Maine Breeding Bird Safe Dates

The Safe Dates delineate the time period in Maine when most migrants are not present and individuals present in appropriate breeding habitat may be nesting. For many species, breeding occurs outside of these dates, but migrant individuals may also be present. Safe dates offer only general guidance and your observations take precedence over any dates given in this Appendix. Remember that spring can be early or late in a given year and that breeding may begin weeks earlier in southern Maine than in northern Maine.
