

ESCUTASIS LAKE
Lowell and Burlington Twps., Penobscot Co.
U.S.G.S. Saponac and Winn, Me.

Fishes

Smallmouth bass
White perch
White sucker

Minnows
Lake chub
Redbreast sunfish

Physical Characteristics

Area - 876 acres

Temperatures

Surface - 72° F.

Maximum depth - 40 feet

30 feet - 65° F.

Escutasis Lake is a rocky, generally shallow lake in the headwaters of the Passadumkeag River. You can drive to the pond over a good gravel road from East Lowell village.

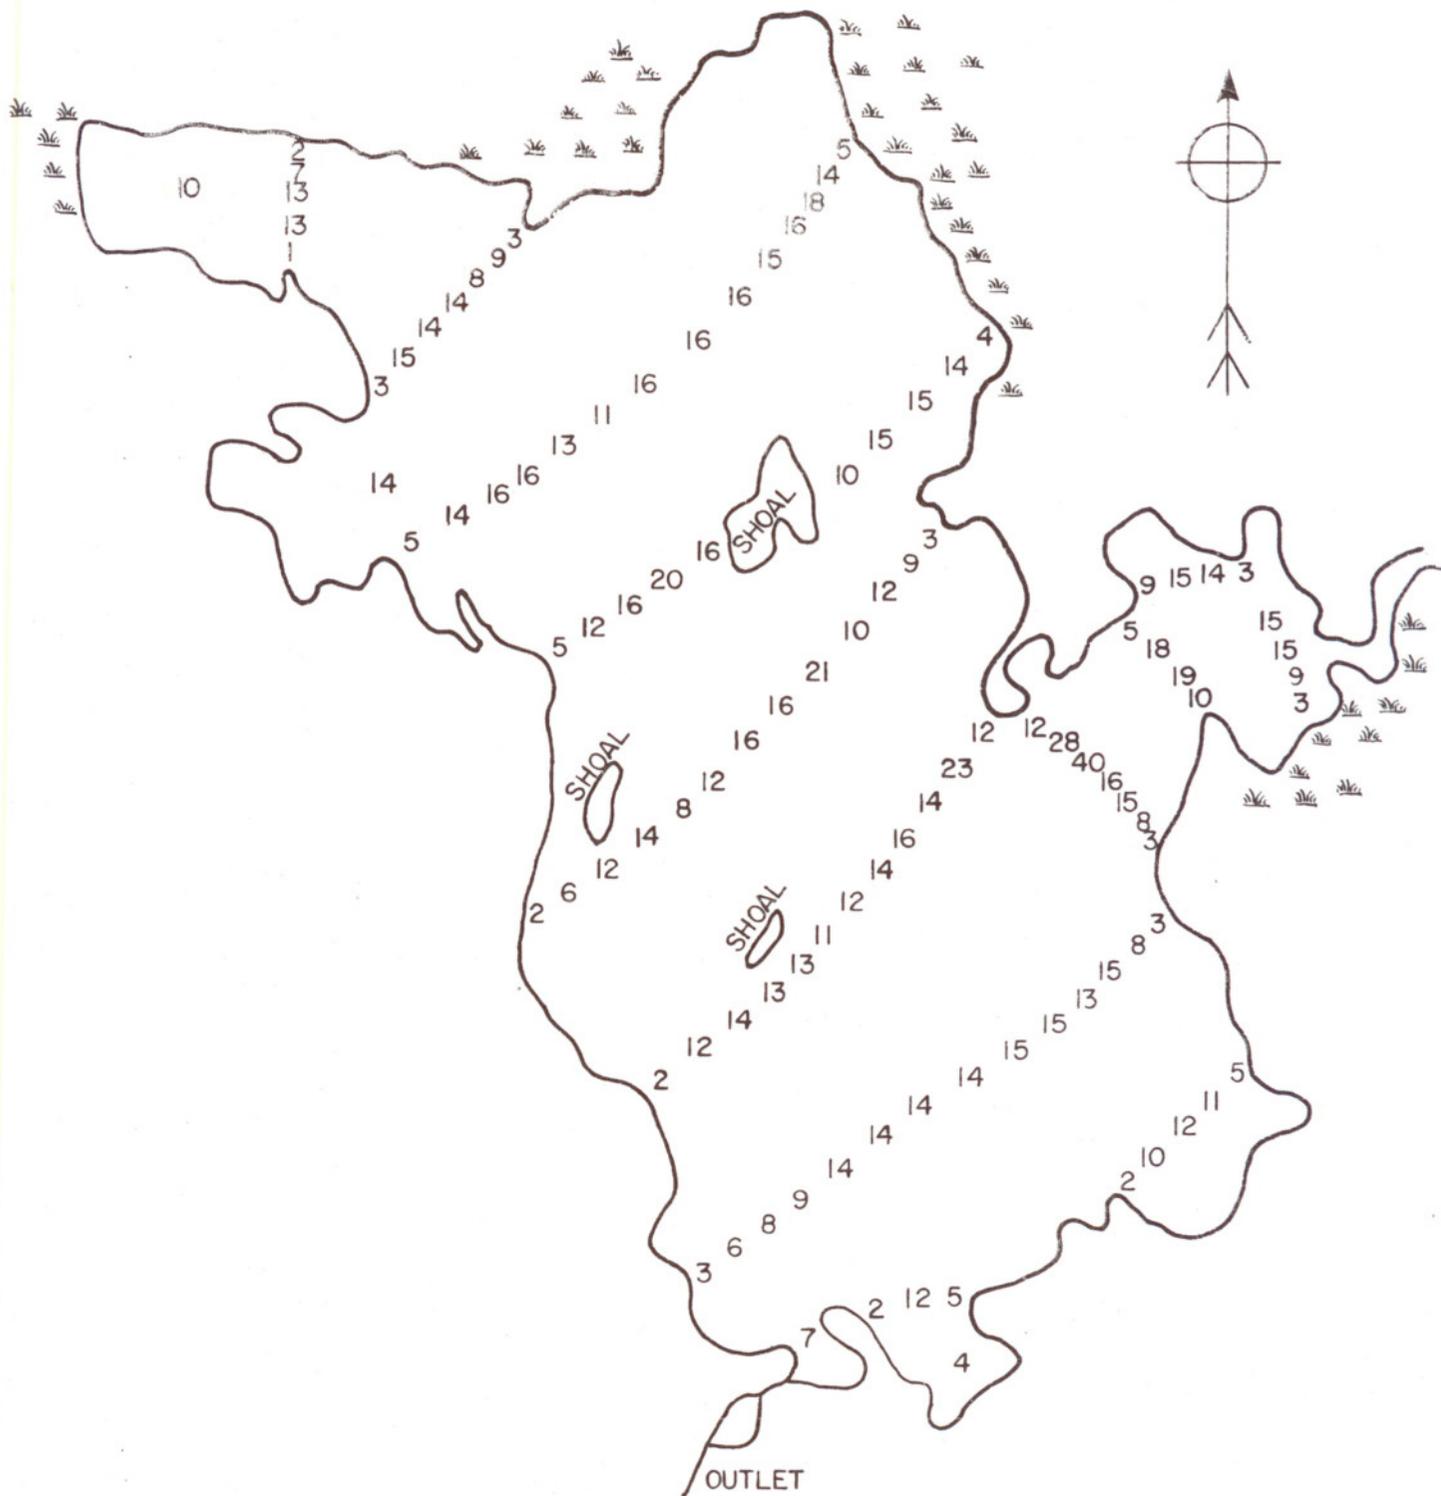

Escutasis Lake supports a dense population of warmwater fish, particularly white perch. The bass and white perch should provide a continuing good sport fishery.

From time to time there has been interest in establishing a coldwater game fishery in the lake by stocking. It is not likely that salmon, brook trout, or brown trout could be established successfully in the lake in the teeth of so much competition from warmwater fish. The one tiny, cold, deep hole near the northeast shore is very small in relation to the size of the lake.

No stocking is recommended at the present time.

Surveyed - August, 1962
