Big Concord Pond
Woodstock Twp., Oxford Co.
U.S.G.S. Mt. Zircon, Me. (7 1/2')

Fish

Brook trout  White sucker
Smallmouth bass  Creek chub sucker
White perch  Hornpout (bullhead)
Chain pickerel  Pumpkinseed sunfish

Physical Characteristics

Area - 135 acres  Temperatures
Maximum depth - 12 feet  Surface - 71°F

Principal fisheries: Brook trout, smallmouth bass,
chain pickerel, white perch

Big Concord Pond is well suited for warmwater fisheries
management. Recent netting and scuba surveys showed
excellent smallmouth bass, chain pickerel and white perch
populations present. Although white perch are highly prolific
and can seriously compete with the bass, the large numbers of
these young perch also provide an excellent forage base for
smallmouth bass and chain pickerel.

Experimental stocking of large fall fingerling brook trout has
recently been initiated to provide a limited winter fishery
for brook trout which is generally lacking in this region.
