Golden shiner
White sucker
Hornpout (bullhead)
Green sunfish
Pumpkinseed sunfish
Bluegill

Physical Characteristics
Area - 12 acres
Maximum depth - 12 feet
Temperatures
Surface - 72°F
10 feet - 65°F

Trout Pond is accessible via Route 154 east of Brighton. The pond open to fishing under general law in the summer and closed to ice fishing, but with private ownership anglers should ask permission before fishing.

Trout Pond is located between the villages of Brighton and Wellington. A dam was built at the outlet in the early 1900's to increase the size and depth of the pond. Two inlets enter from the north and its outlet, Grant Brook, flows south toward Great Moose Pond. The pond is privately owned and lightly developed.

Water quality in Trout Pond is marginal for coldwater gamefish. Although brook trout were observed in the main tributary, none were found in the pond during the original survey. Heavy competition from the many warmwater fish species makes survival difficult for salmonids. Large areas of aquatic vegetation make good warmwater fish habitat.

Surveyed - July, 2002
Maine Department of Inland Fisheries and Wildlife Funded in part by the Federal Aid in Restoration Act under Federal Project F-28-P L0525D
