Fishes

Yellow perch          Hornpout (bullhead)
Chain pickerel       American eel
White sucker

Physical Characteristics

Area - 26 acres        Temperatures:
Maximum depth - 12 feet    Surface - 75\degree F
                                10 feet - 65\degree F

Principal fishery: Chain pickerel

When Colby Pond was originally surveyed it was much larger and deeper, but since the failure of the old rock dam this pond has become more of a bog. Bog-type plants ring the shoreline and are very numerous. In 1981, biologists visited the pond to update water quality information and found it difficult to reach the water. At that time maximum depth was only 3 feet. Colby Pond is now only a ‘wide spot’ in the stream.

Surveyed - July, 1966
Revised - 1998
