALITY ASSURANCE COMMITTEE

REVIEW FORM

We, the Quality Assurance Committee, met to review the following situation and all related facts as documented below:

Nature of Situation:

Summary of Facts (use back side of form if necessary):

After reviewing the facts as presented, the Quality Assurance Committee's official decision is as follows:

Signature or name of Physician Medical Director

Signature of Examination Coordinator

Signature of State EMS Official or approved agent

Exam Site: _____ Date: _____

This form should be submitted to the State EMS Office with all examination materials.

False Identification

Following collection of the EMT Psychomotor Examination Report Form after orienting all candidates to the psychomotor examination, if it is ascertained that a candidate's identification does not match the official examination roster or information that the candidate has completed on the form, the State EMS Official or approved agent must immediately attempt to identify the impersonator. All examination materials handed-in by the impersonator must be clearly marked to fully indicate that the candidate identified on the EMT Psychomotor Examination Report Form did not actually complete the psychomotor examination. The State EMS Official or approved agent must also dismiss the impersonator from the examination site. A report must be filed to document the irregularity and to identify all individuals involved, including the candidate scheduled to take the examination as well as the true identity of the impersonator if it can be determined.

Photocopies of any ID are not official and will not be accepted. If a candidate has no acceptable form of ID and the Examination Coordinator, Physician Medical Director, or any other person in an official capacity at the examination site cannot verify his/her true identity, the State EMS Official or approved agent must immediately dismiss the candidate from the psychomotor examination.

Late Arrivals

Situations such as inclement weather conditions or ambulance runs are typical examples in which the candidate may be granted permission to begin the psychomotor examination late. If admitted into the examination, candidates arriving late must be afforded the opportunity to complete all of the psychomotor examination he/she needs. **No candidate may be permitted to complete only a portion of the psychomotor examination he/she needs.** If you can ensure the candidate will be able to complete all portions of the psychomotor examination he/she needs, you must orient the candidate to the psychomotor examination in the usual manner before permitting him/her to start the examination. If the facility cannot ensure that the candidate will be able to complete all portions of the psychomotor he/she needs, the candidate must be dismissed from the psychomotor examination and instructed to make alternate arrangements to complete the psychomotor examination at a later date.

Interruption of the Psychomotor Examination

Once the examination has started, if a candidate withdraws from the examination for any reason prior to completion, collect the candidate's skill evaluation materials in the usual manner and report any results completed up until that point. You should write a note of explanation on the candidate's report form in the section for "Comments" below your signature.

Despite the Examination Coordinator's best planning, an interruption outside of anyone's control may disturb a candidate who is taking the psychomotor examination. An excessive interruption in a room where a candidate is attempting to complete a skill is an example of an interruption that could affect the candidate's concentration. In this circumstance, the State EMS Official or approved agent should use his/her best judgment and nullify the result if necessary if you believe the interruption adversely impacted the candidate's performance.

Perhaps the most severe form of interruption during the psychomotor examination can occur when the fire alarm sounds for a fire drill or the electricity goes off in the building. Should this occur, the State EMS

Official or approved agent, Skill Examiners, and Examination Coordinator must secure all examination materials until you are able to re-enter the building or power is restored. If necessary, you should nullify results for candidates testing in skills when the interruption occurred and permit him/her to restart and complete that skill on his/her initial attempt after order is restored in the examination site. These are general guidelines for dealing with the rare interruptions of psychomotor examinations. Should you ever be confronted with such a situation, use your best judgment in consultation with the Exam Coordinator. Your decisions should be based on ensuring that all candidates were able to complete the psychomotor examination in the same standardized format as all other candidates. Do not make any decision that could potentially jeopardize the health and safety of anyone involved with the examination!

Use of Prohibited Materials

Candidates are not permitted to use notes of any type that were brought into the examination and they are not permitted to take any study materials into any skill when testing. Candidates must not copy any material from the examination or make recordings of the examination at any time or in any way. The use of calculators, pagers, cellular telephones, personal digital assistants, or any other mechanical or electronic communication device is strictly prohibited throughout the psychomotor examination.

If a candidate is discovered attempting to engage or engaging in any kind of inappropriate behavior during the psychomotor examination, such as giving or receiving help; using prohibited notes, books, papers, or a mechanical device of any kind; using recording, photographic, or any other electronic communication device; removing or attempting to remove examination materials or notes from any room; or taking part in any act of impersonation, the candidate may be dismissed from the examination process by the State EMS Official or approved agent.

If you suspect any candidate of committing any of the above actions, the State EMS Official or approved agent must prepare a written report, paying particular attention to the following criteria:

- Identify each suspected candidate by name, identification number, and level of examination.
- Identify any other candidate(s) who are also suspected of being involved. Place his/her name(s), identification number(s), and level of examination(s) in the report. Please explain the degree to which the additional candidate(s) was/were cooperating in the misconduct.
- Identify the names, addresses, and phone numbers of all Skill Examiners, Simulated Patients, Examination Coordinator, and any other person who also observed the incident.
- All completed reports must be submitted to the State EMS Official or approved agent before leaving the site.
- Each person submitting the report must sign the report.

If a candidate's behavior during the psychomotor examination disturbs or prevents others from doing his/her best work, warn the candidate that he/she will be dismissed if the behavior persists.

Even though all NREMT psychomotor examination materials are copyrighted, some candidates may attempt to use or share “fraternity notes” or other illegal information with each other in preparation for the psychomotor examination. If you suspect any candidate of such activity, immediately notify the State EMS

Office. You may be directed to form a Quality Assurance Committee to:

1. Immediately suspend administration of the psychomotor examination to all candidates at that site.
2. Interview any candidate suspected of this inappropriate behavior. If more than one (1) candidate is suspected, the interviews must be conducted separately.
3. Attempt to obtain all copies of such notes or recordings for inspection.
4. Enlist the assistance of law enforcement personnel to assist with retrieval of the copyrighted property of the NREMT.

After all materials have been retrieved, all interviews completed, and the State EMS Official or approved agent is reasonably satisfied that all candidates involved have been dismissed, administration of the psychomotor examination may resume at the discretion of the State EMS Office.

Candidates Suspected of Dishonest Action

A written report must be submitted in all suspected cases of dishonesty in the psychomotor examination by the State EMS Official or approved agent in addition to any proctor(s), the Examination Coordinator, and all other personnel who witnessed the occurrence. The report must include the following:

- Name, address, and phone number of the person who witnessed the occurrence
- Purpose/function at the examination site
- A summary of all facts concerning the situation

Prior to returning completed examination materials, the State EMS Official or approved agent must clearly mark the EMT Psychomotor Examination Report Forms of all candidates involved and attach all affected forms to the incident report.

Irregular Behavior

The NREMT has disciplinary policies in place to address irregular behavior during examinations (visit <http://www.nremt.org>). The state may also have additional disciplinary policies related to irregular behavior of which the State EMS Official or approved agent must be aware. The following may be sufficient cause to bar candidates from future examinations, to terminate participation in an ongoing examination, to invalidate the results of an examination, to withhold or revoke scores or certification, or to take other appropriate action:

1. The giving or receiving of aid in the examination as evidence either by observation or by statistical analysis of answers of one or more participants in the examination.
2. The unauthorized access to, possession, reproduction, disclosure or use of any examination materials, including, but not limited to, examination questions or answers before, during or after the examination.
3. The making of threats toward NREMT and State EMS Office staff or agents.
4. The use of unprofessional (foul) language when interacting with NREMT and State EMS Office staff or agents.

5. The offering of any benefit to any agent of the NREMT, State EMS Office or the testing service and/or a testing site administrator in return for any aid or assistance in taking an examination.
6. The engaging in irregular behavior in connection with the administration of the examination.

Dismissal from the Psychomotor Examination

Because of the need to maintain order and examination security in the examination process, you have the authority to dismiss a candidate for misconduct as outlined above. However, dismissal from the examination may have serious consequences for a candidate and should be a last resort. In certain cases, you may be reluctant to recommend dismissal for fear of embarrassment, disturbance to other candidates, or physical reprisal. Prior to making a decision for dismissal, you must consult the Examination Section of the NREMT office and the State EMS Office.

You may decide to dismiss when warranted, but you should use your best judgment in handling the situation. Take no action until you are certain a candidate has given or received assistance; used prohibited aids; disturbed others who were taking the examination; made threats toward NREMT or State EMS Office staff or agents; used unprofessional (foul) language when interacting with NREMT or State EMS Office staff or agents; attempted to take or took any copyrighted NREMT examination materials; or engaged in irregular behavior in connection with the administration of the examination. When you are sure of a violation, immediately collect all of the candidate's psychomotor examination material completed up until that point and dismiss him/her/them from the examination site. Tell the candidate(s) only that failure to abide by the examination regulations has made your actions necessary. Give a full account of the incident on a report following the criteria outlined above. Return all examination materials, indicating on the EMT Psychomotor Examination Report Form that the candidate's results have been subject to misconduct as documented in your incident report.

Reporting Psychomotor Examination Results

The psychomotor examination skill evaluation forms should be totaled by the Skill Examiner. The State EMS Official or approved agent may total the points on forms that have not been added-up as long as the points for each individual step have been entered. The State EMS Official or approved agent should determine, based upon the "Critical Criteria" and minimum point totals, if a candidate has passed or failed each skill. The State EMS Official or approved agent should re-calculate the point total on all sheets where it appears as though the minimum number of points has not been gained. If the Skill Examiner has left any areas of the form blank, if comments written by the Skill Examiner do not support the points awarded or deducted, or any other areas of confusion exist, the State EMS Official or approved agent should contact the Skill Examiner for a full explanation and clarification. After discussion, if it is determined that the Skill Examiner made any error in scoring, the Skill Examiner should make any necessary adjustments to the evaluation form and initial any changes. If the objectivity of the Skill Examiner is questioned, the State EMS Official or approved agent should again observe the Skill Examiner until he/she again verifies that the skill is being conducted within NREMT guidelines.

The State EMS Official or approved agent should transcribe all results onto the EMT Psychomotor Examination Report Form (see Appendix E). This may be accomplished at the examination site or following the examination at the discretion of the State EMS Official or approved agent based upon availability of private space to score psychomotor results, the flow of the examination, and the possibility of administering

a same-day retest. All official records of the psychomotor examination should be retained by the State EMS Official or approved agent in accordance with State EMS Office recommendations (12 months).

The most efficient way to score psychomotor examination results is to lay out the EMT Psychomotor Examination Report Forms in alphabetical order on the tabletop in the secure room. As the individual skill evaluation forms are collected, the State EMS Official or approved agent distributes the sheets by placing them on top of the appropriate candidate's psychomotor report form. As soon as the results are transcribed, the individual skill evaluation form is placed underneath the EMT Psychomotor Examination Report Form. Then as more sheets are collected, the individual skill evaluation forms are placed on top of the appropriate candidate's EMT Psychomotor Examination Report Form. In this way, the only results that must be transcribed are those that are lying on top of the EMT Psychomotor Examination Report Form. This also eliminates the need to constantly shuffle through forms that have already been scored and transcribed.

Be sure the following information has been filled-in by each candidate on the EMT Psychomotor Examination Report Form:

- Identification Number (State Certification #, Examination Routing #, etc.)
- Examination Date (Month, Day, Year)
- Name
- Address
- Examination Site (Name of Facility, City, State)
- Retesting (Yes or No)
- Legal signature of the candidate and date
- Date (Month/Day/Year)

The State EMS Official or approved agent should be sure to transcribe the psychomotor results onto the EMT Psychomotor Examination Report Form. As you look at the form (refer to Appendix E), you will see three (3) sets of "Pass/Fail" columns in which to transcribe all results (Full Exam; Retest #1, Retest #2). The State EMS Official or approved agent should be careful to fill-in the results for each skill in the appropriate set of columns based upon the candidate's previous testing history. The following chart should assist in determining the proper column in which to transcribe results and the possible outcomes of the testing attempt:

Columns	Possible Outcomes
First Pair: "Results of Full Attempt"	Pass, Retest, Fail
Middle Pair: "Results of Retest #1"	Pass, Retest
Last Pair: "Results of Retest #2"	Pass, Fail

If unofficial psychomotor examination results are being reported that day, the possible outcomes for the various testing attempts are printed below each respective set of columns. The State EMS Official or approved agent should circle the appropriate outcome of the candidate's attempt before reporting the unofficial results to the candidate. **When reporting these unofficial results, the State EMS Official or approved agent should only show the candidate the completed EMT Psychomotor Examination Report Form and should in no way inform him/her of the specific reasons for failure.**

If a same-day retest is administered, use the same EMT Psychomotor Examination Report Form that the candidate filled-out during the orientation process rather than having him/her complete another form. The

State EMS Official or approved agent should then transcribe the retest results into the next set of columns immediately to the right of where the first set of results was filled-in from that day.

