

2025 Gas Utility Operator Leak Report Pursuant to Public Law 2025, chapter 217 (LD 1473)

Submitted to the Joint Standing Committee on
Energy, Utilities and Technology

March 31, 2026

Maine Public Utilities Commission
18 State House Station,
Augusta, ME 04333

During the First Special Session of the 132nd Legislature, Public Law 2025, chapter 217 (Act) was enacted. The Act requires each gas utility to provide a report to the Maine Public Utilities Commission (Commission) that includes:

1. The number of natural gas leaks identified by the gas utility;
2. Street location information for the identified natural gas leaks; and
3. The actions taken by the gas utility to address the natural gas leaks.

The Act also requires the Commission to submit the information provided by the gas utilities in an annual report to the joint standing committee of the Legislature having jurisdiction over utility matters.

Operators are required to provide monthly reports of system leaks. The Act requires that the leak reports are publicly available on the Commission's Gas Safety Program Webpage. By April 1, 2026, these reports can be accessed at: <https://www.maine.gov/mpuc/safety/natural-gas-safety>.

The following is the leak information received by the Gas Safety Division of the Commission from the gas utilities operating in the State in 2025.

<u>Section Notes</u>			
<p>* Remedial Measures by Tightening or Lubricating: Small above-ground leaks may be caused by a loose threaded connection and can often be repaired by tightening. Some components of a gas system require lubrication, including valves, actuators, and regulators, which may resolve some small leaks.</p>			
<p>** Replaced Tee: A tee is a pipe fitting that allows for branch connections. Occasionally, leaks may occur where fittings connect to a piping system.</p>			
<p>*** Replaced Regulator: A regulator is a device that limits the gas pressure that enters a segment of the piping system. Regulators on customer services often include integral relief devices to protect downstream piping in case of device malfunction. Leaks may also occasionally occur at connections between the devices and piping systems.</p>

<u>Section Notes</u>			
<p>**** Monitor: Federal and State Pipeline Safety rules require operators to periodically monitor non-hazardous leaks if immediate repairs are not made. If monitoring reveals that leaks have reached specific thresholds and/or have become hazardous, repair or replacement activity is required until the leak is resolved.</p>
