# Licensing Information

## TRAPPING LICENSE REQUIREMENTS

Except for certain landowners, full-time Department employees engaged in official duties, and children under 10, everyone, including animal damage control agents and animal control officers appointed pursuant to Title 7, must have the appropriate trapping license before setting a trap for wild animals or before assisting another person who is trapping. An unlicensed person may accompany a trapper only as an observer.

A person buying a trapping license for the first time must purchase it through the MDIFW office in Augusta, in person or via mail. Trapping license renewals including bear permits can be purchased online. Visit [mefishwildlife.com](http://mefishwildlife.com) for more information.

A trapping license remains valid from July 1st through June 30th of the following year.

- Maine residents under 10 years old may trap without a license, except bear. An individual must be at least 10 years of age to trap a black bear.
- Maine residents and nonresidents who are at least 10, but less than 16 years old, must have a junior trapping license.

**Note:** A junior trapping license issued to a 15 year old is good for the entire calendar year regardless of when the person turns 16.

- Maine residents who are 16 or older, must have a resident trapping license (see resident landowner below).
- Resident landowners and immediate family members may trap without a license on their own land as long as their license to trap is not under revocation or suspension, IF they currently live on that land AND the land is used only for agricultural purposes.
- **Nonresidents:** Nonresident trappers 16 years of age and older must have a non-resident trapping license. Nonresidents 10 to 15 years of age must have a junior trapping license and those under 10 years of age may trap without a trapping license.

**Note:** Nonresidents who are citizens of the U.S. are not allowed to trap beaver unless their home state allows Maine residents to trap beaver. A nonresident who isn't a citizen of the U.S. cannot trap in Maine unless it is for beaver AND their province of residency allows Maine residents to trap beaver in that province.

## Apprentice Trapper License

An apprentice trapper license allows a person who has never held a valid adult trapping license to go trapping with an apprentice trapper supervisor for up to two years without having to take a trapper education course. An "apprentice trapper supervisor" is one who has held a valid adult trapping license for the prior 3 consecutive years. The holder of an apprentice trapper license must, while trapping, be under the direct supervision of an apprentice trapper supervisor at all times. An apprenticeship trapper license allows a person to trap for all species that may be legally trapped, except black bear. The fee for an apprentice trapper license is the same as a regular trapping license.

## TRAPPER EDUCATION COURSE

When applying for any Maine trapping license (except a junior or apprentice trapping license), proof of having successfully completed a state-approved trapper education course is required OR proof of having held an adult trapping license (in Maine or in some other state, province or country) at some time since 1978. **See page 15 for new bear trapping exceptions.**

## PURCHASE YOUR TRAPPING LICENSE ONLINE (NEW)

Trapping license renewals, including Apprenticeship Trapping, Bear Trapping Permit, and Junior Trapping License can be purchased online.

## HARVEST REPORTS

Trappers that are 16 years old and older, including Lifetime License holders, are required to complete a Fall and Spring Harvest Report, even if you did not trap. These reports are mailed to all trappers each fall and can be completed online. These reports provide important data for all furbearers on trapper effort trends. For more information, visit our website: [mefishwildlife.com/trappinglaws](http://mefishwildlife.com/trappinglaws). ■

## ATTENTION LIFETIME TRAPPING LICENSE HOLDERS

The Department mails trapping information to all trappers each fall. Please contact the Department at (207) 287-8000 if your contact information has changed or you no longer plan to trap.

## DEFINITIONS

**RESIDENT** means a citizen of the United States or a person who is not a citizen of the United States who has been domiciled in the State for one year who:

- if registered to vote, is registered in this State;
- if licensed to drive a motor vehicle, has made application for or possesses a motor vehicle operator's license issued by the State;
- has registered in Maine any motor vehicles they own that are located within the state;
- is in compliance with the state income tax laws;
- is a full-time student at a Maine college or university who satisfies above requirements.

**NONRESIDENT** means a person who does not fall within the definition of a resident.

TRAPPING LICENSES & FEES		
RESIDENCY	LICENSE/PERMIT	FEE
Maine Residents	Trapping (16 and older)	\$36.00
	Apprentice Trapping (16 and older)	\$36.00
	Bear Trapping Permit (10 and older) <sup>1</sup>	\$10.00
Non-Residents	Trapping (16 and older)	\$318.00
	Apprentice Trapping (16 and older)	\$318.00
	Bear Trapping Permit (10 and older) <sup>1</sup>	\$67.00
Juniors (Resident & Nonresident)	Junior Trapping (10- 15 years)	\$10.00

<sup>1</sup>Trapping license or big game hunting license also required, see page 15.

**TRAPPING BY YOUTH**

Children under 10 years of age are allowed to trap all legal species without a license but must be accompanied at all times by a junior trapper supervisor.

**Exception:** Children under 10 years of age may not trap black bear, see page 15 for bear trap permit requirements.

Children over 10 years of age and under 16 years of age who hold a junior trapping license must be accompanied by a junior trapper supervisor unless they have successfully completed a trapper education course. The person who accompanies a youth trapper is responsible for any violations committed by this trapper.

“Junior Trapper Supervisor” for a junior trapper means a parent or guardian of the junior trapper or a person 18 years of age or older who is approved by the parent or guardian of the junior trapper and who holds or has held a valid adult trapping license or has completed a trapper education course. ■

**MAINE LIFETIME LICENSE**

***A Maine Tradition and a Gift that Lasts a Lifetime***

A lifetime license, purchased for yourself or as a gift, allows the bearer to fish, trap, and/or hunt for their lifetime, regardless of where they live in the future. Revenues generated by these licenses are deposited in a special trust fund that provides longterm financial support for Maine’s fish and wildlife.

Lifetime license holders (not complimentary) are required to purchase any additional hunting/fishing permits between the ages of 16 and 69.

***Maine Resident Applicants 70+ Years of Age***

For a one-time fee of \$8.00, a senior lifetime license entitles the holder to all privileges they are qualified to receive including hunting, trapping, archery, and fishing. The resident lifetime trapping license holder (70 years of age and older) must obtain the bear trapping permit free of charge, by calling MDIFW at 207-287-8000.

**Note:** If you purchased a senior lifetime license before age 70, you do NOT have to pay the \$8.00 fee.

**OTHER COMPLIMENTARY TRAPPING LICENSES**

For information on other complimentary/special licenses call 207-287-8000.

**OUTDOOR SAFETY COURSES**

Maine law requires all firearms, archery, crossbow, or trapping license applicants to complete an outdoor safety course, unless they have previously held an adult license.

To purchase a bear trapping permit, you must complete the black bear trapping education course online or in-person, learn more at [mefishwildlife.com/bearcourse](http://mefishwildlife.com/bearcourse). Exceptions to this course requirement can be found on page 15.

Trapping courses are traditional, in-person classes. Firearms, bowhunter, and crossbow hunter safety courses are available in two different formats: online and traditional in-person classes. An in-person skills and exam session

is required for students ages 10-15 who take firearms and bowhunter safety courses online. The in-person classes are sponsored by school districts, sports clubs, civic groups, and others, and are taught statewide by volunteer instructors certified by MDIFW. Pre-registration is typically required.

To begin taking a course online or to register for an in-person course, visit [mefishwildlife.com/safetycourses](http://mefishwildlife.com/safetycourses). For information on becoming a volunteer instructor, contact your local Regional Safety Coordinator or the Recreational Safety Division Office.

Recreational Safety Division  
(207) 287-5220

# Definitions & Descriptions

**Bait:** Bait is defined as animal matter including meat, skin, bones, feathers, hair or any other solid substance that used to be part of an animal. This includes live or dead fish. Bait does not include animal droppings (scat), urine, or animals, dead or alive, held in a trap as the result of lawful trapping activity.

**Beaver Dam:** Means a dam built by a beaver to provide a pond as protection against predators and provide easy access to food during the winter. The Department, for enforcement purposes, has modified its definition of a “beaver dam”. A beaver dam does **not** include the remains of an inactive or breached beaver dam that is in disrepair and is no longer being maintained by beaver.

**Beaver House:** The term beaver house shall be interpreted to include any cavity which is capped by beaver with mud and sticks, including a cavity in the bank. Holes in the bank not capped with mud and sticks shall not be considered beaver houses.

**Built-up Portion of a Town:** The compact or built-up portion of a municipality is the territory contiguous to a way that is built up with structures situated less than 150 feet apart for a distance of at least ¼ of a mile.

**Catch Circle:** See page 7

**Drowning Set:** A drowning set is a trap that is set completely under water and

rigged in such a way as to reasonably ensure the drowning of any species of trapped furbearer that would reasonably be expected to visit the set location and be held in the type of trap used at the set.