Same-Day Retest Considerations

The State EMS Official or approved agent, in conjunction with the Examination Coordinator, may decide to administer a psychomotor examination retest on the same day if permissible under local policies and procedures. The decision should be made as early as possible during the day of the examination. The following factors should be considered:

- Ability of the State EMS Official or approved agent to score all psychomotor results and tabulate retest needs
- Availability of qualified Skill Examiners to be reoriented to different skills. No candidate may be retested on the same day in any skill by the original Skill Examiner.
- Protection of all Skill Examiners and the Examination Coordinator. Unnecessary animosity and undue retribution should be avoided at all costs.
- Total number of candidates who need to retest on the psychomotor exam
- Consensus and ability of the Skill Examiners to stay the additional time to complete all retests
- Availability of the examination site to ensure completion of the retest and associated logistics
- Travel considerations of the State EMS Official or approved agent and Skill Examiners

Do not commit to administer a same-day retest until the final decision has been made, taking into account the factors outlined above. After the decision has been made to conduct a same-day retest, all candidates should be informed that a same-day retest will be made available. The State EMS Official or approved agent should inform all candidates that they will be entitled to only one (1) retest attempt at that test. No candidate is permitted to complete the entire EMT Psychomotor Examination again during a same-day retest attempt. The State EMS Official or approved agent should also remind all candidates that no complaint will be valid if it is issued after being informed of his/her results.

The following candidates would be eligible for a same-day retest if administered:

- EMT candidates completing a full attempt (completes all four (4) skills) who fail two (2) or less skills
- EMT candidates on Retest #1 attempt who fail any of the two (2) skills tested

The following candidates are **not eligible** for any same-day retesting:

- EMT candidates completing a full attempt (completes all four (4) skills) who fail two (2) or more skills
- EMT candidates on Retest #2 who fail any of the two (2) or less skills tested

When all complaints have been fully deliberated, the State EMS Official or approved agent should privately and individually inform each candidate of his/her results and offer each eligible candidate the option for a same-day retest if one is being administered. Before informing the candidate of his/her results, the State EMS Official or approved agent should ask one last time, “Do you have any complaints concerning equipment malfunction or discrimination?” **If not, the State EMS Official or approved agent should only show candidates the completed EMT Psychomotor Examination Report Form and should in no way inform them as to the reason(s) for failure. Retests should be completed in an all-or-none fashion.**

Candidates are only permitted to complete the entire retest, not just a portion of the retest to which they are entitled. It is the candidate's decision to complete a same-day retest. Candidates who are completing Retest #2 should be cautioned that failure of any skill on Retest #2 constitutes complete failure of the entire psychomotor examination, requiring him/her to complete the entire psychomotor examination (all four (4) skills) on the next full attempt after officially documenting remedial training in all skills. **Remember** that your retest must be within 12 months of your initial psychomotor examination (all four [4] skills) to be accepted.

Informing candidates of the psychomotor examination results on the same day may create an antagonistic response from the candidates who have failed any portion. The State EMS Official or approved agent and the Examination Coordinator should be made aware of this possibility. If neither are prepared to uphold all evaluations of the Skill Examiners and the criteria for the psychomotor examination, or if candidates become boisterous, unruly, and hostile upon being informed of their results, no same-day retest should be offered. In this situation, it is best to dismiss all remaining personnel from the examination site without giving out any more results. Suspend any retesting if underway, inform all remaining candidates to expect their results by some other method, collect and secure all examination materials, and dismiss all personnel from the examination site.

Same Day Retest Roster

Once the State EMS Official or approved agent commits to administer a same-day retest, it is possible to begin retesting before every single candidate finishes the psychomotor examination provided two (2) or more of each skill was set up and Skill Examiners don't need to be reoriented to different skills. No candidate can begin to retest until the State EMS Official or approved agent has scored every result for that candidate's attempt and determined if he/she is eligible to retest. If only one (1) of every skill was set-up, the State EMS Official or approved agent will need to re-orient Skill Examiners to a different skill before the same-day retest can begin. **Remember that no candidate may be retested on the same day in any skill by the original Skill Examiner.** If skills were duplicated at an examination site, retesting would be as simple as ensuring the candidate reports to the other skill for his/her retest. **The Examination Coordinator should also ensure that no candidate retests any skill before all other candidates have completed that skill on his/her initial attempt that day or else the examination will be excessively delayed.**

Perhaps the most difficult part of conducting a same-day retest is being able to score results, informing the candidate of his/her results, and notifying the Examination Coordinator of the candidates who can start retesting if any skill is available. Perhaps the most efficient way to conduct a same-day retest is when the State EMS Official or approved agent uses the following "Same-Day Retest Form" in this way:

1. Fill-in the candidate's name.
2. Record the candidate's results by marking the skill(s) the candidate has failed.
3. Somehow note the original skill the candidate failed (name of Skill Examiner, Scenario #, Room #, etc.).
4. Inform the candidate of his/her results in the usual fashion.
5. Only give the completed Same-Day Retest Form (see p. 51) to those candidates who are eligible to retest.
6. Instruct any candidate wanting to retest to turn-in this retest slip to the Examination Coordinator or Staging Officer.
7. When the Skill Examiners are prepared, the Examination Coordinator can begin the same-day retest

by sending the candidate to a skill that everyone has initially completed and is appropriately set-up for retesting.

When possible, conducting a same-day retest in this fashion is more efficient than waiting until every candidate has completed the psychomotor examination before starting to retest. The completed “Same-Day Retest Forms” help the Examination Coordinator to know who is eligible and ready to retest the moment the candidate hands him/her the Same-Day Retest form.

Same-Day Retest Form (Maine Revised – 5/9/16)

Candidate: _____

Original Skill Examiner:

Patient Assessment/Management – Trauma

Patient Assessment/Management – Medical

Random Skill Station “A”*

- Bleeding Control/Shock Management
- BVM Ventilation of an Apneic Adult Patient
- Cardiac Arrest Management/AED
- Oxygen Administration by Non-rebreather Mask

Random Skill Station “B”*

- Long Bone Immobilization
- Joint Immobilization
- ~~Spinal Immobilization (Seated Patient)~~
- ~~Spinal Immobilization (Supine Patient)~~

* Candidate must retest same station failed (Rev. 5/9/16)

Completion of the Psychomotor Examination

The State EMS Official or approved agent will be very busy scoring results, informing candidates of his/her unofficial results, and coordinating any same-day retest as Skill Examiners begin to finish the psychomotor examination and turn-in examination materials. The State EMS Official or approved agent should develop the following habit for collecting psychomotor examination materials to help ensure that no secure materials will be lost:

1. As the Skill Examiner turns-in material, ask yourself, “Is there any secure scenario information this Skill Examiner should be turning-in?” Remember that Patient Assessment/Management – Trauma and Patient Assessment/Management – Medical may have secure scenario information that needs to be collected before the Skill Examiner leaves the site.
2. **If the Skill Examiner was issued secure scenario information, stop transcribing examination results and re-inventory all secure information the Skill Examiner is turning-in. Immediately file the secure information in a safe area.**
3. Start three (3) separate piles of paperwork and file the remaining materials as follows:
 - a. Completed skill evaluation forms
 - b. “Blank” skill evaluation forms
 - c. Essays to the Skill Examiners
4. Briefly interview the Skill Examiner concerning any problems or areas of confusion that may have occurred before dismissing the Skill Examiner.
5. Continue transcribing results until the next Skill Examiner turns-in materials.

After all the results have been transcribed onto the EMT Psychomotor Examination Report Form, the State EMS Official or approved agent should pick up the report forms in alphabetical order and paper clip them to the completed roster. **Do not staple anything to the EMT Psychomotor Examination Report Forms and do not interfile any other materials with them.** Then the stacks of skill evaluation forms should be picked-up in alphabetical order and secured with a rubber band. The State EMS Official or approved agent should ensure the security of all psychomotor examination material until the psychomotor examination concludes. Any secure psychomotor examination materials should be inventoried upon completion of the psychomotor examination and again before leaving the examination site. The State EMS Official or approved agent should then promptly return all psychomotor examination materials to the State EMS Office.

Skill Examiner Responsibilities

Skill Examiners are responsible for the following:

- Conducting examination-related activities on an equal basis for all candidates, paying particular attention to eliminate actual or perceived discrimination based upon race, color, national origin, religion, gender, age, disability, position within the local EMS system, or any other potentially discriminatory factor.
- Objectively observing and recording each candidate's performance
- Acting in a professional, unbiased, non-discriminating manner, being cautious to avoid any perceived harassment of any candidate
- Providing consistent and specific instructions to each candidate by reading the "Instructions to the Psychomotor Skills Candidate" exactly as printed in the material provided by the NREMT. Skill Examiners must limit conversation with candidates to communication of instructions and answering of questions. **During COVID-19 the examiners will provide the cues that would have been otherwise provided by the simulated patient.** All Skill Examiners must avoid social conversation with candidates or making comments on a candidate's performance.
- Recording, totaling, and documenting all performances as required on all skill evaluation forms
- Thoroughly reading the specific essay for the assigned skill before actual evaluation begins
- Checking all equipment, props, and moulage prior to and during the examination
- **During COVID-19 only low fidelity mannikins will be used and examiners will provide the cues that would have been otherwise provided by the simulated patient.**
- Assuring professional conduct of all personnel involved with the particular skill throughout the examination
- Maintaining the security of all issued examination material during the examination and ensuring the return of all material to the State EMS Official or approved agent

Skill Examiner Qualifications

Skill Examiners should be recruited from the local EMS community. You should only consider people who are currently certified or licensed to perform the skill you wish them to evaluate. In addition, careful attention should be paid to avoid possible conflicts of interest, local political disputes, or any additional pre-existing conditions that could potentially bias the Skill Examiner towards a particular group or the entire group of candidates. **In no case should a primary instructor serve as a Skill Examiner for any of his/her own students.** Casual instructor staff may be utilized if necessary so long as they are not biased and do not evaluate any skill for which they served as the primary instructor. For example, the local PHTLS or ITLS instructor who taught the trauma portion of the candidates' class may not serve as the Patient Assessment/Management – Trauma Skill Examiner, but can be utilized to evaluate another skill so long as you feel he/she is not biased and is qualified to perform the skill to be evaluated.

Every effort should be made to select Skill Examiners who are fair, consistent, objective, respectful, reliable, and impartial in his/her conduct and evaluation. Skill Examiners should be selected based upon their expertise and understanding that there is more than one acceptable way to perform all skills. The Examination Coordinator should work to obtain Skill Examiners who are not acquainted with the candidates if possible. All Skill Examiners are responsible for the overall conduct of his/her skill evaluation area, ensuring the integrity and reliability of the examination and his/her skill, and for maintaining strict security of all examination-related items throughout the examination.

The selected examination team should represent a combination of out-of-hospital care providers and may also include nurses, physicians and other appropriately trained allied health personnel. All Skill Examiners should have experience in working with EMTs, teaching, or formal evaluation of psychomotor skills. The Skill Examiner should possess local credibility in the field of out-of-hospital care. We encourage recruitment of currently Nationally Registered EMTs to serve as Skill Examiners as they are already familiar with the examination process and possess a previously demonstrated expertise in the skill. If Nationally Registered EMTs are not available to staff all skills, you should select suitable personnel as outlined.

Examples and guidelines for qualifications of each Skill Examiner are explained in the following. Your State EMS Office should be consulted if you are unable to locate persons that satisfy the qualifications for Skill Examiners. Ultimate approval for assuring that examiners meet these minimum qualifications is at the discretion of the appropriate State EMS Official or approved agent. The designated State EMS Official or approved agent should have the authority to dismiss any Skill Examiner for due cause at any point during the psychomotor examination

Patient Assessment/Management – Trauma

The Patient Assessment/Management – Trauma Skill Examiner can be a Nationally Registered EMT or higher. A nurse, physician, or other appropriately trained allied health provider who is familiar with current out-of-hospital management of a trauma patient may also serve as an examiner for this skill. At a minimum, the examiner should have ample experience in providing patient care at the EMT level. The Skill Examiner should have previously completed a focused trauma care course, such as PHTLS, ITLS, or ATLS.

Patient Assessment/Management – Medical

The Patient Assessment/Management – Medical Skill Examiner can be a Nationally Registered EMT or higher. A nurse, physician, or other appropriately trained allied health provider who is familiar with current out-of-hospital management of a medical patient may also serve as an examiner for this skill. At a minimum, the examiner should have ample experience in providing patient care at the EMT level and previously completed a focused medical care course, such as EMPACT.

