

## MEMORANDUM

**To:** EMS Board

**From:** Maine EMS Office

**Date:** September 24, 2025

**Subject:** Enabling HealthInfoNet (HIN) for Community Health Module Reports

---

HealthInfoNet (HIN) has completed its review of Maine EMS's request to share Community Paramedicine (CP) data through the Health Information Exchange. Under the current agreement, only 911 reports are authorized for transmission and access.

**Opportunity:**

HIN is able to include Community Paramedicine reports in the exchange. This expansion would allow healthcare providers across the state to access timely and relevant CP documentation to support care coordination and patient outcomes.

**Next Steps Required:**

Before amending the agreement HIN requires the following:

1. **Formal confirmation** from:
  - The **Medical Direction and Practices Board (MDPB)**, which occurred at their September 17<sup>th</sup> meeting.
  - The **Maine EMS Board**
2. **Amendment to the existing agreement** between Maine EMS and HIN to include CP reports.

**Recommendation:**

The office recommends enabling the inclusion of Community Paramedicine data in the HealthInfoNet system. Doing so will ensure continuity of care, improve data integration across healthcare settings, and support the evolving role of community paramedicine clinician's across Maine's healthcare landscape.