**Note:** You are allowed to trap in shallow water where a trapped animal is not likely to drown, but traps set in this manner are not considered to be drowning sets and are not allowed within ½ mile of the built up section of a city or town. For enforcement and information purposes, all drowning sets for beaver and muskrat during January and February will be considered “under-ice drowning sets” as far as trap tending requirements are concerned.

**Muskrat Den:** A muskrat den is any cavity, which is capped by muskrats with vegetative matter including but not limited to hollow stumps and bank cavities. Holes in the bank not capped with vegetative matter shall not be considered muskrat dens.

**Trap:** A trap is any device which is made to catch or hold animals. There are many types of traps, but those which you are allowed to use to trap wild animals in Maine under the rules explained in the following pages are:

- Foothold traps (see page 6 and 7)
- Enclosed foothold traps (see page 7)
- Killer-type traps of the body-gripping variety, including spring-type traps (see page 8 and 9)
- Cage-type live traps (see page 7)

- Colony traps (see page 7)
- Cable devices (see page 7)
- Wooden-based rat traps are legal for weasel and red squirrel (see page 7)

**Trapping:** Any of the following actions are considered trapping:

- Setting one or more traps anywhere in the fields, forests or waters of the state
- Tending or visiting a trap which has been set in the fields, forests or waters of the state
- Killing an animal which is being held in a trap
- Removing an animal from a trap
- Assisting another person in doing any of these things

**Tributary:** Means a brook, stream or river flowing directly or indirectly into a lake, pond or another brook, stream or river. A lake or great pond shall not be construed to mean tributary. The tributary to a great pond shall not be considered a tributary to the outlet of that great pond.

**Visible Attractor:** Means an object hung or placed at a trap site location that serves as a visual cue to attract an animal to the trap. Visible attractor includes, but is not limited to, CD-disc, tin can cover, foil, tinsel, feathers, bones, fur, mechanical devices, or any like items. Fruits or vegetables used for muskrat trapping, urine, and animal droppings (scat) are not considered a visible attractor. Small pieces of flagging can be used to mark trap site locations. ■

2022-2023 TRAPPING SEASONS		
SEASON	AREA	DATES
Early Fox & Coyote	Statewide	October 16, 2022 - October 29, 2022
Early Muskrat	WMDs 1-6 & 9-11	October 23, 2022 - October 29, 2022
	WMDs 1-4	October 16, 2022 - April 30, 2023
	WMDs 5, 6 & 8-11	October 23, 2022 - April 30, 2023
Beaver	WMDs 7, 12-29	October 23, 2022 - April 15, 2023
	Statewide	September 1, 2022 - October 31, 2022
General Trapping (bobcat, coyote, fisher, fox, mink, muskrat <sup>1</sup> , opossum, otter, raccoon, red squirrel, marten, skunk, weasel)	Statewide	October 30, 2022 - December 31, 2022

<sup>1</sup>See page 11 for information on trapping muskrat after the general trapping season in areas where the beaver season is open.

# General Trapping Regulations

- **Trapping During Closed Season:** Except as explained in animal damage control laws, it is unlawful to trap for any species of wild bird, or any species of wild animal, which does not have an open trapping season.
- **Advance Preparation:** No person shall stake, hook, fasten or position a trap at any trap site location in the fields, forests or waters of the state prior to the opening day of the trapping season. In addition, there shall be no installation or placement of trapping implements, associated materials, or supplies or preparation of the site **in** the water or **on** the ice including the associated flowage, marsh, bog, brook, stream, river, pond, or lake prior to the beginning of the trapping season on beaver and muskrat.
- **Removing Animals from Traps:** Any animal found in a trap must be removed. If the animal is alive and it is a legal species, it may either be released or humanely dispatched. It is unlawful to keep a trapped animal alive without a permit to possess captive wildlife. Contact the Department for more information about captive wildlife.
- **Capture of Non-target Species:** Any animal caught during a closed season for that species, must be released alive immediately; **lynx and eagle** are the exception, see the following protocol. In the unlikely event that an eagle or a lynx is caught in a trap, a biologist or game warden must be notified immediately, before the animal is released. See **page 14 for what to do if you catch a lynx**. If a non-target species that cannot be lawfully possessed is found dead in the trap, it must be reported to a game warden as soon as possible and before the animal is removed from the trap. The animal must be surrendered to a game warden or biologist within 48 hours from the time it was discovered.
- **Carrying a Firearm:** Any licensed trapper is allowed to carry a firearm at any time while tending traps (including nights and Sundays) for the sole purpose of dispatching trapped animals. However, any person prohibited from possessing a firearm under the Maine Revised Statutes, Title 15, Section 393 is prohibited from carrying a firearm during the open trapping season for the purpose of dispatching animals unless they have obtained a valid permit to carry a firearm.
- **Disturbing Traps:** It is unlawful to take or disturb any trap, or any wild animal which is caught in a trap, without permission from the owner of the trap. An individual convicted of disturbing traps, will lose any license in effect, and be ineligible to purchase any license issued by the Department for 3 years.
- **Furbearer Hunting:** The use of a firearm, crossbow, or bow and arrow is permitted to hunt for bobcat, coyote, red and grey fox, opossum, raccoon, red squirrel and skunk during the open hunting season on these animals. See the *Maine Summary of Hunting Laws* for more information. It is unlawful to hunt for beaver, fisher, marten, mink, muskrat, otter, or weasel at any time.
- **Setback Distance:** Traps are required to be set at least 5 feet away from another person's beaver traps; however, as a matter of common courtesy, all traps should be set a reasonable distance away from any trap which has been set by someone else. See page 11 for regulations related to setback distances from beaver houses, beaver dams, and muskrat houses.
- **Trapping Within the Built-up Portion of a Town:** Trapping is only permitted within ½ mile of the built-up portion of a city or town with the use of cage-type live traps and drowning sets, unless trapping on property owned by the trapper.

## MARKING BEAVER TRAPS

The law requires that each trap is labeled with trapper's name and address. However, most trappers label both their trap and the pole to which their trap is fastened. This eliminates the need for a warden to chop out or otherwise disturb the set in order to identify the trapper. It is a Department policy that if the trapper's name and address are displayed on the trap pole above the ice, the warden will not chop out the set to check the trap for a label.

- **Trap Identification:** Each trap set must be clearly labeled with trapper's full name and address. If two people are trapping together, it is not necessary to have the name and address of both trappers on each trap.

**Note:** The recommended method for labeling traps is to attach a small metal tag to each trap chain with a piece of wire. The tag should be preprinted with your name and address.

- **Visible Bait:** Foothold or killer-type traps must not be set within 50 yards of bait that is visible from above. Bait may be used for trapping if it is completely covered to prevent it from being seen from above, and it must be covered in such a way as to withstand wind action and other normal environmental conditions. Animal matter (e.g., feathers, bone, and fur) meet the definition of bait and visible attractor and must be covered or not visible from above if less than 50 yards from a foothold or killer-type trap.

**Note:** Visible attractors are not permitted during the early canid season. ■

# Regulations for Specific Types of Traps

1

## FOOTHOLD TRAPS

The statewide foothold trapping regulations are as follows:

- Foothold traps must be set at or below ground, ice, or snow levels.
- It is unlawful to use a trap with teeth on the jaws unless when set, placed, and tended, the trap is completely covered with water.
- All foothold traps set on dry land must have at least **three swiveling points** and the chain must be centrally mounted at the base of the trap. One swiveling point must be at the base of the trap, one midway in the chain, and one at the trap's anchoring point.

## 3 SWIVEL POINTS

### Centrally Mounted at the Base of the Trap

*Think of this as the central third of the base of the trap anywhere within the circle. This can be a J-hook coming directly from the base of the trap or a swivel attached to the trap with a D-ring, lap link or link of chain.*

2

### Midway-in the Chain

*This is halfway between the base of the trap and the anchoring point. A double swivel (which technically has two swiveling points) is commonly used here, but another swiveling point is still required at the anchoring point and at the base of the trap.*

3

### The Anchoring Point

*This is where the trap chain attaches to your anchoring device. An anchoring device may be a rebar stake, disposable or cable stake, or a drag. When using a drag, the anchoring point can be considered where the chain associated with the drag attaches to the trap chain. Remember that the use of drags is prohibited in WMDs 1-11, 14, 18, and 19.*

The foothold trapping regulations for WMDs 1-11, 14, 18, and 19 are as follows:

- Foothold traps must be securely anchored to the ground. The use of drags is prohibited in these WMDs.
- Foothold traps must have the **catch circle** cleared of woody vegetation, debris and man-made material that could cause entanglement of a trapped animal. Small sticks and rocks, and rotten/decaying woody material may be used for stepping guides, blocking, and backing for trap sets, if they are not rooted to the ground.
- These restrictions do not apply to foothold traps that when set, placed, and tended are fully or partially covered by water, those that are set on a muskrat “float”, or enclosed foothold traps.