BVM Ventilation of an Apneic Adult Patient-or Oxygen Administration by Non-rebreather Mask

The BVM Ventilation of an Apneic Adult Patient or Oxygen Administration by Non-rebreather Mask Skill Examiner can be a Nationally Registered EMT or higher. A nurse, physician, or other appropriately trained allied health provider who is familiar with the various types of common airway adjuncts, oxygen delivery systems, and out-of-hospital care protocols for immediate ventilation of an apneic adult patient may also serve as an examiner for this skill. At a minimum, the examiner should have ample experience in providing patient care at the EMT level and be licensed to perform bag-valve-mask ventilation and operate various oxygen adjuncts and equipment to administer supplemental oxygen.

Cardiac Arrest Management/AED

The Cardiac Arrest Management/AED Skills Examiner can be a Nationally Registered EMT or higher. A nurse, physician, or other appropriately trained allied health provider who is familiar with the out-of-hospital care protocols for management of an adult patient in cardiac arrest may also serve as an examiner for this skill. At a minimum, the examiner should have ample experience in providing patient care at the EMT level and be certified to perform CPR and use an AED. The Skills Examiner should hold current credentials equivalent to the American Heart Association's BLS Instructor for Healthcare Providers.

Spinal Immobilization (Supine Patient) and other Random EMT Skills

The Spinal Immobilization (Supine Patient) Skills Examiner and other Random EMT Skills Examiner must be an EMT (Nationally Registered or state-certified) who is licensed to perform the following skills in the out- of-hospital setting:

1. Spinal Immobilization (Supine Patient) – will not be evaluated during COVID-19
2. Spinal Immobilization (Seated Patient) - will not be evaluated during COVID-19
3. Bleeding Control/Shock Management
4. Long Bone Immobilization
5. Joint Immobilization

A reputable, impartial EMT Instructor who thoroughly understands the principles and various acceptable practices of completing the above-listed skills is recommended to serve as a Skill Examiner for the Spinal Immobilization (Supine Patient) Skill and the other Random EMT Skills

ESSAYS TO SKILL EXAMINERS

Patient Assessment/Management – Trauma Essay to Skill Examiners

Thank you for serving as a Skill Examiner at today's examination. Before you read the specific essay for the skill you will be evaluating today, please take a few moments to review your general responsibilities as a Skill Examiner:

- Conducting examination-related activities on an equal basis for all candidates, paying particular attention to eliminate actual or perceived discrimination based upon race, color, national origin, religion, gender, age, disability, position within the local EMS system, or any other potentially discriminatory factor.
 - Objectively observing and recording each candidate's performance
 - Acting in a professional, unbiased, non-discriminating manner, being cautious to avoid any perceived harassment of any candidate
 - Providing consistent and specific instructions to each candidate by reading the "Instructions to the Psychomotor Skills Candidate" exactly as printed in the material provided by the National Registry. Skill Examiners must limit conversation with candidates to communication of instructions and answering of questions. All Skill Examiners must avoid social conversation with candidates or making comments on a candidate's performance.
 - Recording, totaling, and documenting all performances as required on all skill evaluation forms
 - Thoroughly reading the specific essay for the assigned skill before actual evaluation begins
 - Checking all equipment, props, and moulage prior to and during the examination
 - Playing the part of the simulated patient and responding appropriately per the established scenario
 - Assuring professional conduct of all personnel involved with the particular skill throughout the examination
 - Maintaining the security of all issued examination material during the examination and ensuring the return of all material to the State EMS Official or approved agent
- (4) This skill is designed to evaluate the candidate's ability to use appropriate interviewing techniques and assessment skills for a patient whose chief complaint is of a traumatic nature. Since this is a scenario-based skill using a low fidelity simulation manikin, it will require extensive dialogue between the candidate and the Skill Examiner. The Skill examiner will answer the candidate's questions based on the scenario being utilized today. The candidate will be required to physically perform all assessment steps listed on the evaluation form. All interventions should be verbalized instead of physically performed. You should also establish a dialogue with the candidate throughout this skill. You may ask questions for clarification purposes and should also provide any information pertaining to sight, sound, touch, or smell that cannot be realistically moulaged but would be immediately evident in a real patient encounter of a similar nature. You should also ensure the accuracy of the information you will be providing as contained in the scenario.

As you welcome a candidate into the room and read the "Instructions to the Psychomotor Skills Candidate" and scenario information, be sure to do this in such a manner which does not permit the candidate to view the Low Fidelity manikin. Other candidates waiting to test the skill must not be able to overhear any specific scenario information. It is easiest to have the candidate enter the room and turn his/her back to the low fidelity manikin. A partition set-up just inside of the entrance to your room that screens the Simulated Patient from view also works well. After all instructions and scenario information is read, the time limit would start when the candidate turns around and begins to approach the low fidelity manikin.

Candidates are required to perform a scene size-up just as he/she would in a field setting. When asked about the safety of the scene, you must indicate the scene is safe to enter. If the candidate does not assess the safety of the scene before beginning patient assessment or care, no points should be awarded for the step, "Determines the scene/situation is safe" and the related "Critical Criteria" statement must be checked and documented as required. Because of the limitations of moulage, you must establish a dialogue with the candidate throughout this skill. If a candidate quickly inspects, assesses or touches the low fidelity manikin in a manner in which you are uncertain of the areas or functions being assessed, you must immediately ask the candidate to explain his/her actions. For example, if the candidate stares at the low fidelity manikin's face, you must ask what he/she is checking to precisely determine if he/she was checking the eyes, facial injuries, or skin color. Any information pertaining to sight, sound, touch, smell, or any injury which cannot be realistically moulaged but would be immediately evident in a real patient (sucking chest wound, paradoxical chest movement, etc.) must be supplied by the Skill Examiner as soon as the candidate exposes or examines that area of the low fidelity manikin. Your responses must not be leading but should factually state what the candidate would normally see, hear, or feel on a similar patient in the out-of-hospital setting. For example, upon exposure of a sucking chest wound, your response should immediately be, "You see frothy blood bubbling from that wound and you hear noises coming from the wound site." You have provided an accurate and immediate description of the exposed wound by supplying the visual and auditory information normally present with this type of injury. An unacceptable response would be merely stating, "The injury you just exposed is a sucking chest wound."

Because of the dynamic nature of this scenario-based evaluation, you will need to supply logical vital signs and update the candidate on the low fidelity manikin's condition in accordance with the treatments he/she has provided. Clinical information not obtainable by inspection or palpation, such as a blood pressure or breath sounds, should be supplied immediately after the candidate properly verbally demonstrates how this information would normally be obtained in the field. The sample vital signs that you create with this scenario should serve as a sample of acceptable changes in the vital signs based upon the candidate's treatment. They are not comprehensive and we depend upon your expertise in presenting vital information that would reflect an appropriate response, either positive or negative, to the treatment(s) provided. The step "Takes vital signs" has been placed in the "Primary Survey/Resuscitation" section of the skill sheet. This should not be construed as the only place that vital signs may be assessed. It is merely the earliest point in the out-of-hospital assessment where a complete set of vital signs should be obtained in the multisystem trauma patient. It is acceptable for the candidate to call for immediate evacuation of the patient based upon the absence of distal pulses without obtaining an accurate BP measurement by sphygmomanometer. If this occurs, please direct the candidate to complete his/her assessment and treatment en route. All vital signs should be periodically reassessed en route.

You should continue providing a clinical presentation of shock (hypotension, tachycardia, delayed capillary refill, etc.) until the candidate initiates appropriate shock management. It is essential that you do not present a "physiological miracle" by improving the patient too much at too early a step. If on the other hand no treatments or inappropriate treatments are rendered, you should supply clinical information representing a deteriorating patient. However, do not deteriorate the patient to the point where the candidate elects to initiate CPR.

Because all treatments are voiced, a candidate may forget what he/she has already done to the patient. This may result in the candidate attempting to do assessment/treatment steps on the patient that are physically impossible. For example, a candidate may attempt to assess the posterior thorax of the patient after the patient was log rolled and secured to a long backboard. Your appropriate response in this instance would be, "You have secured the patient to the long backboard. How would you assess the posterior thorax?"

The evaluation form should be reviewed prior to testing any candidate. You should direct any specific questions to the State EMS Official or approved agent for clarification prior to beginning any evaluation. As you look at the evaluation form, its format implies a linear, top-to-bottom progression in which the candidate completes several distinct categories of assessment. However, as you will recall, the goal of appropriate out-of-hospital trauma care is the rapid and sequential assessment, evaluation, and treatment of life-threatening conditions to the airway, breathing, and circulation (ABCs) of the patient with rapid transport to proper definitive care. For this reason, perhaps the most appropriate assessment occurs when the candidate integrates portions of the "Secondary Assessment" when appropriate within the sequence of the "Primary Survey/Resuscitation." For example, it is acceptable for the candidate who, after appropriately opening and evaluating the low fidelity manikin's airway, assesses breathing by exposing and palpating the chest and quickly checks for tracheal deviation. With this in mind, you can see how it is acceptable to integrate assessment of the neck, chest, abdomen/pelvis, lower extremities, and posterior thorax, lumbar and buttocks area into the "Primary Survey/Resuscitation" sequence as outlined on the evaluation form. This integration should not occur in a haphazard manner but should fall in the appropriate sequence and category of airway, breathing, or circulatory assessment of the "Primary Survey/Resuscitation." These areas have been denoted by ** on the skill evaluation form in the "Secondary Assessment" section. However, if the mechanism of injury suggests potential spinal compromise, cervical spine precautions may not be disregarded at any point. If this action occurs, deduct the point for the step, "Considers stabilization of the spine," mark the appropriate statement under "Critical Criteria" and document your rationale as required.

We strongly recommend that you concisely document the entire performance on the backside of the evaluation form, especially if you find yourself too involved with the form in finding the appropriate sections to note and mark during any performance. It is easier to complete the evaluation form with all performances documented in this fashion rather than visually missing a physical portion of the candidate's assessment due to your involvement with the evaluation form. This documentation may also be used to help validate a particular performance if questions arise later.

Immediately upon determining the severity of the low fidelity manikin's injuries, the candidate should call for immediate packaging and transport of the patient. A request for a transporting EMS service should not be delayed if prolonged extrication is not a consideration. You should inform the candidate to continue his/her assessment and treatment while awaiting arrival of the transporting unit. Be sure to remind the candidate that both "partners" are available during transport. You should stop the candidate promptly when the fifteen (15) minute time limit has elapsed. Some candidates may finish early and have been instructed to inform you when he/she completes the skill. If the candidate has not voiced transport of the Simulated Patient within this time limit, mark the appropriate statement under "Critical Criteria" on the evaluation form and document this omission.

You should review the scenario and instructions to assist in your role providing the cues of the simulated patient.

- A clearly defined mechanism of injury must be included. The mechanism of injury must indicate the need for the candidate to suspect multisystem trauma.
- The simulated patient must be on the floor. If any candidate insists on having the low fidelity manikin moved to a different location, you should immediately dismiss the candidate and notify the State EMS Official or approved agent.
- The simulated patient must at least respond to pain by moaning or mumbling.
- There must be at least one problem with the airway, breathing and circulatory status of the simulated patient.

- There must be an additional associated soft tissue or musculoskeletal injury.
- Vital signs should be prepared that represent a severely injured multisystem trauma patient.

An acceptable scenario should be developed like the following sample:

- Mechanism of injury: You respond to a car crash and find an ejected victim. He is laying 60 feet from the overturned car.
- Injuries:
 - Moans to pain
 - Right side flail chest
 - Decreased breath sounds on the right
 - Pale, cool, moist skin
 - Weak, rapid carotid pulse palpable
 - Pupils equal and sluggish
 - Pelvis stable
 - Closed, angulated deformity to the right lower leg
- Vital signs
- Initial: BP 72/60, P 138, R 28 and SpO₂ no reading displayed
Recheck with appropriate treatment: BP 92/74, P 118, R 22 and SpO₂ is 93%
Recheck with inappropriate treatment: BP 68/48, P 142, R 38 and SpO₂ no reading displayed

Outer garments should be provided which the candidate should remove to expose the low fidelity manikin. If prepared garments are not available, you should pre-cut all outer garments along the seams and tape them together before any candidate enters your room. This will help ensure that all candidates are evaluated fairly in his/her ability to expose and examine the low fidelity manikin. Pay particular attention to your moulage and make it as realistic as you would expect in a similar out-of-hospital situation. For example, artificial blood should be soaked into the garments worn over any soft tissue injury that would normally bleed in the field. A small tear should be cut into the clothing to represent the location of the stab wound. Remember, realistic and accurate moulage improves the quality of the examination by providing for more fair and accurate evaluation of the candidates.

