Area — 175 acres

Temperatures:

Maximum depth — 12 feet

Surface — 73° F.

12 feet — 71° F.

Principal fishery: Chain pickerel, bullhead (hornpout), yellow perch.

Paradise Pond is a shallow, warmwater pond containing suitable habitat for a smallmouth bass fishery. An introduction of smallmouth bass is recommended under the supervision of the Regional Fishery Biologist when there is sufficient interest in the area. Until such time this pond should be managed for the fishes present.

No stocking of coldwater fishes is recommended.

Surveyed — August, 1941
