GOULD POND
New Limerick, Aroostook Co.
U.S.G.S. Meduxnekeag Lake, Me. (7 1/2')

FISHES
Brook trout        Fathead minnow
Minnows           Banded killifish
Blacknose shiner  Pumpkinseed sunfish

Physical Characteristics
Area - 44 acres       Temperatures
Surface - 77°F
Maximum depth - 6 feet  5 feet - 74°F
Principal fishery: Baitfish

Gould Pond is very shallow except for one small area near the northwest shore. During the summer, pond temperatures become warm and about equal at all depths. Occasional brook trout are taken, although water quality is marginal for this species. The pond contains several species of minnows and has good potential for management as a bait pond.

Gould Pond is presently accessible by a one-half mile trail.

Surveyed - August, 1965
