

UNIFORM INFORMATION DISCLOSURE LABEL for

**Standard Offer Service provided by Constellation Power Source Maine, LLC.
(Meets or Exceeds Maine's 30% Eligible Resource Requirement)**

Residential & Small Commercial Class
July 2002

Generation Price: Standard Offer price in effect March 1, 2002 to February 28, 2005 is 4.950 ¢ per kWh.

Power Sources:

Demand for this electricity product was assigned generation from the following sources:

Note: For purposes of meeting the 30% Portfolio Requirement, 64.3% of Coal resource meets the Eligible Resource Requirement of MPUC Chapter 311.

Biomass	11.3%
Coal	18.2%
Hydro	10.3%
Nuclear	26.0%
Natural Gas	6.5%
Solar	0%
Oil	26.3%
Other Renewables	0%
Municipal Trash	1.4%
Wind	0%

Air Emissions:

Carbon dioxide (CO₂), nitrogen oxide (NO_x), and sulphur dioxide (SO₂) emission rates from these sources, relative to the regional average:

LABEL DESCRIPTION

Generation Price: Residential & Small Commercial C& I Standard Offer rate effective March 1, 2002 to February 28, 2005 is 4.950 ¢ per kWh.

Power Sources: The actual electricity you use will be indistinguishable from the electricity used by your friends and neighbors. There is no way to identify the actual power plant that produced the electricity you consume in your home because everyone is served through the same transmission and distribution system. But it is possible to track the dollars you pay for electricity. Your electricity dollars will support electricity generation from various energy resources in the proportions listed on the power content label.

Emissions: Emissions for each of the following pollutants are presented as a percent of the regional average emission rate. Carbon Dioxide (CO₂) is released when certain fuels are burned. It is considered a greenhouse gas and a major contributor to global warming. Nitrogen Oxides (NO_x) form when certain fuels are burned at high temperatures. They are considered contributors to acid rain and ground-level ozone (or smog). Sulfur Dioxide (SO₂) is formed when fuels containing sulfur are burned. Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease. The production of electricity can produce other harmful emissions and have other environmental impacts. Environmental impacts differ among individual power plants.