Equipment List

Do not open this skill for testing until the State EMS Official or approved agent has provided you with an approved trauma scenario. You should have a low fidelity manikin moulaged appropriately for the scenario. The following equipment should also be available and you should ensure that it is working adequately throughout the examination:

- Examination gloves
- Moulage kit or similar substitute
- Outer garments to be cutaway
- Penlight
- Blood pressure cuff
- Stethoscope
- Scissors
- Blanket
- Tape (for outer garments)

INSTRUCTIONS TO THE PSYCHOMOTOR SKILLS CANDIDATE FOR PATIENT ASSESSMENT/MANAGEMENT – TRAUMA

Welcome to the Patient Assessment/Management - Trauma skill. In this skill, you will have fifteen (15) minutes to perform your assessment and "voice" treat all conditions and injuries discovered. You should conduct your assessment as you would in the field, including communicating with your Simulated Patient. You may remove the Simulated Patient's clothing down to his/her shorts or swimsuit if you feel it is necessary. As you progress through this skill, you should state everything you are assessing. Specific clinical information not obtainable by visual or physical inspection, for example blood pressure, will be given to you only when you ask following demonstration of how you would normally obtain that information in the field. You may assume you have two (2) partners working with you who are trained to your level of care. They will correctly perform the verbal treatments you indicate necessary. I will acknowledge your treatments and may ask you for additional information if clarification is needed. Do you have any questions?

[Skill Examiner now reads "Mechanism of Injury" from prepared scenario and begins 15 minute time limit.]

Patient Assessment/Management – Medical Essay to Skill Examiners

Thank you for serving as a Skill Examiner at today's examination. Before you read the specific essay for the skill you will be evaluating today, please take a few moments to review your general responsibilities as a Skill Examiner:

- Conducting examination-related activities on an equal basis for all candidates, paying particular attention to eliminate actual or perceived discrimination based upon race, color, national origin, religion, gender, age, disability, position within the local EMS system, or any other potentially discriminatory factor.
- Objectively observing and recording each candidate's performance
- Acting in a professional, unbiased, non-discriminating manner, being cautious to avoid any perceived harassment of any candidate
- Providing consistent and specific instructions to each candidate by reading the "Instructions to the Psychomotor Skills Candidate" exactly as printed in the material provided by the National Registry. Skill Examiners must limit conversation with candidates to communication of instructions and answering of questions. All Skill Examiners must avoid social conversation with candidates or making comments on a candidate's performance.
- Recording, totaling, and documenting all performances as required on all skill evaluation forms
- Thoroughly reading the specific essay for the assigned skill before actual evaluation begins
- Checking all equipment, props, and moulage prior to and during the examination
- Playing the part of the simulated patient and responding appropriately per the established scenario
- Assuring professional conduct of all personnel involved with the particular skill throughout the examination
- Maintaining the security of all issued examination material during the examination and ensuring the return of all material to the State EMS Official or approved agent

This skill is designed to evaluate the candidate's ability to use appropriate interviewing techniques and assessment skills for a patient whose chief complaint is of a medical nature. Since this is a scenario-based skill using a low fidelity simulation manikin, it will require extensive dialogue between the candidate and the Skill Examiner. The Skill examiner will answer the candidate's questions based on the scenario being utilized today. The candidate will be required to physically perform all assessment steps listed on the evaluation form. All interventions should be verbalized instead of physically performed. You should also establish a dialogue with the candidate throughout this skill. You may ask questions for clarification purposes and should also provide any information pertaining to sight, sound, touch, or smell that cannot be realistically moulaged but would be immediately evident in a real patient encounter of a similar nature. You should also ensure the accuracy of the information you will be providing as contained in the scenario.

This skill requires the presence of a low fidelity simulation manikin. The skill examiner will provide the cues of the simulated patient and respond appropriately per the scenario provided. The scenario that you develop must contain enough information for the candidate to form a general impression of the simulated patient's condition. Additionally, the cues for the simulated patient include they should remain awake and able to communicate with the candidate throughout the scenario. Please moulage the low fidelity manikin and review your role for the examination. You should ensure that you have read the information for the simulated patient" provided at the end of this essay. You should familiarize yourself with the scenario prior to evaluating the first candidate. Provide any specific information the candidate asks for as listed in the scenario. If the candidate asks for information not listed in the scenario, you should provide an appropriate response based on your expertise and

understanding of the patient's condition.

Information pertaining to vital signs should not be provided until the candidate verbally cues the skills examiner when/how they would be obtained. Each candidate must demonstrate to the extent possible how they would obtain vital signs, including blood pressure, pulse rate and respiratory rate on the simulated low fidelity manikin.

As you welcome a candidate into the room and read the "Instructions to the Psychomotor Skills Candidate" and scenario information, be sure to do this in such a manner which does not permit the candidate to view the simulated patient manikin. Other candidates waiting to test the skill should not be able to overhear any specific scenario information. It is easiest to have the candidate enter the room and turn his/her back to the simulated patient manikin. A partition set-up just inside of the entrance to your room that screens the simulated patient manikin from view also works well. After all instructions and scenario information is read, the time limit would start when the candidate turns around and begins to approach the simulated patient manikin.

Candidates are required to evaluate the scene just as he/she would in a field setting. When asked about the safety of the scene, you should indicate the scene is safe to enter. If the candidate does not assess the safety of the scene before beginning patient assessment or care, no points should be awarded for the step, "Determines the scene/situation is safe" and the related "Critical Criteria" statement should be checked and documented as required.

Because of the limitations of moulage and the use of a low fidelity manikin, you should establish a dialogue with the candidate throughout this skill. If a candidate quickly inspects, assesses or touches the simulated patient manikin in a manner in which you are uncertain of the areas or functions being assessed, you should immediately ask the candidate to explain his/her actions. For example, if the candidate stares at the simulated patient manikin's face, you should ask what he/she is checking to precisely determine if he/she was checking the eyes, facial injuries, or skin color. Any information pertaining to sight, sound, touch, smell, or any condition that cannot be realistically moulaged, but would be immediately evident in a real patient should be supplied by the Skill Examiner as soon as the candidate exposes or examines that area of the simulated patient manikin. Your responses should not be leading, but should factually state what the candidate would normally see, hear, or feel on a similar patient in the out-of-hospital setting. For example, you should state, "You see pink, frothy sputum coming from the patient's mouth as he/she coughs." You have provided an accurate and immediate description of the condition by supplying a factual description of the visual information normally present in the patient but is difficult to moulage. An unacceptable response would be merely stating, "The patient is experiencing left heart failure."

Because of the dynamic nature of this scenario-based evaluation, you will need to supply logical vital signs and update the candidate on the simulated patient manikin's condition in accordance with the treatments he/she has provided. Clinical information not obtainable by inspection or palpation, such as a blood pressure, should be supplied immediately after the candidate properly demonstrates to the extent possible how this information would normally be obtained in the field. The sample vital signs that you create with this scenario should serve as a sample of acceptable changes in the simulated patient's vital signs based upon the candidate's treatment. They are not comprehensive and we depend upon your expertise in presenting vital information that would reflect an appropriate response, either positive or negative, to the treatment(s) provided. You should continue providing a clinical presentation of a patient with a significant medical complaint as outlined in the scenario until the candidate initiates appropriate management. It is essential that you do not present a "physiological miracle" by improving the simulated patient too much at too early a step. If on the other hand no or inappropriate interventions are rendered, you should supply clinical information representing a patient who does not improve. However, do not deteriorate the simulated patient to the point where he/she can no longer

communicate with the candidate.

Two imaginary EMT assistants are available only to provide treatments as ordered by the candidate. Because all treatments are voiced, a candidate may forget what he/she has already done to the simulated patient manikin. This may result in the candidate attempting to do assessment/treatment steps on the simulated patient manikin that are physically impossible. For example, a candidate may attempt to assess the back of a simulated patient manikin who was found supine in bed. Your appropriate response in this instance would be, “Please assess this simulated patient manikin as you would a real patient in the out-of-hospital setting.”

The evaluation form should be reviewed prior to evaluating any candidate. You should direct any specific questions to the in-charge person for clarification prior to opening your skill. As you look at the evaluation form, its format implies a linear, top-to-bottom progression in which the candidate completes several distinct categories of assessment. However, as you will recall, after completing the “Primary Survey/Resuscitation” and determining that the patient does not require immediate and rapid transport, the steps listed in the “History Taking/Secondary Assessment” section may be completed in any number of acceptable sequences. If the mechanism of injury suggests potential spinal compromise, immediate and continuous cervical spine precautions should be taken. If not, deduct the point for the step, “Considers stabilization of spine,” mark the appropriate statement under "Critical Criteria" and document your rationale as required.

We strongly recommend that you concisely document the entire performance on the backside of the evaluation form, especially if you find yourself too involved with the form in finding the appropriate sections to note and mark during any performance. It is easier to complete the evaluation form with all performances documented in this fashion rather than visually missing a physical portion of the candidate's assessment due to your involvement with the evaluation form. This documentation may also be used to help validate a particular performance if questions should arise later.

Immediately after completing the “Primary Survey/Resuscitation,” the candidate should make the appropriate decision to continue assessment and treatment at the scene or call for immediate transport of the patient. In the critical patient, transport to the nearest appropriate facility should not be significantly delayed for providing interventions or performing other assessments if prolonged extrication or removal is not a consideration. You should inform the candidate who chooses to immediately transport the critical patient to continue his/her “Secondary Assessment” while awaiting arrival of the EMS vehicle. Be sure to remind the candidate that both "partners" are also available. You should stop the candidate promptly after he/she completes a verbal report to an arriving EMS unit or when the twenty (20) minute time limit has elapsed. Some candidates may finish early and have been instructed to inform you when he/she completes the skill. If the candidate has not voiced transport of the simulated patient within this time limit, mark the appropriate statement under "Critical Criteria" on the evaluation form and document this omission.

You should review the scenario and instructions thoroughly prior to accepting your first candidate.

- There must be a clearly defined nature of the illness. The patient or a bystander should be able to communicate relevant information to the candidate when asked.
- The patient’s chief complaint must be clearly related to the nature of the illness.
- The history of the present illness, past medical history, and physical findings in the affected body systems must be related to the chief complaint and nature of the illness.
- Vital signs should be prepared that represent the usual findings in a patient with these pathologies.

An acceptable scenario should be developed like the following sample:

- Nature of the call: You arrive at a residence and find a 61 year old male on home oxygen. He appears overweight and is sitting in a tripod position in the chair. He is breathing rapidly and you observe cyanosis around his lips, fingers and capillary beds.
- Chief complaint: “I can’t breathe. (coughing) I need to go to the hospital.” (more coughing)
- Breathing: 28 and labored; pursed lips
- Circulation: Pulse 120 and strong
- Onset: “Breathing has gotten worse over the past 2 days.”
- Provokes: “Gets really bad when I use the stairs.”
- Quality: “Can’t seem to catch my breath.”
- Radiate: “No pain anywhere else.”
- Severity: “I think I’m dying. I can’t stop coughing.”
- Time: “Woke me up 3 hours ago. Still can’t catch my breath.”
- Interventions: “I turned up the oxygen to 3 L/minute about 1 hour ago.”
- Allergies: Penicillin, bee stings
- Medications: Oxygen, hand-held inhaler (bronchodilator)
- Past medical history: 10 year history of emphysema
- Last meal: “I ate breakfast this morning.”
- Vital signs: BP 140/88, P 120, R 28 and SpO₂ is 87% on 3 L/minute nasal canula
- Mentation: Alert and appropriately oriented to person, place, and time

We recommend that scenarios be developed and utilized for the following types of patient presentations:

- Respiratory
- Cardiac (non-arrest presentation)
- Neurological (to include stroke, altered mental status, and syncope)
- Allergic Reaction
- Poisoning/Overdose
- Environmental Emergency
- Obstetrics
- Abdominal Pain

Be sure to respond as a real patient would given all conditions listed in the scenario that you have prepared. Also make sure you describe any acts, movements, and responses appropriately given the scenario just as a real patient would. All Simulated Patient manikins should be of adults or adolescent size who are greater than sixteen (16) years of age. All Simulated Patient manikins should also be of average adult height and weight. Outer garments should be provided which the candidate should remove to expose the Simulated Patient manikin. If prepared garments are not available, you should pre-cut all outer garments along the seams and tape them together before any candidate enters your room. This will help ensure that all candidates are evaluated fairly in his/her ability to expose and examine the Simulated Patient manikin. Pay particular attention to your moulage and make it as realistic as you would expect in a similar out-of-hospital situation. For example, the shirt should be soaked with water if the patient's skin is moist. Remember, realistic and accurate moulage improves the quality of the examination by providing for more fair and accurate evaluation of the candidates.

