State of Maine: County and Municipal Law Enforcement Officers & Municipal Firefighters Retiree Healthcare Plan – Other Postemployment Benefit Valuation Report

BACKGROUND AND COMMENTS

The Government Accounting Standards Board released the Statements of Governmental Accounting Standards No. 43 (“GASB 43”) and No. 45 (“GASB 45”) in 2004. These statements require trusts (GASB 43) and employers (GASB 45) to accrue the cost of “Other” Post-Employment Benefit (OPEB) Plans while employees who will receive these benefits are providing services to the employer. For state or local government units whose annual revenues exceed \$100 million, GASB 45 had to be adopted no later than the first fiscal year beginning after December 15, 2006. For the State of Maine, we understand that the State decided to adopt GASB 45 effective with the fiscal year beginning on July 1, 2007 (Fiscal 2008). The purpose of this report is to provide the information required under GASB 45 to be disclosed on the State’s financial statements for the financial period ending June 30, 2015.

This report is not intended to comply with GASB No. 43.

Plan Overview

The State of Maine provides a Retiree Healthcare Plan (“Plan”) for County and Municipal Law Enforcement Officers & Municipal Firefighters (referred to as “First Responders”). These state-provided benefits became effective July 1, 2007. To be eligible for payment, a retiree must:

- Be at least age 50;
- Be receiving a retirement benefit through the Maine Public Employees Retirement System (or a defined contribution plan);
- Have made at least 5 years of employee contributions into the Firefighters and Law Enforcement Officers Health Insurance Program Fund*.

* The mandatory contribution requirements (1.50% of compensation) for active employees became effective January 1, 2007. Retirees who did not satisfy the minimum of 5 years of contributions were permitted to pay a make-up contribution in order to qualify for the benefit.

The State contributes:

- 45% of the retiree-only medical premium for municipal employers participating in the Maine Municipal Employees Health Trust (“MMEHT”);
- 45% of the retiree-only medical premium for municipal employers not participating in the MMEHT (i.e., which is assumed to be 45% of half the 2-party premium for retirees in the State Employees Health Plan with 2-party or family coverage), but not greater than 45% of the highest MMEHT retiree-only premium for the medical plans elected by the participating municipalities.

State of Maine: County and Municipal Law Enforcement Officers & Municipal Firefighters Retiree Healthcare Plan – Other Postemployment Benefit Valuation Report

Retirees pay the remaining portion of the retiree-only premium and the full additional premium for spouse and family coverage. There is no benefit for surviving spouses. The State-paid retiree medical payments cease when the retiree becomes eligible for Medicare. NOTE: Medicare is mandatory for police officers and firefighters hired after March 31, 1986. The substantive plan of benefits is described in Section VII of this report.

Health Care Reform

The Patient Protection and Affordable Care Act (“PPACA”) was signed into law on March 23, 2010. The primary objective of the act is to increase the number of Americans with health insurance coverage. There are several provisions within PPACA with potentially significant short- and long-term cost implications for employers. The provisions of PPACA applicable to retiree health benefits were considered in this valuation.

The provisions of PPACA considered and included in the development of expected claims costs are as follows:

- prohibiting lifetime and annual limits on the dollar value of coverage for “essential health benefits”;
- increasing the dependent child age limit to age 26; and
- elimination of cost sharing for in-network preventative services.

We also considered the expected costs associated with the excise tax on “Cadillac Plans” effective in 2018. Due to the expectation that the medical trend rate will significantly exceed inflation over the long-term, most retiree health plans will be affected by the excise tax at some point in the future. After adjusting the thresholds for the age and gender characteristics of the State’s policy holders, the excise tax is not projected to have an impact on the liabilities.

Medicare Part D Subsidy

Consistent with the GASB Technical bulletin and to the extent applicable, our determination of the actuarial accrued liability and the “annual required contribution (“ARC”) does not reflect the impact of any “28%” Federal reimbursements that may be obtained as a result of providing post-65 prescription drug benefits from the Plan.

Actuarial Methods and Assumptions

The actuarial methods and assumptions are described in Section VI of this report.

