

LEDGE POND

Montville Twp., Waldo Co.
U.S.G.S. Liberty, Me. (7.5')

Fishes

Largemouth bass	Creek chub
Yellow perch	White sucker
Chain pickerel	Hornpout (bullhead)
Minnnows	Pumpkinseed sunfish
Golden shiner	American eel

Physical Characteristics

Area – 23 acres

Temperatures:

Surface – 75°F

Maximum depth - 13 feet

13 feet – 75°F

Principal fisheries: Largemouth bass, chain pickerel

Ledge Pond is a small shallow pond best suited for warm water fishery management. Water temperatures are homothermous during the summer months. Largemouth bass and chain pickerel are the predominant fisheries. Local anglers interested in creating a largemouth bass fishery sparked the transfer of bass by the Department in 1973. The transfer was successful as natural reproduction was observed in 1979, and largemouth bass are providing a good fishery.

There is no public access to Ledge Pond, but anglers can obtain landowner permission. For this reason canoes and kayaks are the best choice for anglers.

Surveyed – July, 1955