Information for Skill Examiner who will provide the cues of the Simulated Patient

Thank you for serving as the Simulated Patient at today's examination. In this examination, you will be required to role-play a patient experiencing an acute medical condition. Please be consistent in presenting this scenario to every candidate who tests in your room today. The level of responsiveness, anxiety, respiratory distress, etc., which you act out should be the same for all candidates. It is important to respond as a real patient with a similar medical complaint would. For example, the level of respiratory distress that you should act out should be consistently displayed throughout the examination.

As each candidate progresses through the skill, please be aware of any questions you are asked and respond appropriately given the information in the scenario. Do not overact or provide additional signs or symptoms not listed in the scenario. It is very important to be completely familiar with all of the information in today's scenario before any candidate enters your room for testing. If any candidate asks for information not contained in the scenario, you will supply appropriate responses to questions. Do not give the candidate any clues while you are acting as a patient. It is inappropriate to moan that your belly really hurts after you become aware that the candidate has not assessed your abdomen.

Equipment List

Do not open this skill for testing until the State EMS Official or approved agent has provided you with an approved medical assessment scenario. You should also have a low fidelity manikin to use as a simulated patient that is of an adult or adolescent greater than sixteen (16) years of age. The low fidelity manikin should also be of average adult height and weight and dressed in appropriate attire (shorts or swimsuit) down to which he/she will be exposed. The following equipment should also be available and you should ensure that it is working adequately throughout the examination:

- Examination gloves
- Moulage kit or similar substitute
- Outer garments to be cutaway
- Watch with second hand
- Penlight
- Blood pressure cuff
- Stethoscope
- Scratch paper and pencil/pen
- Scissors
- Blanket
- Tape (for outer garments)

INSTRUCTIONS TO THE PSYCHOMOTOR SKILLS CANDIDATE FOR PATIENT ASSESSMENT/MANAGEMENT – MEDICAL

This is the Patient Assessment/Management - Medical skill. In this skill, you will have twenty (20) minutes to perform your assessment, patient interview, and "voice" treat all conditions discovered. You should conduct your assessment as you would in the field, including communicating with your skill examiners, who will be responding as the simulated patient. You may remove the simulated patient manikin's clothing down to his/her shorts or swimsuit if you feel it is necessary.

As you progress through this skill, you should state everything you are assessing. Specific clinical information not obtainable by visual or physical inspection, for example blood pressure, should be obtained by demonstrating to the extent possible on the Simulated Patient manikin just as you would in the out-of-hospital setting. You may assume you have two (2) partners working with you who are trained to your level of care. They can only perform the interventions you indicate necessary and I will acknowledge all interventions you order. I may also supply additional information and ask questions for clarification purposes. Do you have any questions?

[Skill Examiner now reads "Entry Information" from approved scenario and begins 20 minute time limit.]

Bag-Valve-Mask Ventilation of an Apneic Adult Patient Or Oxygen Administration by Non-rebreather Mask Essays to Skill Examiners

Thank you for serving as a Skill Examiner at today's examination. Before you read the specific essay for the skill you will be evaluating today, please take a few moments to review your general responsibilities as a Skill Examiner:

- Conducting examination-related activities on an equal basis for all candidates, paying particular attention to eliminate actual or perceived discrimination based upon race, color, national origin, religion, gender, age, disability, position within the local EMS system, or any other potentially discriminatory factor.
- Objectively observing and recording each candidate's performance
- Acting in a professional, unbiased, non-discriminating manner, being cautious to avoid any perceived harassment of any candidate
- Providing consistent and specific instructions to each candidate by reading the "Instructions to the Psychomotor Skills Candidate" exactly as printed in the material provided by the National Registry. Skill Examiners must limit conversation with candidates to communication of instructions and answering of questions. All Skill Examiners must avoid social conversation with candidates or making comments on a candidate's performance.
- Recording, totaling, and documenting all performances as required on all skill evaluation forms
- Thoroughly reading the specific essay for the assigned skill before actual evaluation begins
- Checking all equipment, props, and moulage prior to and during the examination
- Assuring professional conduct of all personnel involved with the particular skill throughout the examination
- Maintaining the security of all issued examination material during the examination and ensuring the return of all material to the State EMS Official or approved agent

In this skill, the candidate will have fifteen (15) minutes to provide ventilatory assistance to an apneic patient who has a weak carotid pulse and no other associated injuries. The patient is found supine and unresponsive on the floor. **The adult manikin must be placed and left on the floor for these skills.** If any candidate insists on moving the patient to a different location, you should immediately dismiss the candidate and notify the State EMS Official or approved agent. For the purposes of this evaluation, the cervical spine is intact and cervical precautions are **not** necessary. This skill was developed to simulate a realistic situation where an apneic patient with a palpable carotid pulse is found. Bystander ventilations have not been initiated. A two (2) minute time period is provided for the candidate to check and prepare any equipment he/she feels necessary before the actual timed evaluation begins. When the actual timed evaluation begins, the candidate must immediately assess the patient's responsiveness and breathing for at least 5 seconds but no more than 10 seconds in accordance with 2015 American Heart Association Guidelines for CPR and Emergency Cardiovascular Care. You should then inform the candidate that the patient is unresponsive and there are no signs of breathing. After requesting additional EMS assistance, the candidate should check for a carotid pulse for at least 5 seconds but no more than 10 seconds. You should then inform the candidate that a weak carotid pulse of 60 is present. The candidate should next open the patient's airway and assess for breathing. Immediately you should inform the candidate that he/she observes secretions and vomitus in the patient's mouth. The candidate should attach the

rigid suction catheter to the suction unit and operate the equipment correctly to suction the patient's mouth and oropharynx. Either electrical or manual suction units are acceptable and must be working properly in order to assess each candidate's ability to suction a patient properly. If the suctioning attempt is prolonged and excessive, you should check the related "Critical Criteria" and document the exact amount of time the candidate suctioned the patient. After suctioning is complete, you should then inform the candidate that the mouth and oropharynx are clear.

The candidate should then initiate ventilation using a bag-valve-mask device unattached to supplemental oxygen. If a candidate chooses to set-up the reservoir and attach supplemental oxygen to the BVM device prior to establishing a patent airway and ventilating the patient, it must be accomplished within thirty (30) seconds of beginning his/her performance. The point for this step should be awarded and is explained on the skill evaluation form (denote by **). **Regardless of the candidate's initial ventilatory assistance (either with room air or supplemental oxygen attached), it must be accomplished after body substance isolation precautions have been taken and within the initial thirty (30) seconds *after taking body substance isolation precautions* or the candidate has failed to ventilate an apneic patient immediately.** It is acceptable to insert an oropharyngeal airway prior to ventilating the patient with either room air or supplemental oxygen. You must inform the candidate that no gag reflex is present when he/she inserts the oropharyngeal airway.

After the candidate begins ventilation, you must inform the candidate that ventilation is being performed without difficulty. It is acceptable to re-check the pulse at this point while ventilations continue. The candidate should also call for integration of supplemental oxygen at this point in the procedure if it was not attached to the BVM initially. If candidate asks evaluator to ventilate patient while they hook O₂ to the BVM, the evaluator will decline and not penalize the candidate. If two or more testing rooms are set-up and one is using a disposable BVM, be sure to leave the mask and reservoir attached to all the non-disposable BVMs throughout the examination. To assist in containing costs of the psychomotor examination, the oxygen tank used may be empty for this skill. The candidate must be advised to act as if the oxygen tank were full. However, the supplemental oxygen tubing, regulator, BVM, and reservoir should be in working order. (Note: The oxygen tank and regulator will be assembled by the examiner for the BVM skill prior to candidate arrival; the candidate will not be required to assemble the oxygen tank/regulator for the BVM station. Candidates are required to set-up the oxygen and regulator assembly for the Oxygen Administration skill station.)

After supplemental oxygen has been attached, the candidate must oxygenate the patient by ventilating at a rate of 10 – 12 ventilations/minute with adequate volumes of oxygen-enriched air. Ventilation rates in excess of 12/minute have been shown to be detrimental to patient outcomes. **It is important to time the candidate for at least one (1) minute to confirm the proper ventilation rate.** It is also required that an oxygen reservoir (or collector) be attached. Should the candidate connect the oxygen without such a reservoir or in such a way as to bypass its function, he/she will have failed to provide a high percentage (at least 85%) of supplemental oxygen. You must mark the related statement under "Critical Criteria" and document his/her actions. Determination of ventilation volumes is dependent upon your observations of technique and the manikin's response to ventilation attempts. For the purposes of this evaluation form, a proper volume is defined as a ventilation that causes visible chest rise. Be sure to ask the candidate, "How would you know if you are delivering appropriate volumes with each ventilation?" Be sure to document any incorrect responses and check any related "Critical Criteria" statements. After the candidate ventilates the patient with supplemental oxygen for at least one (1) minute, you should stop the candidate's performance.

Throughout this skill, the candidate should take or verbalize appropriate body substance isolation precautions. At a minimum, examination gloves must be provided as part of the equipment available in the room. Masks, gowns, and eyewear may be added to the equipment for these skills but are not required for evaluation purposes

in order to help contain costs of the psychomotor examination. If the candidate does not protect himself/herself with at least gloves before touching the patient or attempts direct mouth-to-mouth ventilation without a barrier, appropriate body substance isolation precautions have not been taken. Should this occur, mark the appropriate statement under "Critical Criteria" and document the candidate's actions as required.

Oxygen Administration by Non-rebreather Mask

This skill is designed to test the candidate's ability to correctly assemble the equipment needed to administer supplemental oxygen in the out-of-hospital setting. A two (2) minute time period is provided for the candidate to check and prepare any equipment he/she feels necessary before the actual timed evaluation begins. The candidate will then have fifteen (15) minutes to assemble the oxygen delivery system and deliver an acceptable oxygen flow rate to a patient using a non-rebreather mask.

When the actual timed evaluation begins, the candidate will be instructed to assemble the oxygen delivery system and administer oxygen to the simulated patient manikin using a non-rebreather mask. During this procedure, the candidate must check for tank or regulator leaks as well as assuring a tight mask seal to the patient's face. If any leak is found and not corrected, you should deduct the point, check the related "Critical Criteria" and document the actions. You should do the same if the candidate cannot correctly assemble the regulator to the oxygen tank or operate the regulator and delivery device in a safe and acceptable manner.

Oxygen flow rates are normally established according to the patient history and patient condition. Since this is an isolated skills verification of oxygen administration by non-rebreather mask, oxygen flow rates of at least 10 L/minute are acceptable. Once the oxygen flow rate has been set, you should direct the candidate to stop his/her performance and end the skill.

The equipment needed for these skills is listed below. The oxygen tank must be fully pressurized for this skill (air or oxygen) and the regulator/flow meter must be functional. The simulated patient will be an airway manikin or low fidelity manikin. However, the manikin must be anatomically complete and include ears, nose and mouth.

Equipment List

Do not open this skill for testing until the following equipment is available. You must ensure that all equipment is working adequately throughout the examination. All equipment must be disassembled (reservoir disconnected and oxygen supply tubing disconnected when using only non-disposable equipment, regulator turned off, etc.) before accepting a candidate for evaluation:

- Examination gloves (may also add masks, gowns, and eyewear)
- Intubation manikin or low fidelity manikin (adult)
- Bag-valve-mask device with reservoir (adult)
- Oxygen cylinder with regulator:
 - One must be fully pressurized with air or oxygen in order to test oxygen administration by non-rebreather mask. A second empty oxygen cylinder may be used to test BVM ventilation of an apneic adult patient.
- Oxygen connecting tubing
- Selection of oropharyngeal airways (adult)
- Suction device (electric or manual) with rigid catheter and appropriate suction tubing
- Various supplemental oxygen delivery devices (nasal cannula, non-rebreather mask with reservoir, etc. for an adult)
 - Stethoscope
 - Tongue blade

INSTRUCTIONS TO THE PRACTICAL SKILLS CANDIDATE FOR BAG-VALVE-MASK VENTILATION OF AN APNEIC ADULTPATIENT

This skill is designed to evaluate your ability to provide immediate and aggressive ventilatory assistance to an apneic adult patient who has no other associated injuries. This is a non-trauma situation and cervical precautions are not necessary. You are required to demonstrate sequentially all procedures you would perform, from simple maneuvers, suctioning, adjuncts, and ventilation with a BVM.

You must actually ventilate the manikin for at least one (1) minute with each adjunct and procedure utilized. I will serve as your trained assistant and will be interacting with you throughout this skill. I will correctly carry-out your orders upon your direction. Do you have any questions?

