Minnows  Longnose sucker
Golden shiner  White sucker
Common shiner  Hornpout (bullhead)

Physical Characteristics

Area - 21 acres
Maximum depth - 22 feet

Temperatures:
Surface - 71°F
21 feet - 49°F

Principal fisheries: Brook trout, baitfish

Greenbush Pond is located north of Greenbush Mountain. The pond has no major inlets, but a short outlet flows east into the North Branch of the Dead River. The pond’s shoreline is lightly developed.

Water quality in Greenbush Pond is marginal for coldwater gamefish. Brook trout enter the pond seasonally from its outlet, but poor water conditions in the summer and a lack of spawning habitat allow for only a very limited fishery. Trout growth is generally poor with heavy competition from other fish species. The pond is not stocked.

Greenbush Pond is accessible off Route 27. The pond is open to fishing under general law in both the summer and winter months.
