# STATE OF MAINE CRASH & HIGHWAY FACTS

## 2022 EDITION

### Preface

This publication is a statistical review of reported motor vehicle highway crashes in Maine during the five-year study period 2018 - 2022. The statistics are compiled from crash reports submitted to the Department of Transportation by the Traffic Division, Department of Public Safety. The Traffic Division receives all police uniform crash reports Form 13:20 A, from state, county and local police agencies.

The enclosed charts, graphs, listings and summaries were produced using the Department of Transportation's Computerized Crash Records System. Fatalities data was provided by the Department of Public Safety. Except for adjustments to locations and crash-type information for accuracy, no attempt has been made to modify the raw data received from the reporting agencies. However, because crash scenes are often dangerous and chaotic, some inaccuracies in data collection are possible.

A comparison of this report with other summaries of crashes and fatalities may also reveal inconsistencies due to changes in crash classification, late submittals, and differing reporting criteria. Fatalities data is provided by the Department of Public Safety and does not include deaths that were later determined to be of natural causes.

The Department of Transportation and the Department of Public Safety wish to express our sincere thank you to all law enforcement agencies and officers for the work they do on crash investigations. Without their dedication, this report would not be possible.

<b>8) SIGNALIZED INTERSECTIONS</b>	9,998		15,508.68		0.64	

The Statewide Crash Summary is the total for all identified crash locations and does not include non highway crashes or those crashes where the crash location could not be properly identified.

The Statewide Travel Summary shows the number of Vehicle Miles of Travel for the three-year period 2020-2022 expressed as hundred million vehicle miles of travel (HMVM) except for signalized intersections which is expressed as million entering vehicles (MEV).

The Statewide Crash Rate Summary shows the average rate of crashes for each Functional Classification by Urban/Rural categories. The Crash Rate is determined by dividing the crashes by the amount of travel.

The Signalized Intersection total is the number of crashes which occurred at all signalized intersections in the State.

(K) = Fatal Injury Crash. A crash where the highest level of injury to any person involved in the crash is a fatal injury, which results in death within 30 days of the crash.

(A) = Serious Injury Crash. A crash where the highest level of injury to any person involved in the crash is a serious injury, which prevents the injured person from walking, driving or normally continuing the activities the person was capable of performing before the injury occurred.

(B) = Minor Injury Crash. A crash where the highest level of injury to any person involved in the crash is a minor injury, which is evident to observers at the scene of the crash in which the injury occurred.

(C) = Possible Injury Crash. A crash where the highest level of injury to any person involved in the crash is a possible injury, which is any injury reported or claimed which is not a fatal injury, serious injury or minor injury.

(PDO) = Property Damage Crash. A crash where no injury occurred and only damage occurred to property that reduces the monetary value of that property. No injuries.