At this time, please take two (2) minutes to check your equipment and prepare whatever you feel is necessary.

[After two (2) minutes or sooner if the candidate states, "I'm prepared," the Skill Examiner continues reading the following:]

Upon your arrival to the scene, you find a patient lying motionless on the floor. Bystanders tell you that the patient suddenly became unresponsive. The scene is safe and no hemorrhage or other immediate problem is found. You have fifteen (15) minutes to complete this skill.

INSTRUCTIONS TO THE PRACTICAL SKILLS CANDIDATE FOR OXYGEN ADMINISTRATION BY NON-REBREATHER MASK

This skill is designed to evaluate your ability to provide supplemental oxygen administration by non-rebreather mask to an adult patient. The patient has no other associated injuries. This is a non-trauma situation and cervical precautions are not necessary. You will be required to assemble an oxygen tank and a regulator. You will then be required to administer oxygen to an adult patient using a non-rebreather mask. I will serve as your trained assistant and will be interacting with you throughout this skill. I will correctly carry-out your orders upon your direction. Do you have any questions?

At this time, please take two (2) minutes to check your equipment and prepare whatever you feel is necessary.

[After two (2) minutes or sooner if the candidate states, "I'm prepared," the Skill Examiner continues reading the following:]

A 45 year old male is short of breath. His lips are cyanotic and he is confused. You have fifteen (15) minutes to administer oxygen by non-rebreather mask.

Cardiac Arrest Management/AED Essay to Skill Examiners

Thank you for serving as a Skill Examiner at today's examination. Before you read the specific essay for the skill you will be evaluating today, please take a few moments to review your general responsibilities as a Skill Examiner:

- Conducting examination-related activities on an equal basis for all candidates, paying particular attention to eliminate actual or perceived discrimination based upon race, color, national origin, religion, gender, age, disability, position within the local EMS system, or any other potentially discriminatory factor.
- Objectively observing and recording each candidate's performance
- Acting in a professional, unbiased, non-discriminating manner, being cautious to avoid any perceived harassment of any candidate
- Providing consistent and specific instructions to each candidate by reading the "Instructions to the Psychomotor Skills Candidate" exactly as printed in the material provided by the National Registry. Skill Examiners must limit conversation with candidates to communication of instructions and answering of questions. All Skill Examiners must avoid social conversation with candidates or making comments on a candidate's performance.
- Recording, totaling, and documenting all performances as required on all skill evaluation forms
- Thoroughly reading the specific essay for the assigned skill before actual evaluation begins
- Checking all equipment, props, and moulage prior to and during the examination
- Assuring professional conduct of all personnel involved with the particular skill throughout the examination
- Maintaining the security of all issued examination material during the examination and ensuring the return of all material to the State Official or approved agent

This station is designed to test the NREMT candidate's ability to effectively manage an unwitnessed out-of-hospital cardiac arrest by integrating scene management skills, CPR skills, and usage of the AED. The candidate arrives on scene to find an apneic and pulseless adult patient who is lying on the floor. ***The manikin must be placed and left on the floor for this skill.*** This is an unwitnessed cardiac arrest scenario and no bystander CPR has been initiated. After performing 2 minutes (about 5 cycles) of hands only adult CPR, the candidate is required to utilize the AED as he/she would at the scene of an actual cardiac arrest. The scenario ends after the first shock is administered and CPR is resumed.

After arriving on the scene, the candidate should assess the patient and determine that the patient is unresponsive. The candidate should then assess the patient for signs of breathing. If it is determined that the patient is apneic or has signs of abnormal breathing, such as gasping or agonal respirations, the candidate should next assess the carotid pulse. This pulse check must take at least five (5) but no more than ten (10) seconds. As soon as pulselessness is verified, the candidate should immediately begin chest compressions. The candidate should request additional EMS assistance after determining that the patient is in cardiac arrest and CPR has been initiated. All actions performed must be in accordance with the current AHA Guidelines for CPR and Emergency Cardiovascular Care. Any candidate who elects to perform any other intervention or assessment causing delay in chest compressions has not properly managed the situation. You should check the related "Critical Criteria" and document the delay.

Each candidate is required to perform 2 minutes (about 5 cycles) of hands only CPR. Because high-quality CPR has been shown to improve patient outcomes from out-of-hospital cardiac arrest, you should watch closely as the candidate performs CPR to assure adherence to the current recommendations:

- Adequate compression depth and rate
- Allows the chest to recoil completely
- Correct compression-to-ventilation ratio
- No interruptions of more than 10 seconds at any point

After 5 cycles or 2 minutes of 1-rescuer CPR, you as the examiner announces the “second rescuer” and AED have arrived. The candidate should direct a second rescuer to verbalize resuming chest compressions. The candidate then retrieves the AED, powers it on, follows all prompts and attaches it to the manikin. Even though an AED trainer should be used in this skill, safety should still be an important consideration. The candidate should make sure that no one is touching the patient while the AED analyzes the rhythm. The AED should then announce, “Shock advised” or some other similar command. Each candidate is required to operate the AED correctly so that it delivers one shock for verification purposes. As soon as the shock has been delivered, the candidate should direct a rescuer to immediately resume chest compressions. At that point, the scenario should end and the candidate should be directed to stop. Be sure to follow all appropriate disinfection procedures before permitting the next candidate to use the manikin and complete the skill.

Please realize the Cardiac Arrest Management/AED Skill is device-dependent to a degree. Therefore, give each candidate time for familiarization with the equipment in the room before any evaluation begins. You may need to point out specific operational features of the AED, but are not permitted to discuss patient treatment protocols or algorithms with any candidate. Candidates are also permitted to bring their own equipment to the psychomotor examination. If any enter your skill carrying their own AED, be sure that the State EMS Official or approved agent has approved it for testing and you are familiar with its appropriate operation before evaluating the candidate with the device. You should also be certain that the device will safely interface with the manikin. The manikin must be placed on the floor in this skill. It is not permissible to move the manikin to a table, bed, etc. This presentation most closely approximates the usual EMS response to out-of-hospital cardiac arrest and will help standardize delivery of the psychomotor examination. If any candidate insists on moving the manikin to a location other than the floor, you should immediately request assistance from the State EMS Official or approved agent.

Equipment List

This skill should be located in a quiet, isolated room with a desk or table and two comfortable chairs. ***The manikin must be placed and left on the floor for this skill. Live shocks must be delivered if possible.*** If the monitor/defibrillator does not sense appropriate transthoracic resistance and will not deliver a shock, the Skill Examiner must operate the equipment to simulate actual delivery of a shock as best as possible. The following equipment must also be available and you must ensure that it is working adequately throughout the examination:

- Examination gloves
- Automated External Defibrillator (trainer model programmed with current AHA Guidelines) with freshly charged batteries and spares
- CPR manikin that can be defibrillated with an AED Trainer
- Appropriate disinfecting agent and related supplies

INSTRUCTIONS TO THE PRACTICAL SKILLS CANDIDATE FOR

CARDIAC ARREST MANAGEMENT/AED

This skill is designed to evaluate your ability to manage an out-of-hospital cardiac arrest by integrating patient assessment/management skills, CPR skills, and usage of an AED. You arrive on scene by yourself and there are no bystanders present. You must begin resuscitation of the patient in accordance with current American Heart Association Guidelines for CPR. You must physically perform hands only CPR and operate the AED, including delivery of any shock. The patient's response is not meant to give any indication whatsoever as to your performance in this skill. Please take a few moments to familiarize yourself with the equipment before we begin and I will be happy to explain any of the specific operational features of the AED. If you brought your own AED, I need to make sure it is approved for testing before we begin.

[After an appropriate time period or when the candidate informs you he/she is familiar with the equipment, the Skill Examiner continues reading the following:]

You will have fifteen (15) minutes to complete this skill once we begin. I may ask questions for clarification and will acknowledge the treatments you indicate are necessary. Do you have any questions?

You respond to a call and find this patient lying on the floor. There are no bystanders present.

Spinal Immobilization (Supine Patient) and other Random EMT Skills Essay to Skill Examiners

Essays and instructions for five (5) EMT skills are included in this essay. NREMT candidates must test the skills as follows:

LEVEL	SKILLS TO TEST
Nationally Registered Emergency Medical Technician	<p>Additionally, all NREMT candidates must also be randomly tested on the following skills:</p> <ul style="list-style-type: none"> ▪ <i>Spinal Immobilization (Supine Patient) – will not be evaluated during COVID-19 as it cannot be performed safely.</i> ▪ <i>Spinal Immobilization (Seated Patient) – will not be evaluated during COVID-19 as it cannot be performed safely.</i> ▪ Bleeding Control/Shock Management ▪ Long Bone Immobilization ▪ Joint Immobilization

Candidates retesting any skill(s) must retest over the specific skill(s) previously failed. Should any candidate dispute any skill that you direct him/her to complete, please contact the State EMS Official or approved agent immediately for clarification. Do not let the candidate leave the room until the matter is resolved with the State EMS Official or approved agent. The essays that follow are:

1. *Spinal Immobilization (Supine Patient) - will not be evaluated during COVID-19 as it cannot be done safely*
2. *Spinal Immobilization (Seated Patient) – will not be evaluated during COVID-19 as it cannot be done safely*
3. Bleeding Control/Shock Management
4. Long Bone Immobilization
5. Joint Immobilization

Thank you for serving as a Skill Examiner at today's examination. Before you read the specific essay(s) for the skill(s) you will be evaluating today, please take a few moments to review your general responsibilities as a Skill Examiner:

- Conducting examination-related activities on an equal basis for all candidates, paying particular attention to eliminate actual or perceived discrimination based upon race, color, national origin, religion, gender, age, disability, position within the local EMS system, or any other potentially discriminatory factor.
- Objectively observing and recording each candidate's performance
- Acting in a professional, unbiased, non-discriminating manner, being cautious to avoid any perceived harassment of any candidate
- Providing consistent and specific instructions to each candidate by reading the "Instructions to the

Psychomotor Skills Candidate” exactly as printed in the material provided by the National Registry. Skill Examiners must limit conversation with candidates to communication of instructions and answering of questions. All Skill Examiners must avoid social conversation with candidates or making comments on a candidate’s performance.

- Recording, totaling, and documenting all performances as required on all skill evaluation forms
- Thoroughly reading the specific essay for the assigned skill before actual evaluation begins
- Checking all equipment, props, and moulage prior to and during the examination
- Preparing the low fidelity manikin for the assigned skill
- Assuring professional conduct of all personnel involved with the particular skill throughout the examination
- Maintaining the security of all issued examination material during the examination and ensuring the return of all material to the State EMS Official or approved agent

Spinal Immobilization (Supine Patient) Essay to Skill Examiners **During COVID 19 this will not be evaluated**

This skill is designed to evaluate the candidate’s ability to immediately protect and immobilize the Simulated Patient’s spine by using a rigid long spinal immobilization device. The candidate will be advised that the scene survey and primary survey have been completed and no condition requiring further resuscitation efforts or urgent transportation is present. The Simulated Patient will present lying on his/her back, arms straight down at his/her side, and feet together. Candidates should not have to be concerned with distracters such as limb realignment, prone or other unusual positions. The presenting position of the Simulated Patient must be identical for all candidates.

The candidate will be required to treat the specific, isolated problem of a suspected unstable spine. Primary and secondary assessments of airway, breathing, and central circulation are not required in this skill. The candidate will be required to check motor, sensory, and circulatory function in each extremity at the proper times throughout this skill. If a candidate fails to check any of these functions in any extremity, a zero must be awarded for this step in the “Points Awarded” column.

There are various long spine immobilization devices utilized in the EMS community. The evaluation form was designed to be generic so it could be used to evaluate the candidate regardless of the immobilization device used. You should have various long spine immobilization devices available for this skill, specifically long spine immobilization devices used in the local EMS system, long spine board, and a scoop stretcher. The candidate may choose to bring a device with which he/she is familiar. The State EMS Official or approved agent must approve this device and you must be familiar with its proper use before evaluation of the candidate begins. Do not indicate displeasure with the candidate's choice of equipment. Be sure to evaluate the candidate on how well he/she immobilizes and protects the Simulated Patient's spine, not on what immobilization device is used.

The candidate must, with the help of an EMT Assistant and the Skill Examiner, move the Simulated Patient from the ground onto the long spinal immobilization device. There are various acceptable ways to move a patient from the ground onto a long spinal immobilization device (i.e. logroll, straddle slide, etc.). You should not advocate one method over the others. All methods should be considered acceptable as long as spinal integrity is not compromised. Regardless of the method used, the EMT Assistant should control the head and cervical spine while the candidate and evaluator move the Simulated Patient upon direction of the candidate.