In WMDs 1-6 and 8-11 no foothold trap may be used that has an inside jaw spread of more than 5½ inches unless when set, placed, and tended the trap is fully or partially covered by water.

### The Catch Circle

The catch circle is defined as the area that can be circumscribed by the outer edge of a trap when the trap and trap chain are fully extended and moved in a circle (360°) around the anchoring point. In WMD 1-11, 14, 18 and 19 the catch circle must be clear of material that could cause entanglement.

### Foothold Jaw Spread

Measure inside spread of jaw at the dog of the trap to ensure jaw spread is no more than 5½ inches.

### ENCLOSED FOOTHOLD TRAPS

Enclosed foothold traps that are designed primarily to catch raccoons and avoid incidental catches of other animals may be used throughout the general trapping season.

### CAGE-TYPE LIVE TRAPS

Cage-type live traps may be used to trap for furbearing animals. In WMDs 1-6 and 8-11, cage traps must have an opening of no more than 13" in width and 13" in height, unless the cage trap is being used for (1) wildlife research and survey activities; (2) removal of animals causing damage to property; or (3) to capture a bear. Culvert traps are a type of cage-type live trap.

### CABLE DEVICES

- **Bear:** Cable traps designed to capture and hold the animal by the foot are permitted for black bears. See pages 15-17 for more information on bear trapping.
- **Beaver:** Cable devices (lethal and non-lethal) may be used to trap beaver, but they must be set completely underwater. A cable restraint is considered non-lethal.

### COLONY TRAPS

Colony traps may be used (primarily for muskrat) throughout the trapping season, except that:

- The outside dimensions of colony traps may not exceed 7 inches high by 7 inches wide by 40 inches long.

- All colony traps must be set, placed, and tended so as to remain completely under water.
- For tending purposes, colony traps are considered killer-type traps.

### KILLER-TYPE (CONIBEAR) TRAPS

For information and rules on killer-type (conibear) traps, see page 8.

### WOODEN-BASED RAT TRAPS

Wooden-based rat traps may be set on land for weasel and red squirrel trapping if recessed in a wooden box with a hole no larger than 2 inches in diameter. ■

# Killer-Type (Conibear) Trap Rules

It is unlawful to use a killer-type trap with a jaw spread larger than 8 inches, except during the open season on beaver. These traps may only be used if when set, placed, and tended, the trap is completely underwater.

Killer-type traps with a jaw spread of 8 inches or less do not need an exclusion device if when set, placed, and tended, are completely underwater.

Killer-type traps with an inside jaw spread of 5 inches or less do not need an exclusion device if: 1) when set, placed, and tended, they are completely underwater, or if 2) the trap has an inside jaw spread 5 inches or less **and** is:

- Either set so as to be partially covered by water at all times, or
- Set under overhanging stream banks, or
- Used as a blind set (without the use of bait, lure or visible attractor). Bait, lure and visible attractor do not include animal droppings (scat) or urine.

## LYNX EXCLUSION DEVICE RULES

In all WMDs, killer-type traps with a jaw spread not to exceed 8 inches may be used on or above ground level if the trap is placed within a lynx exclusion device. The trap jaws must be completely within the device, the trap springs can be outside of the device.

Exclusion devices will have the following designs:

(1) For traps with a jaw spread less than or equal to 5 inches (primarily used for marten trapping), the device must have an opening of 4 x 4 inches or less. The entrance hole may be placed on the end or on the side of the device, and the trap must be set a minimum of 18 inches from the closest edge of the entrance hole (Figure 1).

(2) For traps with a jaw spread greater than 5 inches but less than 8 inches, (primarily used for fisher trapping) two designs may be constructed. For both devices the trap must be placed no closer than 18 inches from the closest edge of the entrance hole.

a. The first design has an entrance hole on the end of the device that must not exceed 5 x 6 inches. A baffle must be placed no more than 6 inches back from the entrance hole and must not leave an opening greater than 5 x 6 inches. With the baffle in place, the entrance hole and interior opening must not overlap to create an unobstructed view to the interior of the exclusion device (Figure 2a).

b. For the second design the entrance hole must not exceed 6 x 7 inches and must be placed on the side of the device. A baffle must be placed at the edge of the entrance with the baffle opening opposite of the entrance hole, and the interior opening must not exceed 6 x 6 inches (Figure 2b).

Figure 1. All exclusion devices have a 4 x 4 inch opening and are constructed for a killer-type trap with a jaw spread less than or equal to 5 inches (primarily used for marten trapping).

Red lines illustrate the locations of the entrances.

Figure 2. Legal exclusion devices for killer-type traps having a jaw spread between 5 and 8 inches. 2a. Is an example of a device with an entrance hole on the end of the device. The entrance hole must not exceed 5 x 6 inches. A baffle must be placed no more than 6 inches back from the entrance hole and must not leave an opening greater than 5 x 6 inches. With the baffle in place, the entrance hole and interior opening may not overlap to create an unobstructed view to the interior of the exclusion device. 2b. Is an example of a device where the entrance hole is placed on the side of the device and must not exceed 6 x 7 inches. A baffle must be placed at the edge of the entrance with the interior opening opposite of the entrance hole, and the interior opening must not exceed 6 x 6 inches.

**REQUIREMENTS FOR EXCLUSION DEVICES**

- Exclusion devices can be constructed of wood, plastic, or wire mesh. If using wire mesh, the mesh cannot exceed 1½ by 1½ inches, or 1 inch by 2 inch openings (side to side). The wire mesh has to be 16 gauge or less (wire diameter of 0.05 inches or greater).
- The opening slot in the exclusion device that allows the trap springs to extend outside the device can be no more than

7½ inches wide and a height of no more than 1½ inches.

- The back of the device must be secured to withstand heavy pulling; **if using wire mesh with a wood or plastic box, the wire mesh must wrap around two opposite sides of the box and be securely fastened.**
- **There must be at least 1 attachment point for each side of the device where a joint or panels come together.**

- The trap must be securely anchored outside of the exclusion device.
- Bait must not be visible from above and it must be covered in such a way as to withstand wind action and other normal environmental conditions.
- When enclosed in an exclusion device, killer-type traps can be set directly on the ground, or elevated in trees or on poles, with no specific requirements as to the height above ground or diameter of the tree or pole. ■

**TRAP TENDING LAWS**

# Trap Tending Laws

The trap tending laws are as follows:

- **Organized Towns:** All traps set in organized towns must be tended daily, except for killer-type traps, drowning sets, and under-ice drowning sets. Each killer-type trap or drowning set, except under-ice drowning sets, in organized towns must be tended at least once every three calendar days except if the drowning set is within ½ mile of the built-up portion of town (see page 4 for definition of built-up portion of town), then it must be checked every 24 hours.

- **Unorganized Towns:** All traps set in unorganized towns must be tended daily, except for killer-type traps, drowning sets, and under-ice drowning sets. Each killer-type trap or drowning set, except under-ice drowning sets, in unorganized towns must be tended at least once in every 5 calendar days.
- Traps must be **physically tended** and adjusted as necessary to remain legal. Electronic trap notification devices cannot be used in lieu of physical checks.

**Under-Ice Drowning Sets**

For enforcement and information purposes, all drowning sets for beaver and muskrat during January and February will be considered “under-ice drowning sets”, which have no tending requirement.

During November, December, March and April if a drowning set is under-ice there will be no tending requirement. However, if a trap set is in open water the trap tending requirements are: 1) 3 days for killer-type traps and drowning sets in organized towns, except if the drowning set is within ½ mile of the built-up portion of town it must be checked every 24 hours, and 2) 5 days for killer-type traps and drowning sets in unorganized towns. ■

# Landowner Permission Requirements

A person is strongly encouraged to seek landowner permission before going onto someone else's land for any purpose.

The trapping laws, with some exceptions, **require that a person have prior written permission from the landowner upon which the trap is to be set before setting traps:**

- Anywhere in an organized town.
- Within 200 yards of any occupied dwelling.
- On cultivated or pasture land used for agricultural purposes in an unorganized township if someone is living there.

**Landowner permission is not required:**

- When trapping for beaver that can be legally accessed via water.
- When trapping with the use of drowning sets on state-owned land and on public rights of way.
- When trapping with the use of drowning sets along navigable rivers and streams on privately owned land as long as the traps are set at least 200 yards away from any occupied dwelling.

