NORTH POND

T14 R9, Aroostook Co.
U.S.G.S. Gardner Pond, Me (7 1/2')

Fishes

Brook trout

Physical Characteristics

Area - 15 acres
Average depth - 9 feet
Maximum depth - 16 feet

Temperatures:
Surface - 61⁰F
18 feet - 54⁰F

Principal fishery: Brook trout

North Pond is a small, coldwater pond that has ideal habitat for brook trout. Dissolved oxygen values are ample at all levels, except that a mild oxygen deficiency exists below 15 feet.

The trout fishery is maintained entirely by natural reproduction within the pond. Lack of competition from other fish is an important key to the success of brook trout in North Pond.

Conservative fishing regulations have been implemented to maintain and enhance the sport fishery.

North Pond is in close proximity to the many ponds situated in T15 R9, a township owned by the State of Maine.

Access to the pond is via a footpath from the improved gravel road system in T15 R9.