The majority of the assumptions used in the actuarial valuation of the Retiree Health Plan are selected to be consistent with the most recently available active lives actuarial valuation of the Maine Public Employee Retirement System (“MainePERS”).

State of Maine: County and Municipal Law Enforcement Officers & Municipal Firefighters Retiree Healthcare Plan – Other Postemployment Benefit Valuation Report

The State of Maine has elected to use a discount rate of 4%. Since the State's retiree health program is not being funded by assets in a separate trust, GASB 45 requires that the discount rate be based on the estimated long-term investment yield on the general assets of the State. The 4% discount rate represents the expected long-term rate of return on the assets expected to be used to pay plan benefits.

Claim costs were developed using current premiums without any age-adjustments since we assumed that the individual municipalities – not the State of Maine – are responsible for any implicit subsidy.

This is the second year of a two-year biennial valuation period. This valuation was based on the same participant data, plan provisions and actuarial methods and assumptions as the previous valuation.

ACTUARIAL VALUATION OPINION

This report presents results of the actuarial valuation of the “Other” Post-Employment Benefits (OPEB) provided under the State of Maine Retiree Healthcare Plan for “First Responders” as of June 30, 2014. In our opinion, this report is complete and accurate and represents fairly the actuarial position of the Plan for the purposes stated herein.

In preparing this report, we have relied upon information regarding plan provisions, plan financial information and plan participants provided by the State of Maine. Plan participant information is as of June 30, 2013. The actuary has analyzed the data and other information provided for reasonableness, but has not independently audited the data or other information provided. Estimates were made where data was missing or unavailable but we believe that the cost impact of such estimates (if any) were not material. The actuary knows of no further information that is essential to the preparation of the actuarial valuation.

Actuarial information under Government Accounting Standards Board Statement No. 45 (“GASB 45”) is for purposes of fulfilling employer financial accounting requirements. The results have been made on a basis consistent with GASB 45 and are based upon assumptions selected by the State of Maine. Determinations for purposes other than meeting employer financial accounting requirements may be significantly different from the results reported herein.

In our opinion, all costs, liabilities, rates of interest, and other factors under the Plan have been determined on the basis of actuarial assumptions and methods, which are each reasonable (or consistent with authoritative guidance) taking into account the experience of the Plan and future expectations and which, when combined, represent our best estimate of anticipated experience under the Plan.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operations of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law.

Our scope did not include analyzing the potential range of such future measurements, and we did not perform that analysis.

The undersigned with actuarial credentials collectively meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein.

Section II - Development of Net OPEB Obligation and Annual OPEB Expense

GASB No. 45 requires the disclosure of the annual OPEB expense. The following is a brief explanation of the components of the OPEB expense:

- **Actuarial Cost Method:** Is the procedure by which the actuarial valuation attributes the total present value of benefits to the years of an employee's service. There are six permissible actuarial cost methods under GASB 45. See Section VI for more details.

- **Actuarial Accrued Liability (AAL):** The portion of the total present value of benefits attributed to employee service in fiscal years preceding the current fiscal year. For those currently receiving payments, 100% of the total present value of benefits is attributed to service in prior fiscal years.

- **Amortization Payment:** Amortization of the unfunded actuarial accrued liability. The initial unfunded AAL is amortized as a level percent of payroll over a closed 30 year period. Gains and losses are amortized as a level percent of payroll over a rolling 15-year period.

- **Net OPEB Obligation:** Cumulative difference between the OPEB expense and contributions and/or benefits paid.

Section VI - Summary of Actuarial Methods and Assumptions

Actuarial Methods

The actuarial cost method used for this valuation is the Entry Age Normal (EAN) cost method. Under the EAN cost method, the gross Normal Cost for each participant is determined as a level percent of payroll throughout the participant’s working lifetime. For this Plan, the Normal Cost for the year is the sum of the gross Normal Costs determined for each participant reduced by the expected contributions by employees during the year.

Funding Policy

The State is currently funding the Plan on a pay-as-you-go basis. This valuation assumes the State will continue this policy.

Actuarial Assumptions

- Discount Rate
 - 4.0%, representing the expected long-term rate of return on the assets expected to be used to pay plan benefits.