**Note:** Setting traps on privately owned land is not permitted if the landowner indicated they do not want a person to trap there, either by a conspicuously posted sign or by word of mouth.

When trapping on someone else's land, the following is not allowed unless specific permission is given:

- Tearing down or destroying a fence or wall.
- Leaving open any gate or bars on another person's land unless they were open when found.
- Trampling or destroying crops.
- Cutting trees or removing branches from trees.

## TRAPPING ON PRIVATE PROPERTY

The Inland Fisheries and Wildlife Landowner Relations Program is working towards enhancing the relationship between landowners and land users. With approximately 94% of the land in Maine in private ownership, everyone must respect all landowners and their rights as landowners. All landowner wishes have to be followed by all outdoor recreational participants to help ensure access and use of private property in the years to come.

Trappers are expected to abide by a higher standard of landowner permission than any of the other outdoor recreational participants. This standard is a law that requires written permission from the landowner before going on someone else's land to set traps, except for beaver.

Because trappers have done a great job abiding by this requirement, there is now a better understanding of trapping by landowners and the public in general. Contacting the landowners for permission does put an extra burden on the trapper. However, the one-on-one communication between the trapper and landowner plays a vital role in improving landowner relations – not only for trappers – but for all outdoor recreational participants.

Although you are not required to get written permission before trapping beaver on land you do not own, you are not allowed to go on another person's land to trap beaver if the landowner has asked you not to go there, either verbally or by posted notice.

We receive several complaints each year that trappers have set up on a beaver colony that the landowner does not want removed. Please make every effort to avoid this type of conflict. You can do that by communicating with landowners prior to the opening of the trapping season as to what their wishes or concerns may be.

The law covering abuse of another's property contains several prohibited acts, but the one most likely to be encountered by a trapper is the cutting of trees or branches on the land of another. Cutting is not allowed without landowner permission.

We would like to thank all trappers for the excellent efforts they have displayed in helping us improve landowner relations. What you do does make a difference. ■

## TRAIL/GAME CAMERAS LAW

People using trail and game cameras may not place a camera upon another person's private land without written permission. All cameras must be labeled with the person's name and contact information.

# Regulations for Specific Species

## EARLY FOX AND COYOTE TRAPPING

In addition to the general trapping rules, the following rules apply:

- Killer-type traps are not permitted.
- Traps in the water are not permitted.
- Exposed bait or visible attractors are not permitted.

Trappers are permitted to keep any incidental opossum, raccoon or skunk that are caught in fox and coyote traps. Any other furbearing animal caught incidentally in fox and coyote traps must be released alive immediately, **except lynx as described on page 14**, or, if found dead, must be left in the trap and reported to a game warden as soon as possible.

## MUSKRAT TRAPPING

Musk rats have traditionally been one of Maine's most sought-after furbearers due to their relative abundance, ease of harvest, and historic value. Musk rats are a great species to target for new and experienced trappers, but trappers should make sure to carefully review all the muskrat-related regulations.

## EARLY MUSKRAT TRAPPING SEASON

In addition to the general trapping rules, the following rules apply:

- Traps must be set at or below ground or water level.

**Note:** For enforcement purposes, traps will be considered set "at or below ground or water level" when set on objects which muskrats frequently visit, such as floating logs, logs extending from the water onto the bank and tree stumps located in or near the water.

- The only traps allowed are foothold traps that shall be limited to an inside jaw spread between  $3\frac{1}{16}$  inches and  $5\frac{3}{8}$  inches, killer-type traps with a jaw spread of not more than 5 inches, and colony traps (foothold measurement description and colony trap restrictions explained on page 7).
- The use of any exposed bait or visible attractors are not permitted. Note that fruits and vegetables used for muskrat trapping are not considered bait or visible attractor.
- Keeping incidental mink, otter, or raccoon caught in muskrat traps is permitted. Any other furbearing animal caught incidentally in a muskrat trap must be immediately released alive, or, if found dead, must be left there in the trap and be reported to a game warden as soon as possible.

## LATE MUSKRAT TRAPPING SEASON

After the close of the general trapping season, muskrats may still be trapped, but only in those areas that are open to beaver trapping.

**After February 28**, in those Wildlife Management Districts that remain open to beaver trapping, muskrat trapping is restricted to 1) killer-type traps, foothold traps, and colony traps, which must be set, placed, and tended to remain underwater; or 2) foothold traps on "covered floats." During late muskrat trapping season, only one trap may be placed per float; the trap must be recessed 3 inches or greater from any opening in the cover; the trap chain or wire must be at least 3 feet long; and the maximum foothold trap size for covered floats sets is No.  $1\frac{1}{2}$  or equivalent (maximum inside jaw spread no greater than  $5\frac{3}{8}$  inches).

## COVERED FLOAT

A covered float is defined as a float completely covered on the sides and top with solid material; or hardware cloth, screen, or similar material, having a mesh size no greater than  $\frac{1}{2}$  inch square. A covered float must be set, placed, and tended so that it is completely surrounded by water and access to the float must be limited to openings at the extreme ends of the float and the openings must not exceed 7 inches in height or 14 inches in width. The use of exposed bait or visible attractor on covered floats is prohibited. Covered floats may be used during early muskrat, general, and late muskrat trapping season.

## BEAVER TRAPPING

- Traps set for beaver are restricted to killer-type traps and drowning sets.
- No person shall use meat or fish as bait while trapping for beaver.
- The setting of suitcase-type live traps during the beaver trapping season is prohibited except under the authorization of a Regional Wildlife Biologist or game warden as part of the Department's Animal Damage Control program.
- No person shall make advanced preparation on the trapping grounds for the taking of beaver or muskrat prior to the open season on these animals.
- Any otter, muskrat, or mink taken incidental to beaver trapping may be lawfully possessed.

## BEAVER CONFLICTS

Every effort shall be made to minimize the out-of-season removal of problem beaver. This shall be accomplished by: (1) maintaining in-season trapping opportunity in problem areas, and (2) restricting the removal of beaver by an agent of MDIFW, a landowner, or a person acting on behalf of the landowner who has prior approval from the Department. Except in emergency situations, no beaver will be removed within 30 days of the opening day of the beaver trapping season in that area. A list of locations where beaver have been removed within 30 days of the opening of the beaver trapping season will be maintained at regional offices. The above provisions will maintain a greater level of beaver trapping opportunity.

A list of beaver conflict sites may be available for your area. Please contact your regional wildlife biologist if you are interested in the location of recent beaver removal sites or conflict sites. Regional offices are listed on page 25.

## TRAPPING NEAR MUSKRAT HOUSES, BEAVER HOUSES AND BEAVER DAMS

It is illegal to destroy or damage a muskrat house or den, a beaver house or a beaver dam. You are not allowed to set a trap within 5 feet of a muskrat house, a muskrat den, or a beaver house, and you are not allowed to set a trap within 5 feet of an active beaver dam. A beaver dam is considered inactive if it is breached or is no longer being maintained by a beaver and shows no evidence of beaver activity.

The exceptions to this rule are that in WMDs 1-6, 8-11, 18 and 19, there is no required setback distance from an active beaver dam or beaver house.

For enforcement purposes, the Department uses the following definitions in deciding if a hole in the bank is part of a muskrat den or beaver house:

- **Muskrat Den:** A muskrat den is any cavity which is capped by muskrats with vegetative matter, including but not limited to hollow stumps and bank cavities. Holes in the bank not capped with vegetative matter are not considered to be muskrat dens.
- **Beaver House:** The term beaver house shall be interpreted to include any cavity which is capped by beaver with mud and sticks, including a cavity in the bank.

## 12 REGULATIONS FOR SPECIFIC SPECIES

For dams, dens, and houses, all measurements should be made from the trap itself. Sticks and poles used to construct the set are not considered part of the trap. The setback distance shall be measured as follows:

- **House:** measured from where the nearest edge of the house meets water or ice. In the case of a capped cavity on the bank, distance will be measured from where the nearest intersection edge of the cap meets the ground, water, or ice.

- **Dens:** measured from the nearest opening.
- **Dams:** beaver dams should be measured from where the nearest edge of the dam meets ground, water, or ice.

### BAG LIMITS FOR FISHER AND MARTEN

Trappers are not allowed to take or possess more than 25 marten or 25 fisher during the trapping season.

### INCIDENTAL CATCH OF MINK AND OTTER

Although it is not permitted to trap for mink or otter after the general trapping season closes, trappers may keep mink or otter if caught by accident during the beaver trapping season.

