LOWER AND MIDDLE LEAD MOUNTAIN PONDS
T28MD, Hancock Co.
U.S.G.S. Rocky Pond, ME (7 1/2')

Physical Characteristics
Principal Fishery: White perch, chain pickerel, brown trout

Area - 486 acres
Temperature
Surface - 71°F
Maximum depth - 31 feet
30 feet - 54°F

Fishes
Brown trout
Brook trout
Rainbow smelt
White perch
Yellow perch
Chain pickerel

Minnows
Golden shiner
White sucker
Hornpout (bullhead)
Pumpkinseed sunfish
American eel

Brown trout have provided a satisfactory fishery in Upper Lead Mountain Pond, and they will probably do the same here. The primary fishery is for white perch, many of which attain attractive sizes. On a good day, a typical catch of perch will include a good proportion of 10-12 inch fish. Further, this pond is one of the few which still produces some exceptionally large 14-15 inch perch. Pickerel provide an active fishery.

An unusual feature of this pond is that it has two outlets, Starvation Brook which flows into the East Branch of the Union River and Sevenmile Brook, which is a tributary to the Middle Branch. The lower end of Sevenmile Brook supports brook trout.

Surveyed - August, 1942
