MEMORANDUM

Date: December 17, 2014

To: Highway Program Construction Staff

From: Scott Bickford, Assistant Program Manager

Subject: Retention of Millings

If the Department has a pugmill project slated for construction within the next 5 years that needs material, the Department may keep up to 100% of the millings to complete that work. If the Department has an identified pugmill candidate in the area that does not have an identified timeframe and needs material, the Department may keep up to 50% of the millings to complete that work. If the Department does not have an identified pugmill candidate, the Department will keep 0% of the millings.

See the following examples for clarification:

Example 1: 10,000 CY of millings are needed to complete a pugmill project within the 5 year period. Up to 100% of the millings from the project can be kept by the Department to obtain the required 10,000 CY necessary for the pugmill project.

Example 2: There is a future pugmill project that will be constructed more than 5 years in the future. The Department can keep up to 50% of the millings and the rest would be the property of the Contractor.

Example 3: There are no future pugmill projects in the area. The Contractor would keep 100% of the millings.