**Any otter caught from January 1 through April 30 must be registered with the Department within 10 days of harvest. ■**

## BIOLOGICAL SAMPLES

# Biological Samples

Trappers and hunters are required to submit a lower jaw or tooth from every bobcat, fisher, marten, and otter that is trapped or hunted (see instructions below). A tissue sample (small piece of tongue or other meat) is also required from bobcats. These samples provide the Department with the age and sex of the harvest, which will improve the management of these species. While this is an extra burden on the fur harvesting community, the information gained will benefit these species for all Maine citizens.

### MAKE YOUR SAMPLE COUNT

MDIFW receives hundreds of broken and/or unlabeled tooth samples each year, meaning valuable data is lost. The lab uses tissue in the root of the tooth for aging. Roots extend far under the gums beyond what is visible. When jaws are cut off too short, not enough of the root is included for aging. Be sure to cut far enough back to include most of the lower jaw to avoid this problem.

### WHAT BIOLOGICAL SAMPLES ARE REQUIRED?

Submit the following samples to the fur tagging agent at the time of registration:

#### *For Fisher, Marten, and River Otter*

Trappers must provide a lower jaw or canine tooth from each fisher, marten, and otter taken.

- Samples must be labeled with the species, sex, town, method, and date or seal number (see Figure 1).
- Samples from each individual animal must be bagged separately.

#### *For Bobcat*

- Hunters and trappers must provide a lower jaw, canine tooth, or lateral incisor tooth from each bobcat taken.
- Lateral incisors are very small and easy to take when fresh before the animal freezes. Run a pocket knife down each side and gently rock the knife left to right to loosen and pull the tooth out (see Figure 2).
- Hunters and trappers must also provide a Starburst-sized meat sample (tongue works great) so the labeled sex can be checked with DNA. Please keep this sample frozen to protect it from rotting.
- Bobcat samples must be labeled with the species, sex, and seal number. Both meat and tooth samples from the same animal may be bagged together.
- Replacement incisors can be requested by contacting the Furbearer Biologist.

Hunters and trappers may request age results by including their name and contact information with their sample.

Contact MDIFW Furbearer Biologist, Shevenell Webb, with any questions at [shevenell.webb@maine.gov](mailto:shevenell.webb@maine.gov) or (207) 287-8776. ■

**Figure 1.** Lower jaw with completed label. Arrow points to canine tooth.

**Figure 2.** Lower jaw of a bobcat. Arrows point to lateral incisor teeth.

# Tagging Requirements

## GENERAL REQUIREMENTS

The skins of all beaver, bobcat, coyote, fisher, fox, marten, mink and otter must be tagged within 10 days after the end of the season on each species. Tags must be attached to the skins of these furbearing animals before you may sell, gift, send, or transport the pelts except for preparation and tagging purposes. A fee of 25¢ may be charged for each pelt that is registered; the Department will no longer charge fur registration fees.

Skins of other furbearing animals (muskrat, opossum, raccoon, red squirrel, skunk and weasel) do not need to be tagged.

**Exceptions:** The skins of all bobcats taken by hunting shall be presented by the person who harvested the bobcat for tagging within 10 calendar days from when they were taken. All otter incidentally harvested during extended beaver seasons (January 1st through April 30th), must be tagged within 10 calendar days of harvesting the animal. Untagged coyotes are allowed to be gifted (see above for more information).

## BEAVER

All beaver must be tagged within 10 days of the final closing date on beaver. For example, if beaver are allowed to be trapped in some districts until April 30th, all beaver skins, regardless of where they were taken, must be tagged by May 10th.

## MARTEN AND FISHER

Trappers are no longer required to tag marten or fisher with temporary transportation tags. Trappers are still required to follow the rules for marten and fisher bag limits. Marten and fisher must still be registered and tagged at a Fur Tagging Station. A canine tooth or lower jaw must also be submitted to a fur tagging agent for marten and fisher that are trapped.

## BRINGING THE SKINS OF FURBEARING ANIMALS INTO MAINE FROM ANOTHER STATE OR PROVINCE

The skins of furbearing animals harvested in another state or province must be tagged in that state or province before being brought into Maine. If that state or province has no tagging requirements, the skins must be tagged in this state. The tagging of imported fur applies only to those nine species for which Maine requires tagging.

**Note:** Skins imported by taxidermists solely for taxidermy purposes do not require tagging.

## TAGGING ANIMALS BEFORE THE SKIN IS REMOVED FROM THE CARCASS

Skins may be tagged while still attached to the carcass, but it may make it difficult to properly prepare the skin if it has already been tagged.

## TAGGING FROZEN SKINS

If a skin will be frozen at the time it is presented for tagging, even if it hasn't been removed from the carcass, a popsicle stick, tongue depressor, or similar object can be inserted from the mouth hole through one of the eye holes before freezing. Removal of the stick at the time of tagging allows the tag to be inserted in the skin without thawing it out. Tagging agents may refuse to tag frozen skins which have not been prepared in this manner.

## TAGGING LOCATIONS

Bobcat and otter must be tagged by Department personnel. Other furs may be tagged at one of the many fur tagging stations which are located throughout the state. Fur tagging stations are listed on page 24, available on our website, or by calling the regional offices listed on page 25. In addition to fur tagging stations, furs may be tagged at any regional office of the Department and, through prior arrangement, by any Department game warden or wildlife biologist. Please call ahead and set up an appointment to tag your furs with a wildlife biologist at a regional office.

## FALL & SPRING FUR TAGGING DAYS

LOCATION	FALL	SPRING
ASHLAND	January 3, 2023 10am-6pm	May 2, 2023 10am-6pm
BANGOR	January 4, 2023 10am-6pm	April 13, 2023 10am-6pm
ENFIELD	January 5, 2023 10am-6pm	April 20, 2023 10am-6pm
GRAY	January 5, 2023 10am-6pm	April 19, 2023 10am-6pm
JONESBORO	January 10, 2023 10am-6pm	April 25, 2023 10am-6pm
SIDNEY	January 3, 2023 10am-6pm	April 20, 2023 10am-6pm
STRONG	January 10, 2023 10am-6pm	April 12, 2023 10am-6pm

## COYOTE GIFTING

Harvested coyotes can be gifted to another person without the attachment of a permanent tag, but must have the following information attached to the coyote: person's name who harvested it, hunting or trapping license number, harvest method, harvest date, harvest town.

## BOBCAT & OTTER TAGGING

Bobcat and otter must be tagged by Department personnel.

## TAKING FURS OUT OF THE STATE

If furs have been properly tagged, it is permitted by Maine law to take or ship furs out of the state. Federal laws and regulations are subject to change and should be consulted before exporting any CITES species (i.e., bobcat, black bear, and river otter) outside the United States. For information and permit applications, please contact:

**U.S. Fish & Wildlife Service Office of Law Enforcement**  
**70 E. Sunrise Hwy, Suite 419**  
**Valley Stream, NY 11580**  
**Phone: (516) 825-3950**  
**Fax: (516) 825-3597**

## MAINE HIDE DEALERS

A list of hide dealers can be provided upon request by contacting (207) 287-8000. ■

# Lynx Protection Zone & Trap Restrictions

*Canada lynx are a federally listed Threatened Species. There is no open season for the trapping or hunting of lynx in Maine. To protect lynx and to help Maine trappers avoid accidentally taking lynx, the Department has delineated a lynx protection zone in northern Maine where special regulations are in effect.*

## FOOTHOLD TRAPS

- **Statewide:** When set on dry land, a trap must have at least three swiveling points (at the base of the trap, midway in the chain, and at the trap's anchoring point). Foothold traps cannot be set above ground or snow level.
- **WMDs 1-11, 14, 18, and 19:** When set on dry land, the use of drags is prohibited and the catch circle must be cleared of woody vegetation, debris and man-made material that could cause entanglement of a trapped animal.
- **WMDs 1-6 and 8-11:** No foothold trap may be used that has an inside jaw spread of more than 5½ inches unless when set, placed, and tended, the trap is completely underwater.

## KILLER-TYPE (CONIBEAR) TRAPS

**Statewide:** Killer-type (conibear) traps must be set within a lynx exclusion device when set on dry land, except that killer-type traps with an inside jaw spread of 5 inches or less may be set without an exclusion device if the trap is set so as to be partially covered by water at all times, set under an overhanging stream bank, or used at a blind set without the use of bait, lure or visible attractor. For more information on foothold and killer-type traps see pages 6-8.

## WHAT DO I DO IF I CATCH A LYNX?

A person who catches a lynx must call the lynx hotline at (207) 592-4734 or a local game warden **as soon as possible and prior to removing the animal from the trap**, unless a Department official cannot be reached in time to prevent injury to the lynx. Any lynx released under this provision must be reported to the Department within 24 hours from the time it was discovered.

