

RESIDENTIAL AND SMALL NON RESIDENTIAL STANDARD OFFER SERVICE CONSUMER INFORMATION ABOUT YOUR ELECTRICITY SUPPLY

April 2022

Electricity suppliers in Maine must, by Maine law, provide fact sheets, or “uniform disclosure labels” from time to time to educate consumers about their electricity service. Your electricity is *delivered* by Central Maine Power Company, but the electricity itself is supplied by:

NextEra Energy Power Marketing, LLC (34%)
New Brunswick Energy Marketing Corporation (33%)
Constellation Energy Commodities Group Maine, LLC (33%)

This fact sheet provides consumer information about the power sources and air emissions of service provided by these electricity suppliers.

Power Sources

(July 1, 2020 – June 30, 2021)

This supplier provided electricity with the following resources:

	<u>Supplier's</u> <u>Mix</u>	<u>New England</u> <u>Mix</u>
Biomass	8.3 %	4.2 %
Municipal Waste	5.2 %	3.0 %
Fossil Fuel Cogeneration	0.0 %	0.1 %
Fuel Cells	0.5 %	0.5 %
Geothermal	0.0 %	0.0 %
Hydro	11.8 %	6.0 %
Solar	6.0 %	4.9 %
Tidal	0.0 %	0.0 %
Wind	5.7 %	3.5 %
Nuclear	9.4 %	25.5%
Gas	46.9 %	46.0 %
Oil	5.4 %	5.5 %
Coal	0.8 %	0.7 %
TOTAL	100.0 %	100.0%

Air Emissions

(July 1, 2020 – June 30, 2021)

This table compares air emissions from this supplier's electricity mix to average emission levels from all New England power sources.

	<u>Supplier's</u> <u>Mix</u> (lbs/MWh)	
Carbon Dioxide (CO₂)	786.29	This is 2.83% higher than the New England Average.
Nitrogen Oxide (NO_x)	0.70	This is 10.02% higher than the New England Average.
Sulfur Dioxide (SO₂)	045	This is 20.21% higher than the New England Average.

*Notes: lbs/MWh = pounds per Megawatt-hour
1 Megawatt-hour = 1,000 kilowatt-hours*

Additional Information and Required Notes:

Notes:

Power Sources—Maine law requires retail electricity providers to periodically provide information to their customers on the mix of power sources used by the provider to serve their Maine customers' load.

Emissions—**Carbon Dioxide** (CO₂) is released when certain fuels are burned. It is considered a greenhouse gas and a major contributor to global warming. **Nitrogen Oxides** (NO_x) form when certain fuels are burned at high temperatures. They are considered contributors to acid rain and ground-level ozone (or smog). **Sulfur Dioxide** (SO₂) is formed when fuels containing sulfur are burned. Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease. The production of electricity can produce other harmful emissions and have other environmental impacts. Environmental impacts differ among individual power plants.

If you have questions or need further explanation, please call the Maine Public Utilities Commission, toll-free, at 1-800-452-4699. Additional information can also be found at <http://www.maine.gov/mpuc>.
