

BRIMSTONE POND
Arundel Twp., York Co.
U. S. G. S. Kennebunk, Me.

Fishes

Minnows

Brook trout (squaretail)
Chain pickerel
Yellow perch
Hornpout (bullhead)

Physical Characteristics

Area - 12 acres

Temperatures

Surface - 78° F.
7 feet - 69° F.

Maximum depth - 7 feet

Principal Fishery: Pickerel, brook trout

Brimstone Pond is a shallow warm water pond. The surface is largely covered by floating vegetation. Undesirable water quality precludes intensive management for coldwater fishes; however, an annual stocking of catchable-size brook trout has provided a satisfactory, short-term spring fishery.

It is recommended that Brimstone Pond be managed for the warm-water fish already present and in order to provide a trout fishery in an area that does not have many natural trout waters, it is also recommended that the usual stocking of brook trout continue.