The lynx hotline ((207) 592-4734) is staffed 24 hours a day, 7 days a week during the trapping season. In most circumstances a biologist will chemically immobilize, examine, and release the lynx. For more information on lynx please contact Jennifer Vashon at (207) 941-4571. ■

CANADA LYNX PROTECTION ZONE FOR TRAPPING RESTRICTIONS

**IF YOU CATCH A CAT AND ARE UNSURE WHETHER IT IS A BOBCAT OR A LYNX, PLEASE CONTACT A WILDLIFE BIOLOGIST OR WARDEN IMMEDIATELY BY CALLING (207) 592-4734**

*See page 20 for a description of lynx and bobcats.*

# Bear Trapping

## BEAR TRAPPING PERMIT AND BAG LIMITS

A bear trapping permit and a big game hunting license or a bear trapping permit and trapping license are required to set a trap for a bear during the bear trapping season (September 1 - October 31). You are allowed to take one bear by trapping and one bear by hunting annually. The fee for a bear trapping permit is \$10 for residents and \$67 for nonresidents.

Effective as of January 1, 2022, to purchase a bear trapping permit you have three options:

**Option 1:** Must have completed a Maine Trapping Education course (includes all furbearers and bear) dated after 1978 OR Previously held a Maine Bear Trapping permit prior to 2022.

**Option 2:** Must have completed the new Maine Black Bear Trapping Education course (online or in-person).

**Option 3:** A person may trap for bear under the supervision of and in the presence of a licensed hunting guide who has successfully completed the Maine Black Bear Trapping Education course.

First time trapping licenses (including first time bear trapping permits) and bear trapping permits for those trapping under the direct supervision of a guide who has taken the bear trapping education course must be purchased through the MDIFW office in Augusta (in person or by emailing [ifw.licensing@maine.gov](mailto:ifw.licensing@maine.gov) or mailing a Trapping License Application to the MDIFW Augusta office). Trapping license renewals, including bear trapping renewal permits, may be purchased online at [mefishwildlife.com](http://mefishwildlife.com).

## BEAR TRAPPING LAWS

If you trap for black bear, you are required to follow the same general trapping rules regarding the labeling of traps, the tending of traps, and the need to obtain landowner permission.

If you trap a bear, you are required to follow the same transportation and registration rules as those for bear taken by hunting.

You are also required to follow other rules specific to bear trapping, as follows:

- Bear may be trapped only with the use of cable traps (foothold cable restraint) or cage-type live traps.

- Whenever a cage-type live trap is used to trap bear, the trap must be enclosed and must be heavily constructed to prevent damage from bears, and also must have adequate openings for ventilation and cooling inside when the door is closed. Traps must also be constructed with no sharp intrusions to injure bears, and be large enough for bears to turn around inside the closed trap.
  - You are not allowed to have more than one trap set for bear at any time.
  - All bear traps must be tended at least once a day. Electronic trap notification devices cannot be used in lieu of physical checks.
  - You are not allowed to catch a bear in a trap and allow another person to kill or register the bear.
  - You cannot continue to trap for bear after you have already killed or registered one in a trap.
  - Bears caught in traps must be killed or released and not moved away from the catch site. A bear caught in a trap may not be used in conjunction with a hunt or to train a dog for bear hunting.
  - The same rules apply to hunting and trapping for bear with the use of bait. See section below for more information on using bait when trapping a black bear.
  - You may not trap within 500 yards of a solid waste disposal site. These areas can be identified by a visible line of demarcation.
- Exception:** an agent of the commissioner is exempt for the purpose of live trapping of nuisance bear.

## BAIT

Bait may be placed up to 30 days prior to the opening day of the bear bait hunting season and no later than October 31. Bait areas must be cleaned up by November 10. Bait can be used to assist dog hunters and trappers, but it is illegal to shoot a bear over bait after the close of the bait season.

Hunting with the use of bait is defined as hunting from an observation stand, blind, or other location that overlooks any bait or food, except standing crops and foods that have been left as a result of normal agricultural operations or natural occurrence.

Bear bait means any animal, plant, or derivative thereof, used to attract bear. This does not include packaging or container materials that fall within the definition of litter under Title 17, §2263.

A person may not place any medicinal, poisonous, or stupefying substance to entice any animal, including bear. It is unlawful to disturb or interfere with a bait site using chemicals or any other method.

Bait may not be placed to entice, hunt or trap black bear unless:

- The bait is placed at least 50 yards from any travel way that is accessible by a conventional 2-wheel or 4-wheel drive vehicle.
- The observation stand, blind, or bait area is plainly labeled with a 2 inch by 4 inch tag with the name and address of the baiter.
- The bait is placed more than 500 yards from any solid waste disposal site or campground.
- The bait is placed more than 500 yards from an occupied dwelling, unless written permission is granted by the owner or tenant.
- The person placing bait on another person's land has the landowner's permission (oral or in writing).
- If placing bait on a wildlife management area, you need to secure a permit from MDIFW. To apply for a bear baiting permit, contact the wildlife biologist in your administrative region (see p. 25).
- If placing bait on Public Reserved Land, you need to secure a permit from the Bureau of Parks and Lands (for info, call 207-287-3821).

Baiting of animals is prohibited in State Parks and Historic Sites.

## BEAR HUNTING PROHIBITIONS

A person cannot, within 50 yards of a bait site and without written permission from the person who maintains the bait site, hunt, trap, molest, or harass bear.

## LAWS REGARDING REGISTRATION

- Prior to registration, bear may be dismembered for ease of transportation, all edible meat, the head and evidence of sex must be presented for registration. The viscera, hide, lower legs and rib cage, including the ribs, spine and pelvis, are not required to be presented for registration but must be disposed of where they are not visible to a person traveling on a public or private way.
- Gift bear must have each part clearly labeled with the name and address of the person who registered the animal and the year in which it was registered.

**Note:** Hunters and trappers are required to remove a premolar tooth from the bear they harvest and provide the tooth at registration (instructions available at the registration stations and online at [mefishwildlife.com](http://mefishwildlife.com)). Hunters and trappers will be notified of the age of the bear they harvested on the Bear Hunting page of the MDIFW website prior to the start of the next bear hunting season (late August). ■

## NEW BEAR TRAPPING RULES ESTABLISHED IN 2019

These rules were developed to improve design and deployment standards for cable traps (foot-restraints) used to capture and harvest black bears, while minimizing incidental capture of non-targets, including the Federally Threatened Canada lynx. Most importantly, these rules ensure that cable traps are set in a manner to effectively capture and hold a black bear by the foot or leg and minimize the risk of injury.

### Cable Traps Design & Deployment Standards

#### Design Standards for All Cable Traps Used to Capture Black Bears

Whenever a cable trap is used to trap for bear:

- The cable must have a minimum closing diameter of not less than 2½ inches
- The cable must be at least ⅜ inches in diameter
- The cable must include at least one swivel, which is typically located between the foot loop and the anchor point

#### Deployment Standards for ALL Cable Traps Used to Capture Black Bears

- The cable must be set at or below ground level in such a manner as to catch the animal only by the foot or leg.
- Drags are prohibited.

- The cable must be securely attached to a fixed anchor point (tree is the preferred anchor).
- If a tree is used as an anchor, it must be at least 6 inches in diameter at 4.5 feet above ground level and must be free of limbs for at least 7 feet above the ground.
- The catch circle, which is the distance from the anchor to the end of the closed cable loop, must be no greater than 8 feet.
- The area within the catch circle must be clear of woody vegetation, debris and manmade material that could cause entanglement of a trapped bear. This restriction does not include a tree used as an anchor. Sticks, rocks, and rotten/decaying woody material may be used for stepping guides, blocking, and backing for trap sets, if they are not rooted to the ground.

#### COMMERCIALLY AVAILABLE CABLE TRAPS

A list of commercially available legal cable traps (when set according to the parameters described), is available on our website at [mefishwildlife.com/beartrap](http://mefishwildlife.com/beartrap).

#### Examples of Commercially Available **ILLEGAL** Cable Traps

- Belisle
- Unmodified M-15

1

A soda can is 2½" diameter, use a marker to note the spot for securing the stop.

2

Place the stop on the mark and close the loop.

3

Measure the loop to insure the closing diameter is no less than 2½".

The cable must include at least one swivel which is typically located between the foot loop and the anchor point.

The distance from the anchor (often the tree) to the end of the closed cable loop point must be no greater than 8 feet.