Immobilization of the lower spine/pelvis in line with the torso is required. Lateral movement of the legs will cause angulation of the lower spine and should be avoided. Additionally, tilting the backboard when the pelvis and upper legs are not secured will ultimately cause movement of the legs and angulation of the spine.

This skill requires that an assistant EMT be present during the evaluation. Candidates are to be evaluated individually with the assisting EMT providing manual stabilization and immobilization of the head and cervical spine. The assisting EMT should be told not to speak, but to follow the commands of the candidate. The candidate is responsible for the conduct of the assisting EMT. If the assisting EMT is instructed to provide improper care, areas on the score sheet relating to that care should be deducted. At no time should you allow the candidate or assisting EMT to perform a procedure that would actually injure the Simulated Patient.

This skill requires the presence of a live Simulated Patient. The Simulated Patient must be an adult or adolescent who is at least sixteen (16) years of age. The Simulated Patient must also be of average adult height and weight. The use of very small children as Simulated Patients is not permitted in this skill. The Simulated Patient should be briefed on his/her role in this skill. You may use comments from the Simulated Patient about spinal movement in the scoring process as long as he/she is certified at the level of EMT or higher.

Equipment List

Do not open this skill for testing until you have one (1) EMT Assistant and one (1) Simulated Patient who is an adult or adolescent at least sixteen (16) years of age. The Simulated Patient must also be of average adult height and weight. The following equipment must be available and you must ensure that it is working adequately throughout the examination:

- Examination gloves
- Long spine immobilization device (long board, etc.)
- Head immobilizer (commercial or improvised)
- Cervical collar (appropriate size)
- Patient securing straps (6-8 with compatible buckles/fasteners)
- Blankets
- Padding (towels, cloths, etc.)
- Tape

Spinal Immobilization (Seated Patient) Essay to Skill Examiners **During COVID 19 will not be used**

This skill is designed to evaluate a candidate's ability to provide spinal immobilization to a seated patient in whom spinal instability is suspected. Each candidate will be required to appropriately apply any acceptable half-spine immobilization device on a seated patient and verbalize movement of the Simulated Patient to a long backboard.

The candidate is evaluated on his/her ability to protect and provide immediate immobilization of the spine. The candidate will be advised that the scene survey and primary survey have been completed and no condition requiring further resuscitation efforts or urgent transportation is present. A live Simulated Patient who is an adult or adolescent who is at least sixteen (16) years of age is required in this skill. The Simulated Patient must be of average adult height and weight. The use of very small children as Simulated Patients is not permitted in this skill. The Simulated Patient will present seated in an armless chair, sitting upright with his/her back loosely touching the back of the chair. The Simulated Patient will not present slumped forward or with the head held in any grossly abnormal position. The position of the Simulated Patient must be identical for all candidates.

The primary survey as well as reassessment of the Simulated Patient's airway, breathing, and central circulation are not required in this skill. The candidate will be required to check motor, sensory, and circulatory functions in each extremity at the proper times throughout this skill. Once the candidate has immobilized the seated patient, simply ask him/her to verbally explain all key steps he/she would complete while moving the Simulated Patient to the long backboard. The candidate may check motor, sensory, and circulatory functions at anytime during the procedure without a loss of points. However, if he/she fails to check motor, sensory, or circulatory function in all extremities after verbalizing immobilization to a long backboard, a zero should be placed in the "Points Awarded" column for this step. The related "Critical Criteria" statement would also need to be checked and documented as required.

You should have various half-spine immobilization devices collected in the testing room that represent those devices utilized in the local EMS system (KED, XP-1, OSS, half spine board, Kansas board, etc.) or other accepted devices. It is required that at least one (1) rigid wooden or plastic half-spine board and one (1) commercial vest-type immobilization device with all other associated immobilization equipment provided by the manufacturer be available in this room. You are responsible to check that all equipment listed is present and in proper working order (not too frayed or worn, all buckles and straps are present, etc.). The candidate may choose to bring a device with which he/she is familiar and the **State EMS Official or approved agent** must approve these devices. You must also be familiar with the proper use of these devices before any evaluation of the candidate can occur. Be sure to give the candidate time to survey and check the equipment before any evaluation begins. You must not indicate any displeasure with the candidate's choice of any immobilization device.

The skill evaluation instrument was designed to be generic so it could be utilized to evaluate the candidate's performance regardless of the half-spine immobilization device utilized. All manufacturers' instructions describe varying orders in which straps and buckles are to be applied when securing the torso for various commercial half-spine immobilization devices. This skill is not designed to specifically evaluate each individual device but to "generically" verify a candidate's competence in safely and adequately securing a suspected unstable cervical spine in a seated patient. **Therefore, while the specific order of placing and securing straps and buckles is not critical, it is imperative that the patient's head be secured to the half-spine immobilization device only after the device has been secured to the torso.** This sequential order most defensibly minimizes potential cervical spine compromise and is the most widely accepted and defended order of application to date regardless of the device. Placement of an appropriate cervical collar is also required with any type of half-spine immobilization device. Given the chosen device, your careful observation of the candidate's technique and a reasonable standard of judgment should guide you when determining if the device was appropriately secured to the torso before the head was placed in the device. You must also apply the same reasonable standard of judgment when checking to see if the device was applied too loosely or not appropriately fastened to the Simulated Patient.

A trained EMT Assistant will be present in the skill to assist the candidate by applying manual in-line immobilization of the head and cervical spine only upon the candidate's commands. The assistant must be briefed to follow only the commands of the candidate, as the candidate is responsible for the actions that he/she directs the assistant to perform. When directed, the assistant must maintain manual in-line immobilization as a trained EMT Assistant would in the field. No unnecessary movement of the Simulated Patient's head or other "games" will be tolerated or are meant to be a part of this examination. However, if the assistant is directed to provide improper care, points on the evaluation form relating to this improper care should be deducted and documented. For example, if the candidate directs the assistant to let go of the head prior to its mechanical immobilization, the candidate has failed to maintain manual, neutral, in-line immobilization. You must check the related statement under "Critical Criteria" and document your rationale. On the other hand, if the assistant accidentally releases immobilization without an order, you should direct the assistant to again take manual in-

line immobilization. Immediately inform the candidate that this action will not affect his/her evaluation. At no time should you allow the candidate or assistant EMT to perform a procedure that would actually injure the Simulated Patient. The candidate should also verbally describe how he/she would move and secure the Simulated Patient to the long backboard.

The Simulated Patient should be briefed on his/her role in this skill and act as a calm patient would if this were a real situation. You may question the Simulated Patient about spinal movement and overall care in assisting with the evaluation process after the candidate completes his/her performance and exits the room.

Equipment List

Do not open this skill for testing until you have one (1) Simulated Patient who is an adult or adolescent at least sixteen (16) years of age. The Simulated Patient must also be of average adult height and weight. One (1) assistant EMT is also required in this skill. The following equipment must be available and you must ensure that it is working adequately throughout the examination:

- Examination gloves
- Half-spine immobilization device* (wooden or plastic)
- Vest-type immobilization device*
- Padding material (pads or towels)
- Armless chair
- Cervical collars (correct sizes)
- Cravats (6)
- Kling, Kerlex, etc.
- Long immobilization straps (6 of any type)
- Tape (2" or 3" adhesive)
- Blankets (2)

* It is required that the skill include one (1) plain wooden or plastic half board with tape, straps, blankets, and cravats as well as one (1) common vest-type device (complete). Additional styles and brands of devices and equipment may be included as a local option.

Bleeding Control/Shock Management Essay to Skill Examiners

This skill is designed to evaluate the candidate's ability to treat a life-threatening arterial hemorrhage from an extremity and subsequent hypoperfusion. This skill will be scenario-based and will require some dialogue between you and the candidate. The candidate will be required to properly treat a life-threatening arterial hemorrhage from an extremity in accordance with recommendations by the American College of Surgeons.

This skill requires a synthetic IV arm or equivalent. IV Arm will present with an arterial bleed from a severe laceration of the extremity. Simple moulage may enhance the visual cue for the location of the wound but is not required in this skill. You will direct the actions of the candidate at predetermined intervals as indicated on the evaluation form. The candidate will be required to provide the appropriate intervention at each interval as the simulated patient's condition changes. With the exception of the actual application of direct pressure and a tourniquet, this will be accomplished by the instructor providing information about the patients' condition and the candidate providing verbal guidance regarding the additional steps they would take to treat the patient. It is essential, due to the purpose of this skill that the Simulated Patient's condition

does not deteriorate to a point where CPR would be initiated. This skill is not designed to evaluate CPR skills.

The scenario provided in this essay is an example of an acceptable scenario for this skill. It is not intended to be the only possible scenario for this skill. Variations of the scenario are possible and should be utilized in order to reduce the possibility of candidates knowing the scenario before entering this skill. If the scenario is changed for the examination, the following guidelines must be used:

- An isolated laceration to an extremity producing an arterial bleed must be present.
- The scene must be safe.
- As the scenario continues, the skills examiner must present signs and symptoms of hypoperfusion.

Due to the scenario format of this skill, you are required to supply information to the candidate at various times during the exam. When the candidate initially applies direct pressure to the wound, you should inform the candidate that the wound continues to bleed. If the candidate applies a pressure dressing and bandage, you should inform the candidate that the wound continues to bleed. In accordance with recommendations by the American College of Surgeons, application of a tourniquet proximal to the injury is the reasonable next step if hemorrhage cannot be controlled with pressure. If the candidate delays applying a tourniquet and applies additional dressings over the first, you should again inform him/her that the wound continues to bleed. If the candidate attempts to elevate the extremity or apply pressure to the related arterial pressure point, you should inform the candidate that the wound continues to bleed. There is no published evidence that supports controlling arterial hemorrhage from an extremity with elevation or pressure to an arterial pressure point. If the candidate delays application of the tourniquet, you should check the related “Critical Criteria” statement and document his/her delay in treating the hemorrhage in a timely manner as required on the skill evaluation form. After the candidate properly applies an arterial tourniquet, you should inform him/her that the bleeding is controlled. Once the bleeding is controlled in a timely manner, you should provide signs and symptoms of hypoperfusion (restlessness; cool, clammy skin; BP 110/80, P 118, R 30). *(Note: The tourniquet is never to be tightened on a programmed patient. Final application of the tourniquet is to be performed on the IV arm – Maine addition).*

Equipment List

Do not open this skill for testing until you have a low fidelity manikin or IV arm and all of the equipment listed below. The following equipment must be available and which you must ensure is working adequately throughout the examination:

- Examination gloves
- Field dressings (various sizes)
- Bandages (various sizes)
- Tourniquet (commercial or improvised)
- IV arm or low fidelity manikin (*Maine addition*)
- Oxygen cylinder with delivery system (tank may be empty)
- Oxygen delivery devices (nasal cannula, simple face mask, non-rebreather mask)
- Blanket
- Gauze pads (2x2, 4x4, etc.)
- Kling, Kerlex, etc.

Long Bone Immobilization Essay to Skill Examiners

This skill is designed to evaluate a candidate's ability to immobilize a suspected long bone fracture properly using a rigid splint. The candidate will be advised that a primary survey has been completed on the victim and that a suspected long bone fracture was discovered during the secondary survey. The simulated patient low fidelity manikin will present with a non-angulated, closed, suspected long bone fracture of the lower extremity, specifically a suspected fracture of the tibia or fibula.

The candidate will then be required to treat the specific, isolated injury. The primary survey as well as reassessment of the patient's airway, breathing, and central circulation are not required in this skill. The candidate will be required to check motor, sensory, and circulatory functions in the injured extremity prior to splint application and after completing the splinting process. Additionally, the use of traction splints are **not** permitted and should not be available for use.

The candidate is required to "Secure the entire injured extremity" after the splint has been applied. There are various methods of accomplishing this particular task. Long bone fractures of the lower extremity may be secured by placing the victim properly on a long backboard or applying a rigid long board splint between the victim's legs and then securing the legs together. Any of these methods should be considered acceptable and points should be awarded accordingly.

When splinting the lower extremity, the candidate is required to immobilize the foot in a position of function. Two positions that are to be avoided are gross plantar flexion or extreme dorsiflexion. No points should be awarded if these positions are used.

Social Distancing Protocol: No live assistant or simulated patient will be used for this station. The evaluator may be used to lift or move the extremity. Candidates will verbally explain the directions they would normally provide their assistants to perform. It should be assumed that all directions are performed correctly.