## Bucket, Tube or Pipe-style Traps Design & Deployment Standards

### Design Standards for Bucket, Tube or Pipe-style Traps Used to Capture Black Bears

Whenever a cable trap is used in conjunction with a device that is designed to capture a bear when it reaches into the device to obtain bait (e.g. bucket, tube, or pipe-style traps):

- The trigger must be recessed at least 12 inches below the opening of the device.
- The opening and inside diameter of the device must be no more than 6 inches.
- A bucket or other similar device can be used if it is modified to have an opening and inside diameter no greater than 6 inches.

### Deployment Standards for Bucket, Tube or Pipe-style Traps Used to Capture Black Bears

- Animal-based bait and/or lure cannot be placed within the bucket, tube or pipe. Animal-based bait is defined as animal matter including meat, skin, bones, feathers, hair or any other solid substance that used to be part of an animal. This includes live or dead fish.
- Only non-animal based bait and/or lure can be placed within the device and it must be placed below the trigger.
- The opening to the device must be covered by a weight of at least 30 pounds when set and tended to prevent access by non-target species.

### ILLEGAL UNMODIFIED

The Unmodified M-15 trap is illegal in Maine.

### LEGAL MODIFIED

The M-15 trap is legal if it is modified to have an opening and inside diameter no greater than 6" and if the trigger is recessed at least 12" below the opening of the device.

Cut a 6" diameter hole in the lid.

Insert a tube with an inside diameter no greater than 6" and at least 12" tall to allow the trigger to be set 12" below the opening, then place the tube in the bucket and secure the lid.

# 2022-2023 Beaver Trapping Closures

by Wildlife Management Districts (WMDs) *Please refer to page 4 for the beaver trapping season dates.*

## WMD 1

No closures

## WMD 2

No closures

## WMD 3

No closures

## WMD 4

No closures

## WMD 5

The following towns shall be open but with the excepted part of the town closed:

**Ashland**, except unnamed brook on land owned by Artemus and Rosemary Coffin located north of Goding Road and west of Route 11.

The following town shall be closed but with the excepted part of the town open:

**Trout Brook Twp.**, except north of Trout Brook.

## WMD 6

The following towns shall be open but with the excepted part of the town closed:

**Ashland**, except section of Nowland Brook on land owned by Ronald Rushinal adjacent to the Nowland Road.

**Castle Hill**, except unnamed tributary to North Branch Presque Isle Stream on land owned by Melvin Johnson. Land located on east side of Haystack Mountain and south of Route 163.

**Fort Fairfield**, except the property of Jane and Mark Stanford at 122 West Limestone Road containing a portion of Hacker Brook.

## WMD 7

The following towns shall be open but with the excepted part of the town closed:

**Twp. 6 North of Weld**, except Mud Pond and outlet.

**Upton**, except section of B Brook from the confluence with B Pond, downstream to the first road crossing.

## WMD 8

The following towns shall be open but with the excepted part of the town closed:

**Blake Gore**, except Capehorn Pond.

**Forsythe Twp.**, except Turner Pond.

**Holeb Twp.**, except Fish Pond and tributaries.

**Johnson Mountain Twp.**, except Markham and outlet to Route 201.

**Prentiss Twp.**, except Capehorn Pond.

**Tomhegan Game Sanctuary, the Pittston Farm Game Sanctuary, the Moosehead Lake Game Sanctuary and Somerset Game Sanctuary shall all be open.**

## WMD 9

The following towns shall be open but with the excepted part of the town closed:

**T2 R12 WELS**, except for the property of Ben Bailey located from the intersection of the Sias Hill/Greenville Road and the western boundary of the T2 R12 WELS township line south to the T1 R12 WELS township line east along the southern boundary of T2 R12 WELS to the intersection the T2 R12 WELS southern boundary and Gulliver Brook. From this intersection the property line follows Gulliver Brook northwest to Big Fisher Pond where the property line runs west to east across the middle of the pond where it then continues along the road at the outlet of Big Fisher Pond in a south then northwest direction to the Sias Hill/Greenville Road where the property line follows the Sias Hill/Greenville road in a southwesterly line to the western T2 R12 WELS township line boundary.

## WMD 10

No closures

## WMD 11

No closures

## WMD 12

The following towns shall be open but with the excepted part of the town closed:

**Gilead**, except Carlton Brook.

**Hartford**, except part of the west tributary to Little Bear Pond that runs through the property owned by Sylvia Mahoney. The closed beaver flowage is located on the northeast side of the Mahoney Road.

**Twp. 6 North of Weld**, except Mud Pond and outlet.

## WMD 13

The following towns shall be open but with the excepted part of the town closed:

**Concord Twp.**, except Owen's Marsh and outlet to Route 16.

## WMD 14

No closures

## WMD 15

The following towns shall be open but with the excepted part of the town closed:

**Brownfield**, except Shuther Brook from Peary Mt. Road downstream to Shepards River.

**Cornish**, except that portion of "the heath", and eastern tributary of Brown Brook, one-half mile eastward from Watson Hill Road.

**Porter**, except Thurston Brook from Kennard Hill Road to Bickford Pond and Mill Brook from Maine/New Hampshire border to Bickford Pond.

**Waterford**, except portion of Kedar Brook upstream of Route 37.

**Otisfield**, except Coon Swamp and tributaries.

## WMD 16

The following towns shall be open but with the excepted part of the town closed:

**Mercer**, except the land of David P. Van Burgel and Kathy J. Scott, which is located between the Hampshire Hill Road and the Rome Road and includes a portion of Hilton Brook.

**WMD 17**

The following towns shall be open but with the excepted part of the town closed:

**Atkinson**, except the flowage located on the east side of the Dorr Road and within the Bud Leavitt Wildlife Management Area.

**Charleston**, except the land of R. Christopher Almy, which includes a portion of South Gate Brook and a tributary to Hudson Brook.

**Charleston**, except the wetland located down the hill from the Charleston Correctional Facility and bordered by Route 15 and the Whiting Road, and completely within the Bud Leavitt Wildlife Management Area.

**Hartland**, except tributaries to Thompson Brook west and north of Route 23 that are on the property owned by John Studt.

**Hermon**, except the land of Herbert Bates bordered on the north by the Fuller Road, on the east by the New Boston Road, on the south by Route 2/100, and to the west by the Billings Road.

**WMD 18**

No closures

**WMD 19**

The following towns shall be open but with the excepted part of the town closed:

T3 ND, except Duck Lake Brook.

T4 ND, except Duck Lake Brook.

**WMD 20**

No closures

**WMD 21**

The following towns shall be open but with the excepted part of the town closed:

**Pownal**, except tributary to Chandler River between Allen Road and Chadsey Road, and Chandler River between Poland Range Road and Lawrence Road.

**WMD 22**

The following towns shall be completely closed with no part of the town open:

Perkins Twp. (Swan Island)

**WMD 23**

The following towns shall be open but with the excepted part of the town closed:

**Freedom**, except wetlands located east of the North Palermo Road, south of the Sibley Road, west of Bennett Lane, and north of Hutchins Corner.

**Montville**, except the parcel of land owned by the Sheepscot Wellspring Land Alliance located north of the Burnham Hill Road, west of the Howard Road, south of the Penny Road, and east of the Halldale Road.

**Montville**, except land owned by the Sheepscot Wellspring Land Alliance located north of the Burnham Hill Road between Herb Jackson Road and the Mountain Road.

**WMD 24**

No closures

**WMD 25**

The following towns shall be open but with the excepted part of the town closed:

**Bristol**, except unnamed tributary to the Pemaquid River that passes through the land owned by James Deucher, north of the Rock Schoolhouse Road (Fire Road B 31-1).

**Bristol**, except Johnson's Meadow on Trout Brook, so called, to the Chamberlain Post Office.

**Edgecomb**, except the property of Lloyd Lawrence east of Parson's creek, and west of Parson's Point Road.

**Edgecomb**, except Charles and Constance Schmid Land Preserve, a private land preserve that encompasses 766 acres located off of the Middle Road, Old County Road and Mount Hunger Road East, and Mount Hunger Road North.

**Jefferson**, except south of the Atkins Road, west of Route 215 to the town line, and west of the Egypt road to the Jefferson/Whitefield town line.

**Northport**, except the land of Ovid Santoro located east of State Route 52, north of the Northport/Lincolntown line, north of Pitcher Pond, west of the thread of Sucker Brook, and south of Pitcher Road.

**Rockport**, except for the waterbodies known as "reflection ponds" located north of Park Street, on both the east and west side of Whitetail Drive, and on both the north and south side of Reflection Pond Road. All waterbodies within this subdivision shall be closed.

**South Thomaston**, except the land of C. M. Waterman, so called Towers Brook, west and north of Route 73, and south of the Grierson Road.

**Whitefield**, except east of the Weary Pond Road to the Jefferson/Whitefield Town line, east of Hollywood Boulevard to the Jefferson/Whitefield Town Line, and south of the Hilton Road.

**Note:** Land in the Jefferson-Whitefield Sanctuary that is in the town of Whitefield will be open to beaver trapping except for the areas described above.

**Woolwich**, except the flowage located on the property of Yvonne Stanton east of Hockomock Road and South of Murphy's Corner Road.

**WMD 26**

The following towns shall be open but with the excepted part of the town closed:

**Searsport**, except flowage on the property of Richard and Joyce Stevens located south and east of the junction of the Mt. Ephraim road and the Nickels Road.

**Stonington**, except the land of Richards Marital Trust and Richards Community Property Trust, including Ames Pond and a portion of its inlet.

**WMD 27**

No closures

**WMD 28**

No closures

**WMD 29**

The following towns shall be open but with the excepted part of the town closed:

Frenchboro, except Long Island. ■

# Identifying Rare Mammals

## WOLVES

Large coyotes (50+ pounds) have been reported in Maine, but they are uncommon. Any canid 50 pounds or greater may be a wolf, wolf-hybrid, or domestic dog. Maine law protects all wildlife from hunting or trapping when there is not a specific hunting or trapping season for the species. It is also illegal to indiscriminately shoot domestic dogs or wolf-hybrids. We have documented several wolves and wolf hybrids over the last 20 years in Maine. In most cases, we believe these animals were released from captivity. However, wild wolves have been trapped in southern Quebec and it would have been possible for these animals to travel into Maine. Please use care in identifying any large canids you encounter. If you suspect you have a canine in a trap that is over 4.5 ft. in length (tip of nose to tip of tail) and is over 50 pounds, contact MDIFW before dispatching the animal.

## COUGARS

Cougars have been extirpated from much of their historic range in eastern North America. The last cougar killed in Maine was in Somerset County on the Maine/Quebec border in 1938. More recently, a 3-year-old male cougar from the Black Hills of South Dakota was struck and killed by a vehicle in Milford, Connecticut in 2011 (a distance of >2,000 km). Cougars have been sporadically documented in eastern Canada from known mortalities (3 cougars) or DNA (17 cougars) in Quebec from 1992-2011. The Department receives possible cougar sightings each year, but most lack physical evidence. If you see a cougar or other evidence of a cougar (e.g., tracks, scat), take photos and contact a regional wildlife biologist.

## NEW ENGLAND COTTONTAIL RABBITS

If you are trapping in southern Maine, MDIFW would like to know if you accidentally trap or see New England cottontail rabbits. Cottontail rabbits are smaller than snowshoe hare, have hind feet less than 4 inches in length, and do not turn white in the winter. Their coat remains brown all year round. Please let us know about any rabbits you see. This is Maine's only native rabbit and MDIFW is actively trying to restore its population. Identifying new areas where the rabbit occurs could greatly benefit restoration efforts. If you accidentally capture a cottontail rabbit, please contact a regional wildlife biologist or submit the sighting location at [mefishwildlife.com/rabbits](http://mefishwildlife.com/rabbits). ■

## LYNX VS. BOBCAT: KNOW THE DIFFERENCE

If you trap a bobcat that looks like a cross between a lynx and a bobcat, we would like to know about it. We have recovered several lynx-bobcat hybrids in north central Maine and are interested in documenting other specimens. Remember, if you are uncertain whether you have trapped a lynx or a bobcat please call a biologist or warden before dispatching the animal.

If you have already dispatched the animal, and think it has unusual characteristics for a bobcat, we are still interested in seeing it.

	LYNX	BOBCAT
EAR TUFTS	Generally greater than 1"	Generally less than 1"
FACIAL RUFFS	Larger facial ruffs with black banding at outer edges	Smaller facial ruffs with less distinct banding on outer edge
PELT COLOR	More uniform coat color. Generally grey pelt including the back of the hind legs. Belly fur greyish white with some black spots.	Reddish brown pelt with distinctive dark brown fur along the back of the hind legs. Belly fur white with distinct black spots.
TAIL COLOR	Generally matches body color except the entire tip (about the last 1") is black	Usually has dark bars and the tip of the tail is black on upper side but is white on underside
FEET	Large and snowshoe-like feet and hind legs are longer than the front, giving a "stooped" appearance	Smaller feet (proportional to body) and hind legs are not as long as lynx
TRACK SIZE	<b>In dirt:</b> up to 3 3/8" wide x 3 3/4" long	<b>In dirt:</b> up to 2 5/8" wide x 2 1/2" long
	<b>In snow:</b> up to 5 1/2" wide x 5 1/2" long	<b>In snow:</b> up to 2 1/2" wide x 2 1/2" long
	Stride: 11-18"	Stride: 6-14"

**TRACK & TRACK PATTERNS FOR BOBCAT, LYNX, COYOTE, AND DOMESTIC DOGS**

SPECIES	GENERAL SHAPE	WALKING STRIDE	PRINT SIZE (FRONT FOOT)	TRACK PATTERN
<b>Bobcat</b>	General round appearance. Heel points in slightly different direction than toes. No nail marks, but if present, attached to toe marks.	11" to 23"	Length: 1 1/8" to 2 1/2" Width: 1 1/8" to 2 5/8"	Direct or double register walking pattern. Trail pattern zigzags right-left-right-left.
<b>Lynx</b>	Same as bobcat but tracks show a lot more hair. Smaller pads than a cougar.	15" to 31"	Length: 3 1/4" to 3 3/4" Width: 3" to 3 3/8" Outline of hair impression: Length: 4 1/2" to 5 3/8" Width: 3 3/8" to 5 1/2"	Same as bobcat
<b>Coyote</b>	4 toes, oval shaped track. Front nails often close together. Side nails often do not register.	Eastern: 17 1/2" to 26"	Eastern: Length - 2 7/8" to 3 1/2" Width - 1 7/8" to 2 1/2"	Trail pattern usually is in a straight line. Walking pattern is usually direct registering.
<b>Dog</b>	Similar to wolves and coyotes. Inner toes often splayed outwards.	Varies with breed	Varies with breed	Trail pattern sloppy, wandering, not usually in a straight line. Walking pattern is often double register.

# Maine Mammal Tracks

F - Front track

H - Hind track

T - Tail marks may be present

Tracks Not to Scale

Sizes indicate length of tracks. Depending on the substrate (snow, mud, dust, sand, etc.) and the speed the animal was moving, tracks may show great variability in their appearance.

TRACK PATTERN

	WHITE-TAILED DEER 2½" to 3"	MOOSE 4½" to 6½"
TRACK PATTERN	H  F	F - 2½" 
	DOG - 2¼" to 4"	COYOTE H - 2¼" F - 2" 
	F - 2¼" 	F - 2" 
	RED FOX H - 2" 	GRAY FOX H - 1¾" 
H  F	F - 4" 	
BOBCAT - 2"	LYNX H - 3½"	HOUSE CAT 1½"
TRACK PATTERN	F - 1½" 	
	OTTER H - 3"	FISHER - 2¼"
	MINK - 1"	WEASEL - ½" to 1"

F - Front track

H - Hind track

T - Tail marks may be present

Tracks Not to Scale

Sizes indicate length of tracks. Depending on the substrate (snow, mud, dust, sand, etc.) and the speed the animal was moving, tracks may show great variability in their appearance.

TRACK PATTERN

	 H - 4"  F - 2½" <b>RACCOON</b>	 H - 2½"  F - 2" <b>STRIPED SKUNK</b>
	 H - 3½"  F - 2¾" <b>PORCUPINE</b>	 H - 6"  F - 3" <b>BEAVER</b> T
	 H - 7"  F - 4½" <b>BLACK BEAR</b>	 H - 2"  F - 1¼" <b>OPOSSUM</b> T
	 H - 2¼"  F - 2" <b>WOODCHUCK</b>	 H - 3"  F - 1½" <b>MUSKRAT</b> T

---

TRACK PATTERN

	 H - 5"  F - 2" <b>SNOWSHOE HARE</b>	 H - 3"  F - 1" <b>COTTONTAIL RABBIT</b>
	 H - 2¼"  F - 1½" <b>GRAY SQUIRREL</b>	 H - ¼"  F - ¼" <b>WHITE-FOOTED MOUSE</b> T

## 24 FUR TAGGING STATIONS

**FUR TAGGING STATIONS** *Fur may also be tagged at MDIFW regional offices and by game wardens.*

Fur tagging stations are subject to change. Please check our website or call business to confirm their status.