Equipment List

Do not open this skill for testing until you have a manikin with two (2) full legs that have knees and ankles. The following equipment must be available and you must ensure that it is working adequately throughout the examination:

- Examination gloves
- Rigid splint materials (various sizes)
- Roller gauze
- Cravats (6)
- Tape

Joint Immobilization Essay to Skill Examiners

This skill is designed to evaluate a candidate's ability to immobilize a suspected wrist injury using rigid splint. The candidate will be advised that a primary survey has been completed on the victim and that a suspected wrist injury is discovered during the secondary survey. The simulated patient will be a low fidelity manikin of IV arm and will present with arm and hand positioned at the side palm down.

The candidate will then be required to treat the specific, isolated injury. The primary survey as well as reassessment of the patient's airway, breathing, and central circulation are not required in this skill. The candidate will be required to check motor, sensory, and circulatory functions in the injured extremity prior to splint application and after completing the splinting process.

Social Distancing Protocol: No live assistant or simulated patient will be used for this station. The evaluator may be used to lift or move the extremity. Candidates will verbally explain the directions they would normally provide their assistants to perform. It should be assumed that all directions are performed correctly.

Equipment List

Do not open this skill for testing until you have a low fidelity manikin with one (1) arm. The following equipment must be available, and you must ensure that it is working adequately throughout the examination:

- Examination gloves
- Rigid splint materials (various sizes)
- Roller gauze
- Cravats (6)
- Tape

**INSTRUCTIONS TO THE PSYCHOMOTOR SKILLS CANDIDATE FOR
SPINAL IMMOBILIZATION (SUPINE PATIENT) during COVID-19
will not be used**

This skill is designed to evaluate your ability to provide spinal immobilization to a supine patient using a long spine immobilization device. You arrive on the scene with an EMT Assistant. The assistant EMT has completed the scene survey as well as the primary assessment and no critical condition requiring any intervention was found. For the purposes of this evaluation, the Simulated Patient's vital signs remain stable. You are required to treat the specific, isolated problem of a suspected unstable spine using a long spine immobilization device. When moving the Simulated Patient to the device, you should use the help of the assistant EMT and me. The assistant EMT should control the head and cervical spine of the Simulated Patient while you and I move the Simulated Patient to the immobilization device. You are responsible for the direction and subsequent actions of the EMT Assistant and me. You may use any equipment available in this room. You have ten (10) minutes to complete this procedure. Do you have any questions?

**INSTRUCTIONS TO THE PSYCHOMOTOR SKILLS CANDIDATE FOR
SPINAL IMMOBILIZATION (SEATED PATIENT) during
COVID-19 will not be used**

This skill is designed to evaluate your ability to provide spinal immobilization to a sitting patient using a half-spine immobilization device. You arrive on the scene of an auto crash with an EMT Assistant. The scene is safe and there is only one (1) patient. The assistant EMT has completed the scene survey as well as the primary assessment and no critical condition requiring any intervention was found. For the purposes of this evaluation, the Simulated Patient's vital signs remain stable. You are required to treat the specific, isolated problem of a suspected unstable spine using a half-spine immobilization device. You are responsible for the direction and subsequent actions of the EMT Assistant. Transferring and immobilizing the Simulated Patient to the long backboard should be described verbally. You have ten (10) minutes to complete this skill. Do you

INSTRUCTIONS TO THE PSYCHOMOTOR SKILLS CANDIDATE FOR BLEEDING CONTROL/SHOCK MANAGEMENT

This skill is designed to evaluate your ability to control hemorrhage. This is a scenario-based evaluation. As you progress through the scenario, you will be given various signs and symptoms appropriate for the Simulated Patient's condition. You will be required to manage the Simulated Patient based on these signs and symptoms. You may use any of the supplies and equipment available in this room. You have fifteen (15) minutes to complete this skill. Please take a few moments and familiarize yourself with this equipment before we begin. Do you have any questions?

[Sample Scenario:]

You respond to a stabbing and find a 25 year old (male/female) patient. Upon examination, you find a two (2) inch stab wound to the inside of the right arm at the antecubital fossa. Bright red blood is spurting from the wound. The scene is safe and the patient is responsive and alert. (His/Her) airway is open and (he/she) is breathing adequately. Do you have any questions?

INSTRUCTIONS TO THE PSYCHOMOTOR SKILLS CANDIDATE FOR LONG BONE IMMOBILIZATION

This skill is designed to evaluate your ability to properly immobilize a closed, non-angulated suspected long bone fracture. You are required to treat only the specific, isolated injury. The scene survey and primary survey have been completed and a suspected, closed, non-angulated fracture of the_ (tibia, or fibula) is discovered during the secondary survey. Continued assessment of the patient's airway, breathing, and central circulation is not necessary in this skill. You may use any equipment available in this room. You have fifteen (15) minutes to complete this. Do you have any questions?

INSTRUCTIONS TO THE PSYCHOMOTOR SKILLS CANDIDATE FOR JOINT IMMOBILIZATION

This skill is designed to evaluate your ability to properly immobilize an uncomplicated wrist injury. You are required to treat only the specific, isolated injury to the wrist. The scene survey and primary survey have been completed and a suspected injury to the left or right wrist is discovered during the secondary survey. Continued assessment of the patient's airway, breathing, and central circulation is not necessary. You may use any equipment available in this room. You have fifteen (15) minutes to complete this skill. Do you have any question?

Equipment List

Patient Assessment/Management – Trauma

- Examination gloves
- Moulage kit or similar substitute
- Outer garments to be cutaway
- Penlight
- Blood pressure cuff
- Stethoscope
- Scissors
- Blanket
- Tape (for outer garments)
- A low fidelity manikin that can properly simulate an adult or adolescent at least sixteen (16) years of age.

Patient Assessment/Management – Medical

- Examination gloves
- Moulage kit or similar substitute
- Outer garments to be cutaway
- Watch with second hand
- Penlight
- Blood pressure cuff
- Stethoscope
- Scissors
- Blanket
- Tape (for outer garments)
- A low fidelity manikin that can properly simulate an adult or adolescent at least sixteen (16) years of age.

Bag-Valve-Mask Ventilation of an Apneic Adult Patient

- Examination gloves (may also add masks, gowns, and eyewear)
- Intubation manikin (adult)
- Bag-valve-mask device with reservoir (adult)
- Oxygen cylinder with regulator:
 - One oxygen cylinder must be fully pressurized with air or oxygen in order to test oxygen administration by non-rebreather mask. A second empty oxygen cylinder may be used to test BVM ventilation of an apneic adult patient.
- Oxygen connecting tubing
- Selection of oropharyngeal airways (adult)
- Selection of nasopharyngeal airways (adult)
- Suction device (electric or manual) with rigid catheter and appropriate suction tubing
 - Various supplemental oxygen delivery devices (nasal cannula, non-rebreather mask with reservoir, etc. for an adult)
- Stethoscope
- Tongue blade

Oxygen Administration by Non- rebreather Mask

- Examination gloves (may also add masks, gowns, and eyewear)
- Intubation manikin (adult)
- Various supplemental oxygen delivery devices (nasal cannula, non-rebreather mask with reservoir, etc. for an adult)
- Oxygen cylinder with regulator and wrench
- One oxygen cylinder must be fully pressurized with air or oxygen in order to test oxygen administration by non-rebreather mask.

Cardiac Arrest Management/AED

This skill should be located in a quiet, isolated room with a desk or table and two comfortable chairs. **The manikin must be placed and left on the floor for this skill. Live shocks must be delivered if possible.** If the monitor/defibrillator does not sense appropriate transthoracic resistance and will not deliver a shock, the Skill Examiner must operate the equipment to simulate actual delivery of a shock as best as possible. The following equipment must also be available and you must ensure that it is working adequately throughout the examination:

- Examination gloves
- Automated External Defibrillator (trainer model programmed with current AHA Guidelines) with freshly charged batteries and spares
- CPR manikin that can be defibrillated with an AED Trainer
- Appropriate disinfecting agent and related supplies

Spinal Immobilization (Supine Patient) – this station will not be included in evaluation during COVID-19 as it cannot be done safely.

- Examination gloves
- Long spine immobilization device (longboard, etc.)
- Head immobilizer (commercial or improvised)
- Cervical collar (appropriate size)
- Patient securing straps (6-8 with compatible buckles/fasteners)
- Blankets
- Padding (towels, cloths, etc.)
- Tape

Spinal Immobilization (Seated Patient) this station will not be included in evaluation during COVID-19 as it cannot be done safely.

- Examination gloves
- Half-spine immobilization device* (wooden or plastic)
- Vest-type immobilization device*
- Padding material (pads or towels)
- Armless chair
- Cervical collars (correct sizes)
- Cravats (6)
- Kling, Kerlex, etc.
- Long immobilization straps (6 of any type)
- Tape (2" or 3" adhesive)
- Blankets (2)

*It is required that the skill include one (1) plain wooden or plastic half board with tape, straps, blankets, and cravats as well as one (1) common vest-type device (complete). Additional styles and brands of devices and equipment may be included as a local option.

Bleeding Control/Shock Management

- Examination gloves
- Field dressings (various sizes)
- Bandages (various sizes)
- IV Arm (*Maine Addition*)
- Tourniquet (commercial or improvised)
- Oxygen cylinder with delivery system (tank may be empty)
- Oxygen delivery devices (nasal cannula, simple face mask, non-rebreather mask)
- Blanket
- Gauze pads (2x2, 4x4, etc.)

- Kling, Kerlex, etc.

Long Bone Immobilization – during COVID-19 lower leg will be the long bone used for immobilization

- Low fidelity manikin with leg including with a knee, ankle and foot
- Examination gloves
- Rigid splint materials (various sizes)
- Roller gauze
- Cravats (6)
- Tape

Joint Immobilization – during COVID-19 wrist will be the joint immobilized

- IV arm or similar manikin arm with wrist and fingers.
- Examination gloves
- Cravats (6) to be used as a sling and swathe
- Rigid splint materials (various sizes)
- Roller gauze
- Tape
-

Appendix E:
EMT Psychomotor Examination Report Form

CANDIDATE'S STATEMENT

By my signature, I affirm that I was oriented to the psychomotor examination by the State EMS Official or the approved agent. I agree to fully abide by all policies of the State EMS Office and the National Registry of Emergency Medical Technicians. I understand that they reserve the right to delay processing or invalidate my results if I have not complied with all rules. I also understand that my attendance at today's examination does not guarantee my eligibility for certification by the National Registry of EMTs or subsequent state licensure.

I affirm that the psychomotor examination complaint process has been explained to me. I understand that I must contact the State EMS Official or approved agent immediately if I feel I have been discriminated against or experienced any type of equipment malfunction in any skill. I further understand that my complaints **will not be accepted** if I do not file my complaints today before leaving this site and before I am informed of my psychomotor examination results. I understand that the National Registry of EMTs will not explain any specific errors in my performance. All examination results are preliminary and unofficial until they have been formally processed and reported by the State EMS Official or approved agent.

I hereby affirm and declare that all information entered on this form is truthful, correct, and matches my true identity which coincides with my entry on the official roster for this examination. I am assuming all responsibility for completing all appropriate skill(s) based upon the policies and procedures of the State EMS Office and the National Registry of EMTs in conjunction with all of my previously reported official psychomotor examination results. I also understand that making threats toward the State EMS Official, agent, or any examination staff; the use of unprofessional (foul) language; or committing other types of irregular behavior may be sufficient cause to invalidate the results of the examination, to terminate participation in an ongoing examination, to withhold or revoke scores or certification, or to take other appropriate action. If my name was not read as part of the official roster for today's examination, I am also assuming all risks and consequences of possibly testing inappropriate skills today.

Appendix F:

Recommended Pass/Fail Criteria

RECOMMENDED PASS/FAIL CRITERIA FOR NREMT PSYCHOMOTOR EXAMINATION

MINIMUM POINTS REQUIRED

PATIENT ASSESSMENT – TRAUMA	33 points
PATIENT ASSESSMENT – MEDICAL	33 points
BAG-VALVE-MASK VENTILATION OF AN APNEIC ADULT PATIENT.....	13 points
OXYGEN ADMINISTRATION BY NON-REBREATHER MASK	8 points
CARDIAC ARREST MANAGEMENT/AED.....	14 points
SPINAL IMMOBILIZATION (SUPINE PATIENT)	11 points
RANDOM EMT SKILLS	
SPINAL IMMOBILIZATION (SEATED PATIENT).....	9 points
BLEEDING CONTROL/SHOCK MANAGEMENT.....	5 points
LONE BONE IMMOBILIZATION	8 points
JOINT IMMOBILIZATION	7 points

NOTE: Failure must be noted for any skill where minimum points were not realized. In addition, failure must be noted for any skill where the examiner has checked one of the "Critical Criteria" statements and documented the performance as required
